Culture mechanics

culture mechanics *noun*

Status: proposed theoretical term

Field: moral psychology (psychology of morality), social psychology, cultural psychology, organizational psychology, organization studies, sociology of morality, sociology of culture, cultural theory, distributed cognition

Short definition

Culture mechanics is a proposed framework for explaining how culture is installed in people, activated in particular situations, synchronized across groups, reproduced through institutions, and deliberately or accidentally changed.

It describes the human being as **homo duplex**, a creature with two functionally distinct processing units. The first is a powerful, general-purpose processor: the brain's main CPU. The second is a simpler social and affective processor called the **bigOther**. The bigOther does not reason in detail. It classifies thoughts, persons, actions, and situations by attaching culturally learned sentiments to them: honour or shame, loyalty or betrayal, sacredness or pollution, legitimacy or illegitimacy, belonging or exclusion.

Although the bigOther is comparatively primitive, it is connected at a decisive point. By changing how a person *feels* about what the main processor is thinking, it can redirect attention, motivation, judgment, and action before conscious reasoning notices what has happened. It is programmed slowly with a **mythological lens** and activated quickly by social signals. In terminology adapted from Systems Leadership, a **mythology** is one socially evaluated narrative or story. Many mythologies, reinforced by symbols, rituals, institutional practices, rewards, punishments, and exemplary behaviour, shape the lens through which the bigOther maps real-world observations and events onto culturally learned values and feelings.

The **single-slot principle** proposes one local bigOther executing one operative mythological lens. That lens may braid several compatible cultural packages into a complex program; it is not a hierarchy of parallel bigOthers. An incompatible governing worldview must be rejected, or the incumbent weave must be unbraided sufficiently for one successor to be rebraided and installed.

Stable installation means **complete slot occupancy** or, in a neutral architectural sense, **full capture**. A first-order program and a lifted second-order meta-program can each fully occupy the one slot. A lifted program does not govern less. The order-level distinction concerns what is shared: first-order mechanical solidarity shares concrete rules and answers; lifted mechanical solidarity shares the rules that generate, select, apply, and revise concrete answers. Plural lives and bounded subordinate jurisdictions can follow from that architecture, but do not define it. Whether either form of full capture is open and corrigible or closed and pathological is a separate question.

The bigOther also has a special capacity: it can couple with the bigOthers of other people. It encodes its classifications in words, stories, gestures, roles, titles, symbols, and sanctions that are intelligible within a shared symbolic order. Reciprocal signalling can synchronize many locally programmed individuals into an emergent social field and, under sufficiently integrated conditions, a distributed **multi-mind-self**. Culture is the relatively stable evaluative programming and social coordination produced and reproduced through this loop.

A multi-mind-self need not erase the persons through whom it acts. Culture mechanics therefore distinguishes **differentiated unity**, in which a real *we* preserves different functions, judgments, relationships, and legitimate jurisdictions, from **subjecthood absorption (fusion)**, in which those personal standings are increasingly denied against the collective. Collective agency, synchronization, and fusion are related but independent properties.

Some ideological symbols are **conformity signals**: their performance, absence, or refusal makes a person's relation to the installed program publicly legible. Such signals can turn private classification into monitoring, apparent consensus, recruitment, moralized exclusion, institutional coercion, or collective action. A conformity signal can also become a **targeting signal** when nonperformance exposes a sanctionable outsider; imposed marks and attributed labels can make the same target classification legible without requiring refusal.

In one sentence:

Culture mechanics is the study of how mythologies shape the mythological lens, how the bigOther uses that lens to give social feeling to observations and thoughts, and how networked bigOthers turn those feelings into collective order and action.

Long definition

1. General meaning

Culture mechanics is an explanatory model of culture as a **distributed system of sentiment classification, social coordination, and symbolic reality-construction**.

The term *mechanics* expresses a specific ambition. Culture mechanics does not stop at naming or classifying phenomena such as conformity, indoctrination, collective effervescence, moral commitment, ideology, group identity, or crowd behaviour. It asks how these phenomena are produced:

- What are the functional components?
- What information or programming does each component contain?
- How is that programming learned?
- Which signals activate it?
- How does it influence thought and action?
- How are separate people coordinated or synchronized?
- How is the resulting culture stabilized by rituals and institutions?
- Under what conditions can it be inspected, resisted, or reprogrammed?

Culture mechanics therefore treats culture not merely as a collection of customs or beliefs, but as an operative system with inputs, internal state, evaluative rules, affective outputs, communication channels, feedback loops, and institutional memory. This entry begins with the individual source and coupling interface. The emergent field and its back-action upon epistemic judgment are developed in [Epistemic Agency under Mechanical Solidarity](#).

2. Homo duplex: the dual-processing human

The model calls the human being **homo duplex** because human conduct results from the interaction of two functionally different processing units.

This is a deliberate extension of Émile Durkheim's term rather than a claim that Durkheim described precisely this architecture. In culture mechanics, the duality is between:

1. a powerful general-purpose processor; and
2. a simpler, culturally programmable sentiment-classification processor.

The two units are connected but not reducible to one another within this theory. This is a constitutive functional commitment, not a claim that two anatomical organs have been discovered. The bigOther must therefore not be silently redescribed as merely System 1, a generic heuristic, the superego, internalized norms, or an output of ordinary cognition. Those concepts may illuminate aspects of its operation, but none replaces the proposed second component without revising the theory itself.

A person's intelligence, knowledge, or technical competence does not by itself reveal how the person's bigOther is programmed. The main CPU may remain intelligent, computationally powerful, and capable of elementary verification while the bigOther changes which conclusions feel admissible, honourable, shameful, safe, or unthinkable. Conversely, a person's cultural programming does not determine the full extent of the person's intellectual capacities.

This relative independence explains why a highly intelligent person may be strongly governed by ideological or religious classifications, while a person of ordinary intelligence may preserve considerable moral and epistemic independence. The main processor determines much of what a person *can* think; the bigOther strongly influences which thoughts feel admirable, shameful, safe, dangerous, permissible, or unthinkable.

3. First processing unit: the main CPU

The **main CPU** is the brain's powerful, flexible, general-purpose processing capacity. Its functions include:

- perception and memory;
- language and explicit thought;
- comparison and inference;
- imagination and counterfactual reasoning;
- planning and problem-solving;
- conscious deliberation;
- personal judgment;
- construction of explanations.

Most ordinary conceptions of intelligence focus on this processor. It can learn complex theories, solve technical problems, interpret evidence, and devise sophisticated strategies.

The main CPU does not, however, choose its direction in a cultural vacuum. Attention, motivation, felt relevance, moral urgency, and the acceptability of possible conclusions are influenced by the second processor.

4. Second processing unit: the bigOther

The **bigOther** is the comparatively primitive but strategically placed sentiment-classification processor. Culture mechanics distinguishes its functional operation, its phenomenological appearance, and the shared symbolic interface through which it couples with other local bigOthers.

Functional aspect The local bigOther executes the installed mythological lens. It does not usually produce a detailed argument. It assigns social and moral valence to observations, thoughts, persons, sources, roles, actions, symbols, and events:

This mapping function corresponds to what **Systems Leadership** calls the **mythological lens**. Culture mechanics treats the lens as the installed evaluative program and the local bigOther as the comparatively simple processor that executes it. Its output can take the form of pride, guilt, shame, disgust, trust, fear, admiration, moral elevation, indignation, belonging, or anticipated exclusion. These outputs alter which thoughts receive attention, which possibilities are emotionally tolerable, and which actions feel obligatory.

Phenomenological aspect The source of a classification need not be experienced as “my learned social programming.” It may be encountered as an actually present Other—God, Destiny, Nation, History, the People, or the Cause—that sees, judges, addresses, commands, and can receive loyalty, service, protection, or sacrifice. Culture mechanics calls the felt objectivity of this encounter **bigOther-presence** and its second-person relational form **bigOther-as-Thou**.

When the installed program is jealous, this presence may itself be felt directly as jealous: as a *Thou* that claims the person, watches for disloyalty, refuses divided allegiance, and demands fidelity against rivals. The person need not experience this as “my program classified an alternative attachment as betrayal.” It can be lived as “the Other is jealous and requires my loyalty.”

[William James’s *The Varieties of Religious Experience* \(1902\)](#) supplies an important phenomenological antecedent: persons can experience an unseen order or objective presence as more authoritative and conduct-directing than an explicit proposition. [Martin Buber’s *I and Thou* \(1923\)](#) supplies the relational grammar of encountering another as a *Thou* rather than an object or *It*. Neither thinker proposed the culture-mechanical processor or its distributed field. Buber’s eternal Thou in particular must not be reduced to a socially programmed classifier. The present terms borrow aspects of their phenomenology while assigning them a different functional explanation.

This account also leaves the metaphysical status of a reported presence open. Its claim is narrower: whatever else the presence may be, the person’s local bigOther can mediate how it becomes socially classified and conduct-directing.

When the mythology represents an agent, several depths of relation and enactment must be distinguished:

Depth	Culture-mechanical description	Relation to fusion
Representation	“This culture tells stories about God, a god, the Nation, History, the People, or the Cause.”	No fusion follows from representation.
Consultation or service	The person asks what the represented agent would judge or accepts obligations toward it.	Personal authorship can remain fully legitimate.
bigOther-as-Thou	The agent is experienced as present, addressing, watching, judging, or commanding the person.	An <i>I–Thou</i> relation still contains two poles; presence is not fusion by itself.

Depth	Culture-mechanical description	Relation to fusion
Distributed enactment	Several persons and institutions provide perception, memory, judgment, voice, resources, and action to the represented agent.	Enactment can remain differentiated or become absorptive.
Fused enactment	The collectively enacted agent becomes the authoritative subject and the person's independent authorship loses standing against it.	This is subjecthood absorption by definition.

The sequence is analytical rather than a necessary developmental ladder. A person can serve without reporting a presence, report a presence without joining a collective agent, or participate in collective enactment while retaining a legitimate conscience, judgment, and right of refusal. Conversely, an intensely agentified programme can make “the Other speaks and acts through me” the operative locus of authorship.

The phrase **agent-model** in this comparison means the culturally specified representation by which people anticipate what an agent perceives, remembers, wants, judges, and commands. It is part of the operative mythological lens; it is not another local bigOther. Nor does analysis of a humanly implemented God-model decide whether God exists independently of that implementation. Culture Mechanics can examine the representation, experience, and social enactment while leaving the theological or metaphysical referent open.

Shared symbolic protocol The spelling **bigOther** marks a deliberate adaptation of [Jacques Lacan's big Other](#), the locus of language, law, roles, conventions, authority, and socially intelligible meaning. Culture mechanics does not identify Lacan's symbolic order with a processor inside the individual. It treats that shared order, in one functional translation, as the **on-the-wire protocol** through which local bigOthers become mutually legible:

```

state of A's local bigOther
    ↓ encoded as
words, stories, gestures, roles, titles, symbols, sanctions
    ↓ transmitted through
shared symbolic order / Lacanian big Other
    ↓ interpreted through
B's installed mythological lens
    ↓
B's sentiment classification and outward response

```

An alphabet is not a message, and Unicode or ASCII is not the state of the computer using it. They provide shared encodings through which different machines can exchange intelligible signals. Likewise, a letter such as M can denote a complete mathematical mapping, while E or B can denote an entire field. Flags, uniforms, titles, and words such as *betrayal* or *justice* can function as similarly compressed social tokens because participants have learned how to unpack them.

The protocol transmits public signals, not perfect copies of private states. Synchronization requires sufficiently compatible lenses and contexts; it does not require identical inner contents. A signal can therefore activate convergence, misunderstanding, indifference, or opposition.

The bigOther's power comes less from computational sophistication than from its **position in the control architecture**. It influences how a person feels about the main CPU's thoughts. The main CPU may subsequently use its much greater power to explain, implement, defend, or occasionally question the direction supplied by the bigOther.

Historical cause, live classification, and avowed reason A present cultural response can contain three causally distinct layers:

1. **Historical cause:** the remote social experience, institutional arrangement, selection process, conflict, or practical problem through which a rule and its affective weight arose.
2. **Live classification:** the attraction, horror, shame, sacredness, loyalty, or other sentiment currently executed when the operative lens encounters the object.
3. **Avowed reason:** the explanation a person or institution can presently state for that response.

These layers can coincide, but they need not. The original problem can disappear while an affectively alive prohibition remains; a later theology, science, or political doctrine can then supply a new explanation. Conversely, a person can repeat an inherited reason after its corresponding classification has become affectively dead.

Émile Durkheim supplies a particularly clear observation in “[Les principes de 1789 et la sociologie](#)” (1890; Mark Traugott’s English translation appears in [Émile Durkheim on Morality and Society](#), pp. 34–42). He writes that conscious prescriptions can be “the conscious outcome of an entire unconscious process” and that, without access to their remote causes, “we invent reasons for them, lacking the real ones which we do not see.” His kin-marriage example separates a surviving horror from the religious or physiological explanations later offered for it.

This is testimony to the **phenomenon to be explained**, not proof of the present processor architecture. Implicit learning, habit, affective conditioning, predictive processing, strategic rationalization, and other unitary-mind accounts remain alternatives. A discriminating study should therefore vary or measure the three layers separately: alter an explicit reason while holding the social approval environment roughly constant; alter approval while holding the proposition constant; test whether affective reversal precedes or follows doctrinal revision; and compare people who avow the same reason but display different classifications.

5. The single-slot principle

Culture mechanics proposes that the bigOther occupies the equivalent of a computer’s **single PCI slot**. There is one slot, one installed local bigOther, and one operative mythological lens at a time. The bigOther is the processor or card; the mythological lens is the executable evaluative program it runs.

A stable program produces **complete slot occupancy**. This document also calls that architectural condition **full capture**. Here *full* means that one operative weave governs the slot, not that the weave is false, totalitarian, or uncorrectable. A **first-order full capture** shares binding concrete rules and answers. A **lifted full capture** shares binding rules that generate, select, apply, and revise concrete answers:

fixed meta-rules M + current knowledge or inputs K_t + situation C → binding first-order output R_t(C)

Here *fixed* means installed and binding at a given time, not eternal. Generator and outputs belong to the same operative weave. Both architectures occupy the slot completely; lifting changes the order at which binding sameness is located rather than producing an empty or half-programmed slot.

Four axes must therefore remain distinct: **slot occupancy** (full), **order level** (shared outputs or shared generator), **jurisdiction** (what the installed rules govern), and **corrigibility** (open or closed). A lifted meta-order can have universal jurisdiction at its own level over the creation, allocation, limitation, coordination, succession, and correction of first-order outputs and jurisdictions. Persons, offices, professions, institutions, communities, and contracting parties may remain plural and domain-limited beneath it. That pluralism is an important possible result of lifting, not its definition.

This **single-slot exclusivity** does not imply that the installed program is simple, culturally pure, or derived from only one source. A person may belong to several groups and encounter many religions, professions, political doctrines, familial obligations, and moral traditions. Compatible material can be assembled like software packages or libraries and braided into one operative lens. The slot restricts the number of independently operative evaluators, not the complexity or modularity of the installed weave.

Compatible packages are not separate bigOthers waiting for a higher process to rank them at runtime. Their objects, authorities, roles, and permissions already receive meaning through the one combined weave. **Paul’s pride in supporting himself through work illustrates the point: Christianity and a work ethic need not compete for supremacy.** In [1 Corinthians 9:6–18](#), especially verses 15–18, Paul connects his boast with preaching without making use of his right to material support; [1 Thessalonians 2:9](#) and [2 Thessalonians 3:7–10](#) present labouring so as not to burden the community as an exemplary practice. A Christian mythology package and a *Berufsethos* can therefore reinforce one another within a single program. This is an illustration of compatibility, not population-level proof that every religious and professional package is compatible.

New cultural material consequently has three broad fates:

1. **Incumbent assimilation or rejection:** the installed lens interprets, neutralizes, reuses, or refuses the material in its own terms without surrendering its load-bearing classifications.
2. **Compatible integration:** a package whose important classifications and authority relations can coexist with the incumbent is braided into the one operative lens.

3. **Replacement under incompatibility:** a rival governing program cannot be installed beside the incumbent. The incumbent weave must be loosened and unbraided sufficiently for retained strands and new material to be rebraided into one successor lens.

Within the originating application developed here, **Christianity and the National Socialist worldview are deeply incompatible programming systems** at load-bearing classifications such as God and ultimate authority, the person and neighbour, race and nation, truth, obedience, sacrifice, violence, and loyalty. Nazi programming could not simply be installed beside an intact Christian program. Capture required a replacement process. A Nazi-governed successor could retain Christian words, scripture, symbols, rituals, offices, or a subjective Christian identity, but those strands would receive their operative meaning from the successor weave. The result would be one rebraided Nazi-Christian program, not two programs ordered by rank.

Deep cultural change is therefore unlike adding neutral information to memory. Reprogramming changes the weave that determines what new information means and how it feels. Incomplete replacement can produce contradiction, instability, or a tangled lens during loosening and rebraiding; it does not establish several independent bigOthers running in parallel. This helps explain why conversion, deradicalization, psychoanalysis, moral injury, ideological rupture, and profound changes of identity can be slow, conflictual, and emotionally painful.

Hard cases and possible defeat conditions Single-slot exclusivity cannot be protected merely by redescribing every apparent counterexample as “one complicated braid.” Self-description, retained vocabulary, public ritual, or several group memberships do not decide the architecture. The diagnostic question is:

When inherited authorities conflict over the same act, which rule or authority has final interpretive priority over what the retained material means?

The following observations remain consistent with one slot:

- one tradition interprets the other’s retained symbols and practices;
- outward conformity is strategic camouflage under legal or social coercion;
- selected strands have been integrated into one syncretic successor;
- a third rule governs how both inheritances are combined;
- or the person is in unstable, incomplete unbraiding and rebraiding.

A strong candidate counterexample requires substantially more:

1. two governing evaluators issue incompatible classifications in the same domain;
2. each remains independently final rather than being interpreted, authorized, or limited by the other or by a third rule;
3. each can generate its own affect, guilt, correction, and veto;
4. neither is merely reflective knowledge, role performance, strategic concealment, or a de-animated remnant; and
5. the configuration remains stable over time rather than resolving into hierarchy, integration, replacement, or breakdown.

Evidence of that pattern would count against strict single-slot exclusivity. The theory would then need either a principled account of parallel operative evaluators or revision of the one-slot commitment. Evidence for only labels, rituals, memories, or alternating contexts is insufficient because one weave can assign different outputs to different contexts. The detailed dual-religious- identification boundary case belongs to *Epistemic Agency under Mechanical Solidarity*, “Examples, cases, and boundary tests”.

6. Systems Leadership: mythologies and the mythological lens

Systems Leadership: Creating Positive Organisations, by Ian Macdonald, Catherine Burke, and Karl Stewart, supplies the definitive practical account used by Culture Mechanics for how culture is deliberately implemented. Its method coordinates leadership behaviour, systems, symbols, mythologies, habits, organizational arrangements, and repeated experience rather than treating mythology as sufficient by itself. Culture Mechanics embeds that organizational and workplace account in a larger theory and develops selected extensions and refinements; readers seeking the exact implementation method should read the book.

Culture mechanics adopts the following terminological hierarchy:

Term	Definition in culture mechanics
Mythology	One socially evaluated story or narrative unit. It need not involve gods or supernatural events. It shows persons, roles, actions, conflicts, and consequences while indicating what deserves admiration, shame, loyalty, fear, trust, disgust, or condemnation.
Mythologies	The accumulated and partly interconnected body of such stories available to a person or group. They provide many examples of how the social world is supposed to be interpreted.
Mythological lens	The generalized mapping formed from those mythologies and reinforced by systems, symbols, rituals, sanctions, and observed conduct. It maps real-world observations and events onto culturally learned values and feelings.
bigOther	The local sentiment-classification processor that executes the installed mythological lens and applies its mappings quickly.

The lens is one executable weave but may be modular. Mythologies, practices, professional ethics, familial duties, and local customs can operate as mutually compatible packages within it. Their plurality is a plurality of constituent strands and context-sensitive mappings, not a plurality of local bigOthers.

This yields the central culture-mechanical sequence:

```

MYTHOLOGY
one evaluated story
      ↓
MYTHOLOGIES
many mutually reinforcing stories
      ↓
MYTHOLOGICAL LENS
generalized mappings from observations to values and feelings
      ↓
BIGOTHER
fast execution of those mappings
      ↓
ELEPHANT AND MAIN CPU
felt attraction, aversion, obligation, attention, and motivation

```

An individual mythology can teach:

- which kinds of persons and roles exist;
- what counts as a good group member;
- which authorities are legitimate;
- which conduct receives praise or condemnation;
- which sacrifices are honourable;
- what constitutes betrayal, pollution, injustice, or redemption;
- how the past explains the present;
- what the group expects of the individual;
- which future is desirable or disastrous.

A story acts as an evaluated simulation. Narrative transportation places the listener inside a conflict; a hero or villain demonstrates a possible response; consequences display what follows; praise or condemnation supplies the sentiment label; and the audience's reaction shows whether the classification is collectively shared. Each story is one training example. Many convergent stories allow the bigOther to generalize a lens that can classify new situations never described in any one story.

Relevant structures and moral appraisal Dushan Wegner's *Relevante Strukturen* (2019; ISBN 9783739405636) calls attention to the relations in which a person is embedded and to the larger structures that the person experiences

as important. Culture Mechanics adopts **relevant structure** as a typed relational object rather than as a synonym for anything a person happens to value:

A **relevant structure** is a represented relational arrangement or organized condition—such as a family, friendship, profession, institution, community, legal order, practice, person-in-relation, or anticipated shared future—that the installed mythological lens treats as carrying moral weight.

Not every desired object, isolated preference, or momentarily salient stimulus is therefore a relevant structure. The term emphasizes embedding, dependence, continuity, function, and vulnerability. A mythology can teach which structures exist, who or what belongs within them, how they depend upon one another, what counts as supporting or damaging them, whose claims have precedence when they conflict, and who has standing or jurisdiction to judge and act.

Wegner’s memorable formulation that good strengthens relevant structures and evil weakens them is incorporated as the **relevant-structure appraisal hypothesis**:

People often experience an action, omission, continuation, or proposed change as good when they believe it strengthens, protects, repairs, or honourably serves a structure they experience as relevant, and as evil when they believe it weakens, corrupts, betrays, or destroys such a structure.

This is a descriptive hypothesis about moral perception and mobilization, not a sufficient definition of moral truth and not a claim that every moral judgment uses this route. The analysis must keep five variables distinct:

Variable	Question
Felt relevance	How much moral weight does this person or operative culture assign to the represented structure?
Represented effect	What does the person believe the action will do to it?
Actual effect	What does the action do, including indirect, delayed, and transferred effects?
Generative centrality	How strongly does the structure actually produce capabilities or conditions upon which several downstream structures depend?
Normative standing	Is the structure, claimed effect, jurisdiction, or proposed sacrifice legitimate?

Generative centrality—also described more informally as *load-bearingness*—is therefore not another name for felt relevance. A structure may be causally central to the production of character, knowledge, cooperation, or institutional continuity while receiving little explicit moral attention. Conversely, an intensely felt-relevant structure may be weakly generative, replaceable, or destructive. A **cultural sublimation architecture** is a particularly important proposed case: it can recurrently produce capacities upon which families, professions, law, science, markets, and political institutions depend even when the operative culture does not represent that architecture itself as relevant. The concept and its limits are developed in *Mythology Construction*, “Sublimation and moral formation.”

The mismatch is analytically consequential:

high generative centrality
+ low felt relevance
→ weak protection and transmission
→ vulnerability to neglect, ridicule, dismantling,
or consumption of inherited cultural capital

This is a hypothesis about dependency and reproduction, not a presumption that every inherited arrangement is beneficial or that whatever calls itself civilizational must be preserved.

Wegner’s emphasis on *Veränderung* also motivates the more limited **change-indexed moral-mobilization hypothesis**:

Moral classification often becomes especially salient and action-directing when a condition is represented as causing, accelerating, continuing, preventing, or culpably failing to prevent a change in a felt-relevant structure.

This concerns represented counterfactual movement, not physical novelty. “The rule exists” can be rendered as “officials continue the rule,” “participants decline to end it,” or “the institution prevents transition to an alternative.” Conversely, the absence of visible mobilization does not establish that the status quo is experienced as good:

coercion, habituation, helplessness, low salience, concealed dissent, and the absence of a represented alternative are competing explanations. A direct test would hold material conditions constant while comparing a static-state description, an active-continuation description, and a prevented-alternative description. Failure of these descriptions to alter moral intensity or action readiness, especially across independently measured relevance, would weaken the hypothesis.

The mythological lens need not calculate complex consequences by itself. Ordinary cognition, testimony, institutions, and a mythology's causal stories can supply a represented effect model; the local bigOther then rapidly classifies the represented support or damage through the installed lens:

“Strengthening” and “weakening” are multidimensional rather than one moral scalar. An oppressive institution may increase its continuity, capacity, reach, or internal cohesion while destroying truth-contact, corrigibility, personal standing, or legitimate exit and while transferring severe costs to other persons and structures. The appraisal hypothesis explains why participants may nevertheless experience its preservation as good; it does not vindicate that appraisal.

Several relevant structures can coexist within the one operative weave without implying several local bigOthers. Their relative weight, conflict rules, and jurisdictions are program content. A predominantly first-order solidarity may make a concrete hierarchy of structures binding as such. A lifted solidarity may make binding a procedure by which competing claims are evidenced, limited, adjudicated, appealed, and revised. This is an application of the order-level distinction, not its definition; in both cases the one slot remains fully occupied.

Systems Leadership adds an important qualification: explicit stories are not the only influences on the lens. The conduct of leaders, the design of systems, the use of symbols, institutional rewards and sanctions, and repeated experiences of belonging, success, humiliation, or exclusion can confirm or contradict the lessons conveyed by a mythology. These experiences may themselves later be narrated as new mythologies.

The relationship is therefore not simply “a story causes a feeling.” Rather:

Systems Leadership commonly describes the lens as evaluating behaviour, systems, and symbols along continua such as:

- honesty–dishonesty;
- trust–distrust;
- courage–cowardice;
- respect–disrespect for human dignity;
- fairness–unfairness;
- love or care–indifference.

Culture mechanics interprets these as important output dimensions of the programmed bigOther. They are not necessarily an exhaustive list of human moral sentiments, but they show concretely what the lens does: it converts a physical or social observation into an affectively consequential classification.

When people possess sufficiently similar mythological lenses, they tend to interpret the same conduct in similar ways.

Systems Leadership calls the resulting shared evaluative pattern culture. Culture mechanics adds that compatible local bigOthers can also exchange signals and synchronize, turning shared classification into distributed affect and coordinated action.

7. Programming, activation, and reprogramming

Culture mechanics distinguishes several operations that are easily confused:

Operation	Timescale	Function
Programming	Slow	Adds, reinforces, or revises mythologies and compatible packages and thereby installs, extends, or modifies the one mythological lens used by the bigOther.
Classification	Very fast	The bigOther applies the installed lens to a person, thought, action, symbol, or event.
Activation	Fast	A present signal activates an already learned mapping in the lens.
Synchronization	Fast	Reciprocal signals align the affective or behavioural states of several people.
Reinforcement	Repeated	Successful, praised, punished, or emotionally intense execution stabilizes mythologies and their mappings in the lens.
Reprogramming	Usually slow	Modifies the operative weave. Compatible change can extend or repair it; incompatible replacement requires sufficient unbraiding of the incumbent and rebraiding of one successor lens.
Unbraiding and rebraiding	Usually slow and conflictual	Loosens load-bearing bindings, preserves or detaches selected strands, crosses a potentially unstable interval, and installs one successor weave rather than a parallel evaluator.

Applied to relevant structures, **relevance activation** foregrounds a concern and appraisal mapping already installed in the lens. **Relevance reprogramming** changes which relational arrangements carry moral weight, how strongly they matter, what support or damage means, or how conflicts among them are resolved. Repeated foregrounding may reinforce and eventually help reprogram the lens, but a one-shot increase in salience does not by itself establish durable reprogramming.

The theory studies one endogenous formation path and one prospective purposive research route.

Endogenous mythology formation is the largely distributed and not centrally designed process through which changes in social structure, institutions, lived practice, and receiver dispositions generate pressures, needs, and aspirations; competing articulations are then selected, sacralized, embodied, and reproduced. It is the ordinary cultural-growth path. *Endogenous* describes causal provenance, not innocence, health, inevitability, or moral legitimacy.

Purposive mythology construction is the open research possibility that a person, office, organization, or coalition might adopt a proposed destination and deliberately intervene in the mythologies, causal classifications, symbols, roles, permissions, and supporting institutions through which a population interprets and acts. Any attempted

constructor remains inside culture: the desired destination, available materials, authority, and perception of the problem have themselves been culturally formed, and the intervention becomes one more input into receiver, institutional, rival, and reality selection.

The detailed semantic definition, design audit, and workflow belong to *Mythology Construction*; the present section states only the distinction needed by the core causal cycle.

ENDOGENOUS FORMATION

changing conditions → diffuse mismatch → competing articulations

→ distributed selection → embodiment and reproduction

PROSPECTIVE PURPOSEIVE CONSTRUCTION

chosen destination D^*

- diagnose receivers, incumbent order, and likely baseline trajectory

- deliberately alter mythologies and supporting arrangements

→ prototype, observe, correct, defend, or retire

The prospective branch treats mythology as a privileged symbolic intervention surface because evaluated stories encode roles, causes, values, permissions, and consequences in a form close to the bigOther's learned operations. It is not the whole implementation surface. Leadership behaviour, systems, symbols, habits, rewards, sanctions, material conditions, and repeated experience may confirm, redirect, or defeat an intended mythology. An attempted purpose therefore does not imply control:

actual successor

$$= \text{intended destination} \times \text{receiver fit} \times \text{incumbent resistance}$$

× institutional selection × rival intervention

× unintended consequence × reality

The multiplicative notation marks joint constraint, not a measured equation.

A slogan, flag, gesture, uniform, accusation, facial expression, or news event normally does not transmit a complete mythological lens. It is a small trigger interpreted by an already programmed bigOther. The same signal can therefore produce opposite reactions in people with differently formed lenses. When the event is subsequently organized and retold as an evaluated story, it can also become a new mythology that reinforces or modifies the lens.

A **master signifier** is an especially dense activation signal. In the co-developed analogy adopted here, it is a **highly compressed protocol token** that indexes and activates an already installed complex of stories, classifications, authorities, identities, sentiments, and expected conduct. The token does not contain that whole complex any more than $\mathbb{M}$ contains every ordered pair of a mathematical mapping. Its power depends upon prior programming and a shared convention for expanding it. Longer stories, repeated practice, and institutional experience can change the program; the token usually calls the program already present.

The same distinction applies when a slogan, song, hero, ritual, work, or exemplary practice evokes a culturally shared sublimation. The carrier does not contain the sublimation process or the durable cultural arrangement that teaches it. It activates installed mappings connecting the represented practice to honour, shame, capability, contribution, belonging, or obligation. A rival or cynical mythology can activate a contrary classification; repeated stories, symbols, rewards, sanctions, systems, and observed conduct can reinforce that mapping and eventually reprogram the operative lens:

incumbent mythologies:

sublimated practice → honour, contribution, capability

↓ rival reclassification

sublimated practice → exploitation, foolishness, conformity, futility

↓ repeated cultural implementation

reinforcement or reprogramming of the mythological lens

↓

local bigOther supplies changed sentiment and motivation

↓

changed enactment, Beseelung, and intergenerational transmission

Wegner's compression and decompression vocabulary supplies a useful second view of this operation: a small token can stand in for a much larger installed complex. In the constitutive language of Culture Mechanics, however, the intrapersonal target is the programming of the mythological lens. A "decoder" is an analogy for recipient reconstruction through ordinary cognition, learned context, the installed lens, and local-bigOther classification—not

a third processor. Prestigious examples, ridicule, rewards, and sanctions are programming and reinforcement channels rather than a substitute for the lens. *Beseelung* remains the independent degree to which the resulting program is affectively alive and conduct-directing, not a separate decoding faculty or necessarily a conscious willingness.

Activation and replacement must therefore not be confused. A signal can activate or reinforce material already compatible with the installed lens. It cannot by itself make an incompatible governing program co-occupy the slot. Such capture requires the incumbent's authority relations and classifications to be loosened, detached, or reinterpreted and a successor weave to be constructed.

8. Culture-mechanical objects, ideological programs, conformity signals, and targeting signals

This section develops a mini-theory of the objects through which cultural programs become personally operative and publicly legible. Its authoritative home is *Culture Mechanics* because the mechanism begins at the interface among an installed lens, the local bigOther that executes it, and a socially intelligible token. The mechanism can then scale into the mechanical-solidarity field developed in [Epistemic Agency under Mechanical Solidarity](#). A symbol is not merely an individual possession: institutions may prescribe it, absence may communicate without deliberate intention, and its aggregate effect may exceed what any one participant intends.

Culture-mechanical object A **culture-mechanical object** is any program, carrier, implementation arrangement, processor state, or emergent collective organization whose relevant function is to install, activate, transmit, execute, synchronize, or enforce culturally learned social and evaluative classifications. The term is proposed by the present framework as a broad analytical umbrella. It does not make every member of the category the same kind of thing.

Culture-mechanical object	Meaning	Examples
Program complex	A large, internally structured package capable of programming an operative mythological lens	Religions, Marxism, National Socialism, liberal constitutional culture, nationalism, company cultures, activist movements, military ethos, professional cultures, state programmes
Program unit or content	Material from which a larger operative weave is constructed	Mythologies, narratives, causal stories, moral rules, roles, exemplars, sacred values, master signifiers
Carrier or activation device	A token through which the program is communicated, activated, or made publicly legible	Flags, veils, blue neckerchiefs, imposed yellow stars, badges, certificates, slogans, linguistic forms, masks, salutes, songs, whistle signals
Implementation arrangement	A durable structure that rewards, sanctions, repeats, or institutionalizes the program	Schools, appointment systems, rituals, calendars, dress codes, promotion criteria, laws, media routines, organizational systems
Local execution	The installed program as executed by an individual sentiment classifier	A local bigOther applying its mythological lens
Collective formation	The emergent result of compatible local execution and reciprocal signalling	Mechanical solidarity and the distributed bigOther
Collective agent	A sufficiently integrated and continuous collective formation capable of judgment, intention, ownership, and action	A multi-mind-self

A culturally legible phrase, song, image, hero, or ritual that evokes a shared sublimation remains a **carrier or activation device**, an **ideological symbol**, a master-signifier-like token, or a fragment of mythology according to its actual function. The Wegner-facing expression **sublimation emblem** may be useful as explanatory shorthand for

its compressed representative role, but it does not create a new culture-mechanical object type. Analysis must keep separate the sublimation process, its resulting character or practice, the cultural sublimation architecture that recurrently produces it, and the token that activates relevant programming.

In common contemporary political, organizational, and media usage, **narrative** is often a fuzzy synonym for **mythology**. Culture mechanics retains a precise boundary inside that overlap. *Narrative* is the broader term for an organized account of events, actors, causes, and consequences. A narrative becomes culture-mechanically mythological when it also carries socially learned evaluation, roles, causal interpretation, expected feeling, or permission—when it teaches not only what happened but what should feel admirable, shameful, legitimate, treacherous, threatening, redemptive, permitted, or forbidden. A merely chronological account need not be a mythology. A **causal story** is a narrative specialized around explaining why something happened and assigning agency or responsibility. The common political expression “**the narrative**” may refer more broadly to an authorized mythology, mythology family, or even the lens through which events are required to be interpreted; its precise level must be identified from context.

At the applied level, **narrative design** and **narrative construction** are therefore close practitioner-language synonyms for **mythology construction**. *Mythology Construction* develops this relationship and identifies existing narrative-design toolkits as partial practical implementations of the same intervention domain.

A whole religion, political formation, company culture, activist movement, or state programme may be a **composite culture-mechanical object** containing several of these subtypes. The name *Christianity*, *Islam*, *Judaism*, *Marxism*, *National Socialism*, or *company culture* may refer in one sentence to a body of programming and in another to its institutions, carriers, synchronized population, or collective agency. Analysis must therefore identify which level is meant rather than treating the inherited name as a precise ontology.

What the theory is disentangling Ordinary vocabulary often uses *religion*, *ideology*, *culture*, *collective consciousness*, *big Other*, or *group mind* as near-synonyms. Culture mechanics treats religion and secular ideology as members of the same broad family of cultural programming while refusing to collapse program, processor, protocol, field, and agent:

Construct	Precise role in culture mechanics
Cultural or ideological program	The executable package of mythologies, classifications, rules, roles, values, and expected conduct installed as one operative weave.
Mythological lens	The generalized mapping through which observations are converted into culturally learned values and feelings.
Ideological symbol	A socially legible token that activates the program and communicates a person's relation to it.
Conformity signal	An ideological symbol whose performance or nonperformance makes conformity and deviation publicly legible.
Targeting signal	A performed, omitted, imposed, or attributed token that assigns a person or population to a sanctionable out-group.
Local bigOther	The individual sentiment classifier that executes the installed lens.
Lacan's big Other	The shared symbolic vocabulary and protocol through which the program and its tokens become publicly intelligible.
Mechanical solidarity	The synchronized symbolic-affective coherence produced through compatible local execution and reciprocal response.
Distributed bigOther	The persistent network state maintained through persons, institutions, practices, artifacts, reputations, and sanctions.
Multi-mind-self	The distributed system only when it becomes sufficiently integrated and continuous to judge, intend, own, and act as a collective agent.

In this section, **ideological** is the broad, religion-inclusive adjective for anything pertaining to such a cultural program. It includes religious, political, organizational, professional, activist, national, and lifestyle programs. This broad use must be distinguished from the narrower **ideological form**, the third member of the private–collective–ideological–fundamentalist taxonomy below. The expression **ideological-form program** names that third configuration when the two senses might otherwise be confused.

Disagreement, mythological rivalry, and ideological-form conflict The broad adjective *ideological* must not turn every disagreement into one undifferentiated “ideological conflict.” Culture mechanics distinguishes the object and intensity of conflict:

Term	Culture-mechanical meaning
Propositional disagreement	Incompatible truth claims that need not involve rival governing lenses.
Causal-story conflict	Incompatible accounts of agents, causes, intentions, responsibility, or remedy.
Classification conflict	Incompatible assignments of identity, status, purity, legitimacy, or permission.
Mythological rivalry	Informal or decentralized competition among meaning systems, including lifestyles, religions, political outlooks, and institutional cultures.
Mythological conflict	Active interference with a rival mythology’s transmission, authority, membership, or institutional embodiment.
Cultural-program conflict	Competition between incompatible governing programs or operative lenses, especially where single-slot replacement is at stake.
Ideological-form conflict	Organized recruitment, formation, conformity testing, delegitimation, and interference with a rival program’s reproduction.
Fundamentalist-form conflict	Ideological-form conflict in which expansion, retention, punishment, expulsion, or elimination authorizes or uses physical coercion or violence.

Rivalry becomes conflict when participants begin actively interfering with the rival mythology’s transmission, authority, membership, or institutional embodiment.

Mythological rivalry can therefore persist without organized conflict. The transition can occur through recruitment campaigns, polemical unbraiding, conformity tests, delegitimation, exclusion from channels, institutional displacement, or censorship. *Mythology Construction*, “Mythological replacement: braiding, apologetics, and polemics,” develops these operations and the problem of installing a successor weave.

Kenneth Minogue calls the organized struggle **ideological conflict**. In the preface to the second edition, dated January 2006 (p. xvi), of *Alien Powers: The Pure Theory of Ideology*, he argues that an initial move is to disable opposition, ideally by censorship. In Culture Mechanics terminology, this maps most directly to **ideological-form conflict**, and to **fundamentalist-form conflict** when physical coercion or violence becomes the means of expansion or retention. Minogue’s narrower, mobilizing, conflict-centered conception must not be silently equated with the broad religion-inclusive adjective *ideological* used in this document.

Call censorship or channel exclusion **rival-signal suppression** when it obstructs a competing mythology’s signals, and **counter-program suppression** when it attacks the rival program’s reproduction or institutional embodiment. A counter-narrative is not analytically random noise: it may carry a rival mythology, independent evidence, an internal correction, minority perception, or innovation. For the relationship between this distinction and the physical noise-suppression heuristic, see *Analogical Models in Culture Mechanics: A Semantic Inventory*, “Positive feedback, noise, and rival signals.” These conflict terms are project-developed translations; they are not Minogue’s taxonomy.

Ideological symbols must be classified by function

An ideological symbol is a material object, word, linguistic form, gesture, sound, image, ritual, omission, or other socially legible token that activates an installed ideological program and communicates a person’s relation to that program.

The medium is incidental to the definition. A piece of cloth, grammatical ending, salute, profile image, whistle pattern, silence, refusal to applaud, or continued association with an excluded person can perform the same operation when participants know how to decode it. A symbol can be simultaneously functional in another domain: a mask can be a medical device and also acquire a moral-political meaning; clothing can protect from weather and also display membership. The presence of one function neither proves nor excludes the other.

Ideological symbols can perform several distinguishable functions:

1. activate an installed program;
2. cue the carrier’s conduct;
3. display affiliation or membership;
4. distinguish insiders from outsiders;
5. advertise the program or invite imitation;
6. test conformity and expose deviation;
7. assign or expose a sanctionable out-group;
8. synchronize attention, affect, identity, judgment, or action;
9. manufacture apparent consensus;
10. mark refusal as moral or character failure;
11. communicate a claim to wider social jurisdiction;
12. enable social, institutional, legal, or physical sanctions.

No one token necessarily performs every function. Function must be inferred from the surrounding program, expectations, audience, treatment of refusal, and actual institutional consequences rather than from material form, religious or secular origin, or the stated intention of one carrier.

Conformity signals

An ideological symbol becomes a conformity signal when its performance, display, absence, refusal, or substitution makes conformity and deviation publicly legible and thereby enables monitoring, reinforcement, sanction, recruitment, exclusion, or a claim to wider jurisdiction.

A **boundary signal** distinguishes insiders from outsiders. A **propagation signal** is designed or selected for easy public reproduction and advertises, normalizes, or spreads the program. A secret greeting may mainly mark a boundary; a slogan, salute, hashtag, linguistic convention, pledge, or clothing expectation may invite or pressure everyone to repeat it. One symbol can perform both functions.

Targeting signals Conformity signals and target markers are not mutually exclusive material classes. They name functions that may overlap in the same token or expectation:

A targeting signal is any performed, omitted, imposed, or attributed socially legible token that assigns a person or population to a sanctionable out-group and thereby makes exclusion, coercion, persecution, or violence easier to direct.

Here **sanctionable** means treated by the program as available for sanction; it does not mean that the classification or sanction is justified.

A conformity signal becomes a targeting signal when its absence, refusal, substitution, or incorrect performance makes the nonconforming person legible as a sanctionable outsider.

The relevant **signal polarity** is how the classification becomes visible, not whether the carrier voluntarily communicates it:

Mode	Culture-mechanical operation	Vivid example
Performed conformity	Display marks the person as one of “us”	Blue neckerchief, expected mask, badge, salute, pledge, or prescribed linguistic form
Negative targeting through nonperformance	Absence, refusal, substitution, or incorrect performance identifies the deviant	Missing neckerchief, unmasked face where masking is expected, absent certificate, refused salute, or unapproved wording

Mode	Culture-mechanical operation	Vivid example
Imposed target marking	A hostile authority forces the out-group classification onto its target	The yellow star imposed on Jews under National Socialism
Attributed target marking	A name, accusation, record, database entry, or administrative category assigns target status without requiring a visible token	“Heretic,” “class enemy,” “extremist,” “unvaccinated,” or a corresponding institutional record when the classification routes sanctions

The blue neckerchief and the yellow star therefore differ in their direction of assignment but can converge downstream. The neckerchief marks the compliant member and its absence can expose a nonconforming target. The yellow star directly and forcibly marks the person whom the governing program classifies as an outsider. Both make a culturally defined boundary operational by making persons sortable.

COVID-19 supplies a particularly clear mixed case. An unmasked face could become a negative targeting signal wherever masking was expected and refusal was treated as evidence of irresponsibility, danger, or defective character. Vaccination status was normally not visible by itself; certificates, database checks, disclosure requirements, denied access, and verbal classification made it legible. The official phrase “[pandemic of the unvaccinated](#)” turned a biomedical status into a named causal category within public discourse and was explicitly joined to vaccination requirements. In a given setting, whether this classification became a targeting signal must be tested by examining blame, expected displays, access conditions, sanctions, and the treatment of refusal. This functional analysis does not by itself decide the empirical accuracy, medical value, legality, proportionality, or moral legitimacy of a mask or vaccine policy.

The decisive operation can therefore be negative. Where a display is expected, its absence identifies the person who has not complied without requiring that person to make a declaration. The signal thereby turns conduct into public telemetry:

When the performance is mutually observable, it can also generate **common knowledge**: participants know the signal, know that others received it, and know that others can observe their own response. [Michael Suk-Young Chwe's *Rational Ritual*](#) supplies this coordination mechanism. Common knowledge can organize outward conduct without proving private assent or the complete culture-mechanical account.

This loop can produce sincere convergence, strategic compliance, preference falsification, pluralistic ignorance, or a mixture of them. [Timur Kuran's *Private Truths, Public Lies*](#) supplies the established neighbouring mechanism in which public expression diverges from private preference under pressure. [Václav Havel's *The Power of the Powerless*](#) shows how ritual public conformity can reproduce a system without requiring private belief. Culture mechanics adds the local-processor, symbolic-protocol, and field account; neither author proposed this complete synthesis.

The installed program also supplies a virtual **yardstick of the good member**: a good hunter, vegan, worker, believer, citizen, revolutionary, or comrade. The conformity signal makes a person's apparent position against that yardstick visible. Assenting to an absurd statement can therefore become an especially powerful loyalty test: agreement with “2 + 2 = 5” communicates little about arithmetic but much about willingness to submit. Signals can also mark enemies. Public rejection of a stigmatized word, object, person, or association may become its own proof of belonging.

A compulsory conformity signal is not automatically a **credibility-enhancing display** or CRED. In Joseph Henrich's narrower model, costly conduct by a model can make professed commitment credible; see “[The Evolution of Costly Displays, Cooperation and Religion](#)”. With a compulsory symbol, the principal cost may fall on refusal rather than on

performance, and compliance may be purely strategic. **Sanction-backed conformity signal, compulsory membership signal, or public loyalty marker** is then more precise. No unvalidated checklist or numerical threshold should be presented as a CRED measure.

Beseelung and four propagation and enforcement forms The originating **dead–alive** analogy distinguishes information that is merely known from programming that animates conduct. A relatively dead rule resembles “stop at the red pedestrian light”: a person can notice and ignore it without much guilt. An alive practice can make omission feel like personal failure, guilt, or betrayal. The German *beseelt*—literally, in a poetic translation, “ensouled”—better conveys this experienced animation than the bloodless word *stored*.

Beseelung is an independent axis. It concerns how affectively alive and conduct-directing a program is, not how widely it recruits or how aggressively it enforces. A private dietary or yoga practice can be intensely alive. A football crowd can synchronize powerfully without seeking converts. A perfectly conforming functionary can privately believe nothing, and a fundamentalist system can be enforced by cynical officials.

When a programme contains an agent-model, *agentified Beseelung* can make that agent sufficiently present within local evaluation that the person begins to perceive, judge, and act from its represented perspective. This joins the dead–alive axis to bigOther-presence without making them synonyms: a practice can be deeply *beseelt* without a personified Thou, and an asserted vision or voice does not by itself establish durable affective animation, distributed agency, or fusion.

Relative deadness can also be a historical remainder. A culture may preserve a rule, word, symbol, institution, or habitual procedure after losing the mythology, rituals, practices, and transmission relations that once made it sacred, identity-bearing, and synchronizing. Such a remnant can remain functionally useful: the pedestrian signal still coordinates movement even when it no longer evokes guilt, sacrifice, or an experience of collective being. A later observer who sees only that remnant cannot safely infer that the rule was always affectively dead.

This creates a three-way calm-period ambiguity: an intact cultural system may be **dormant**; surviving material may be **de-animated**; or the former synchronization technology may be **culturally lost** and require successor construction rather than reactivation. Loss of that technology does not empty the one PCI slot: another operative mythological weave still occupies the local bigOther. *Epistemic Agency under Mechanical Solidarity, “Observability, cultural forgetting, and contemporary witnesses”* states the historical hypothesis and evidential problem. *Analogical Models in Culture Mechanics: A Semantic Inventory* maps them to the nested quantum, laser, magnetism, weak-field gravity, and contemporary-witness pictures.

The private–collective–ideological–fundamentalist distinction classifies dominant **propagation and enforcement configurations**, not different kinds of bigOther and not a necessary sequence through which every program passes:

Form	Characteristic propagation	Typical symbolic function	Treatment of nonparticipation
Private	Self-selection and personal discovery	Self-cue, personal commitment, optional recognition	Normally irrelevant to outsiders; private relational boundaries may still be strong
Collective	Attraction, affiliation, and display of the pleasures of belonging	Membership, shared enjoyment, ritual synchronization, advertisement of the community	Usually tolerated, although reputation and coordinated ostracism become possible
Ideological form	Active recruitment, education, and formation in the “correct” way of being	Public conformity, loyalty tests, mission, and apparent unanimity	Moral, social, educational, or institutional pressure
Fundamentalist	Militant expansion, retention, or defence	Mobilization, enemy marking, surveillance, and demonstrations of irreversible commitment	Authorization or willingness to use physical coercion or violence to convert, retain, punish, expel, or eliminate

Vivid ideal-type examples:

- In the **private form**, consider a dietary or yoga practice found and adopted on one's own initiative. Communities of practice may exist, but the program does not strongly recruit outsiders.
- In the **collective form**, consider football-club or pop-star fandom. It attracts through advertising, spectacle, and the visible pleasures of belonging rather than demanding conversion.
- In the **ideological form**, consider a proselytizing religion or a political movement such as Marxism. Mission, education, cadre formation, or comparable training forms members in the "correct" way of being.
- In the **fundamentalist form**, consider a militant religious or political movement willing to use bodily force to convert or retain members, punish refusal, expel opponents, or eliminate rivals.

These examples make the forms concrete; they do not establish that every instance belongs wholly to one form. Whole religions, cultures, institutions, or movements may nevertheless be classified as predominantly one form when the scope, evidence, counterexamples, and possible falsifiers are stated.

The taxonomy is a project-developed synthesis, not a classification attributed to [Susan Blackmore's account of memes and memes](#). Her replicator account supplies a neighbouring way to think about copied cultural information; the four forms classify the propagation and enforcement configurations in which a program is reproduced. Their variability illustrates the originating software analogy: programs are flexible—that is the force of *soft* in *software*.

The forms compress several axes that must remain separately inspectable:

- depth of *Beseelung*;
- public visibility;
- outward recruitment or proselytism;
- inward retention and treatment of exit;
- lateral intolerance of rival allegiance;
- jurisdiction over domains of life;
- synchronization strength;
- social and institutional sanctions;
- authorization or willingness to use physical violence.

Strong conviction is not by itself fundamentalism. Proselytism is not jealousy; jealousy is not physical violence; and discursive violence, defined below, can occur before the fundamentalist form.

Jealous programs, solidarity, and collective agents The originating analogy is deliberately vivid:

A jealous multi-mind-self resembles a jealous lover who wants to own the beloved and cannot tolerate divided allegiance.

The corresponding operational definition is:

A jealous cultural program claims exclusive allegiance, classifies incompatible commitment, dissent, or exit as betrayal, and mobilizes symbols, sanctions, institutions, and collective affect to defend that claim.

[Kenneth Minogue's Alien Powers: The Pure Theory of Ideology](#) provides a close published neighbour in its treatment of ideological revelation as jealous and expansionary. **Jealous cultural program** and its integration with the present ontology are project-developed terms, not Minogue's complete theory.

Jealousy must be attributed at the correct level:

Level	Operation in a jealous configuration
Lacan's big Other	Carries publicly intelligible categories and tokens such as loyalty, betrayal, idolatry, heresy, oath, flag, scarf, and rival symbol. It is the protocol, not the jealous agent.
Local bigOther	Executes a jealous lens and makes rival allegiance, refusal, or exit feel shameful, contaminating, frightening, or treacherous. In bigOther-presence , and especially bigOther-as-Thou , the person may directly feel a present jealous Other that claims fidelity and refuses divided allegiance. Calling the processor itself jealous remains functional shorthand for the program it executes; calling the experienced presence jealous describes how that operation can be lived.

Level	Operation in a jealous configuration
Mechanical solidarity	Synchronizes compatible classifications and reciprocal enforcement.
Distributed bigOther	Preserves the network state through expectations, reputations, rituals, institutions, symbols, and sanctions.
Multi-mind-self	If the collective-agent threshold is met, the integrated system can itself claim, condemn, exclude, punish, or attack through its members and institutions.

Jealousy therefore has both an **analytical description** and a **phenomenological appearance**. Analytically, the installed program defines exclusive loyalty and the local bigOther executes its classifications. Phenomenologically, a jealous God, Nation, People, History, or Cause may be encountered as personally present—watching, addressing, claiming, accusing, or demanding sacrifice. This direct individual experience does not collapse the local processor into Lacan’s shared symbolic protocol, and it does not by itself establish that the surrounding distributed bigOther has crossed the multi-mind-self threshold.

Single-slot exclusivity is not jealousy. Every stable program fully occupies the one local slot, including an open, pluralistic, lifted program. Jealousy begins when the installed program additionally demands exclusive allegiance, treats legitimate rivalry or replacement as betrayal, blocks dignified exit, claims the whole person, exceeds its jurisdiction, or monopolizes authoritative interpretation.

Jealousy and proselytism are hypothesized to reinforce one another often, especially in ideological-form and fundamentalist programs, but they are not identical. A separatist sect can retain members jealously while seeking no converts; a missionary movement can recruit energetically while respecting refusal and exit. Analysis should therefore record outward recruitment, inward retention, rival intolerance, jurisdiction, and enforcement separately.

[Exodus 20:3 and 20:5](#) supply the theological exemplar of a jealous God, exclusive covenant loyalty, and “no other gods.” The jealous-lover comparison uses this as an analogy for the classification of rival attachment as betrayal or idolatry, not as empirical proof of the social mechanism. The related Christian interpretation—that the human capacity to join a multi-mind-self is the “God-shaped hole” that should be filled by God rather than a human ideological collective—is an originating confessional interpretation, not a general scientific proposition or a settled philological claim.

Moralization as character accusation: Andrick’s bridge [Michael Andrick’s *Im Moralegefängnis: Spaltung verstehen und überwinden*](#) supplies the missing micro-mechanism between moral classification, conformity signalling, exclusion, and escalating violence. In Andrick’s account, misplaced moralization performs two changes at once:

1. **Focus:** the exchange moves from the disputed issue to the other person’s character.
2. **Mode:** inquiry and argument become accusation and prosecution.

His kindergarten example preserves the operation vividly. A discussion about whether a kindergarten should have two or three floors becomes a trial of whether one participant is a good person who deserves to remain in the discussion. A fleeting statement or minor act is read as a revealing disclosure of character; the alleged disclosure becomes a character accusation; and the person’s standing, rather than the proposition, becomes the target:

```
factual disagreement or missing conformity signal
↓
statement, omission, or association becomes "character disclosure"
↓
character accusation
↓
inquiry becomes prosecution
↓
discursive standing is attacked
↓
submit, recant, or be excluded
```

Andrick’s strong verdict is that **moralization is discursive violence** and makes physical violence more likely. Its immediate domination does not require bodily force: it attacks the other’s recognized standing and invokes the background threat, “You may not be breaking public law, but you are breaking my law; submit or I will exclude

you.” Even legitimate moral condemnation remains aggressive in this account. In private relationships it is the metaphorical **atomic bomb**, or the sharpest social weapon, although consciously removing an intolerable person from one’s voluntary private circle may itself be legitimate.

The tendency toward violence therefore cannot simply be abolished in Andrick’s account: even justified moral condemnation contains an exclusionary threat. His associated freedom claim is equally strong—pathological moralization and free self-determination cannot coexist. Official voluntariness does not settle the question when refusing a prescribed linguistic form, dress expectation, ritual, or declaration brings foreseeable moral, social, or professional punishment.

Culture mechanics extends rather than merely repeats Andrick’s account:

```
local bigOther classifies a person as bad, disloyal, or unbearable
    ↓ encoded through
shared accusation, stigma, required denunciation, or conformity test
    ↓ reciprocally reinforced as
mechanical solidarity and collective exclusion
    ↓ preserved through
distributed reputations, institutional routines, records, and sanctions
    ↓ possibly executed by
a multi-mind-self capable of organized judgment and action
```

Guilt by association is a secondary conformity signal. Continuing to speak with an excluded person, refusing to denounce them, or preserving a public relationship can itself be treated as a character disclosure. Cancel culture, refusal to enter discussion with opponents, mandatory denunciation, and the public sorting of people into epistemic tribes are candidate manifestations of this mechanism; each case still requires evidence that the operation actually occurred.

Division is therefore not merely a static condition. It can be continuously enacted as people stop speaking with opponents, speak only about them, infer character from statements, demand public denunciation, and punish continued association. The present framework adds the **moral-closure hypothesis**:

Rudolf Bilz’s formulation of human existence as **tribunal existence** and [Odo Marquard’s “tribunalization of modern lived reality”](#) are neighbouring diagnoses of a condition in which persons are placed under pervasive accusation and pressure to justify their right to be as they are. The exact primary source for Bilz’s formulation remains to be verified; it is retained here as a provenance lead rather than presented as established evidence for the mechanism.

```
group bundles around an argument
    ↓
non-bundlers are excluded
    ↓
belonging becomes membership among "good people"
    ↓
opposition becomes character defect
    ↓
an open society is converted into a closed community
    ↓
the closed community seeks dominance
```

The originating discussion connected this sequence with Ulrike Guérot’s “bundling” description of a group organizing around an argument and excluding those who refuse to bundle, and with Ferdinand Tönnies’s distinction between open societal association and closed community. That compound attribution still requires a primary-source audit. The diagram above is therefore Culture Mechanics’ moral-closure hypothesis, not a definition attributed to Guérot, Tönnies, or an established general definition of fascism.

The originating **ideology-as-hallucination hypothesis** is stronger still: an ideology operating as a collectively protected hallucination cannot win through a reality-facing explanation of mechanisms and consequences and therefore tends to use discursive domination. On this hypothesis, moralization expresses fear—or, in the culpable case, knowledge—that the position would fail under fair conditions among equals. This is a definite and risky project hypothesis, not an established result of Andrick’s book. It would be weakened by cases in which a position systematically moralizes strong opponents despite repeatedly prevailing under open, symmetrical, evidence-sensitive contest, or by evidence that the moralization is better explained without awareness or fear of argumentative weakness.

The enforcement–exclusion and violence repertoire The originating claim is:

Enforcement and exclusion are dual operations. Enforcement states or applies a condition of continued inclusion, standing, access, or permitted action; exclusion withdraws or denies these goods when the condition is not met.

Andrick’s compact threat–“Submit, or I will exclude you”–contains both sides. From the program’s perspective, the rule is enforced. From the affected person’s perspective, refusal can mean exclusion from moral standing, discussion, relationship, community, institution, territory, or life. The same sanction often does both simultaneously: excluding one visible nonconformist also enforces conformity among everyone who observes the consequence.

This is a structural duality, not an assertion that enforcement and exclusion are identical in every case. Instruction, persuasion, reward, or ordinary coordination can maintain a practice without applying an exclusionary sanction. A person can end a private relationship without trying to govern a wider public. Physical coercion can be used to retain or convert a person rather than expel them, although it excludes their alternative conduct and violates bodily autonomy. Jurisdiction, proportionality, evidence, due process, and the good being withheld remain separate questions.

The word *violence* must likewise not hide the difference between moral evaluation, discursive domination, exclusion, coercion, and bodily force:

Form	Program-side enforcement	Excluded standing or domain
Moral evaluation	Classifies conduct as good or bad; ordinary bigOther activity, not necessarily moralization	Moral approval or recognition as a good member; no civic or social exclusion need follow
Discursive violence	Replaces inquiry with character accusation and attacks the opponent’s standing	Credibility, admissibility, or recognition as a legitimate interlocutor
Relational exclusion	Conditions or ends friendship, intimacy, or voluntary private association	A particular relationship or private circle
Collective social exclusion	Uses ostracism, cancellation, guilt by association, or coordinated reputational destruction	Community membership, social contact, reputation, and informal opportunities
Institutional coercion	Conditions employment, education, platforms, services, office, or professional standing on submission	Access to institutions, occupations, services, platforms, or public roles
Physical violence	Uses or threatens bodily force to compel, retain, punish, convert, expel, or eliminate	Bodily autonomy, movement, safety, territory, or the permitted alternative course of action
Eliminative violence	Treats the rival as having no right to remain, participate, or exist	Membership, territory, public existence, life, or memory

The conformity-signal mechanism is the sensor and this repertoire supplies possible outputs:

This repertoire is not a deterministic ladder. Moralization can stop at private withdrawal or social exclusion, and movements can jump to institutional or physical coercion. The compact distinction is:

All moralization is discursively violent in Andrick’s sense; not all moralization expresses willingness to use physical violence. The fundamentalist threshold is authorization or willingness to use physical or eliminative force, not the mere presence of moral aggression.

Moralization can nevertheless raise the probability of further violence by turning the mistaken person into the bad person, licensing exclusion, making punishment appear deserved, and allowing aggression to be experienced

as protection, justice, purification, or duty. This is a probabilistic escalation hypothesis, not the claim that every moralized disagreement becomes physically violent.

Stanton’s genocidal escalation processes as a neighbouring model [Gregory H. Stanton’s *Ten Stages of Genocide*](#) supplies a neighbouring model of how collective classification and symbolization can become organized eliminative violence. Stanton now emphasizes that the “stages” are overlapping, non-linear processes: they can operate simultaneously, need not advance inexorably, and can be interrupted. His object is the specific process leading to genocide; the culture-mechanical repertoire is broader and also applies to non-genocidal programs, relationships, institutions, and conflicts.

The models therefore map onto one another without becoming synonyms:

Stanton’s process	Culture-mechanical relationship
1. Classification	The mythological lens divides a population into “us” and “them.” Classification is upstream of violence and can also serve benign or necessary distinctions.
2. Symbolization	Names, dress, documents, and other tokens make the classification socially legible. An expected conformity signal can target through its absence; an imposed marker such as the yellow star directly marks the out-group; an attributed label can do so without a worn object.
3. Discrimination	Enforcement–exclusion becomes durable law, custom, or institutional practice that removes rights, standing, access, or opportunity from the classified group.
4. Dehumanization	Moralized character accusation expands into categorical enemy construction: persons become vermin, disease, contamination, pollution, or another kind of being whose removal can be redescribed as cleansing or protection.
5. Organization	Parties, bureaucracies, police, armies, militias, media systems, lists, and surveillance turn hostility into scalable implementation capacity. Organization is infrastructure for violence, not by itself another form of violence.
6. Polarization	Moral closure, guilt by association, communicative severance, and attacks on moderates disable countercultures, compromise, and independent correction.
7. Preparation	Plans, target lists, training, weapons, mobilization, and euphemistic goals make organized physical or eliminative intent operational. These are strong indicators that the fundamentalist threshold has been crossed, although no numbered Stanton process defines that threshold.
8. Persecution	Institutional coercion and physical violence become coordinated identification, dispossession, arrest, displacement, confinement, torture, or killing of the target population.
9. Extermination	Genocide is a specific collective form of eliminative violence. The culture-mechanical category is broader because programs can seek to eliminate political, social, or other rivals without satisfying the definition of genocide.

Stanton's process	Culture-mechanical relationship
10. Denial	The program protects itself after and during violence through euphemism, destroyed evidence, impunity, blame reversal, suppression of memory, and attacks on witnesses. This connects the enforcement–exclusion and violence repertoire to memory control and systemic lying in Epistemic Constitution of Lifted Mechanical Solidarity .

Stanton's model supplies historically developed observations and an early-warning process model. It does not establish the local-bigOther processor, distributed field, jealousy, or multi-mind-self ontology proposed here. Conversely, Culture Mechanics proposes a possible micro-to-macro mechanism through which some of Stanton's processes become affectively compelling, mutually observable, and institutionally executable.

The connection is a risky escalation hypothesis, not guilt by conceptual association. A classification, symbol, health rule, access condition, or act of private exclusion does not establish a genocidal trajectory. The inference becomes stronger only as additional processes appear: a sanctionable out-group, dehumanizing mythology, destruction of moderating relations, scalable coercive organization, preparation for physical force, persecution, and elimination. The absence of these transitions, durable protection of the target group's equal civic standing, and effective correction of wrongful classifications count against the escalation hypothesis.

Private morality and public standing The originating maxim “**morality is private**” protects an essential boundary: private moral revulsion does not by itself decide who may participate in public life. Taken absolutely, however, it would exclude genuine public moral questions and legitimate public authority. The compatible formulation is:

Comprehensive personal moral convictions do not by themselves determine another person's civic standing. Public coercion requires publicly contestable rules, proper jurisdiction, evidence, proportionality, and due process.

Or, more vividly:

We may debate moral questions publicly, but disagreement must not become a character trial that revokes the opponent's right to participate.

This boundary does not prohibit private association or moral judgment. It prevents a private moral law from silently becoming public jurisdiction. Its institutional development belongs in [Epistemic Constitution of Lifted Mechanical Solidarity](#), especially “Low-cost contradiction, not low-cost condemnation.”

Worked examples and boundary tests **The DDR blue neckerchief.** The blue neckerchief of the Pioneer organization was not merely clothing or a membership badge. In a school environment where almost every child was expected to be a Pioneer, wearing it displayed conformity while the missing scarf exposed refusal without requiring the child to speak. The [historical description by MDR](#) records that Pioneer membership was part of ordinary school life and served the state's socialist education. The culture-mechanical interpretation–boundary marker, identity and loyalty signal, public compliance device, and trigger for monitoring or sanction–is the present framework's synthesis.

Speech and conduct. Prescribed gendered language (*Gendern*) can perform the same operation as cloth when use displays conformity, non-use becomes observable, and non-use is interpreted as character disclosure. A COVID mask can remain a medical device while also functioning as an ideological signal when the surrounding field makes it a visible test of responsibility, obedience, solidarity, distrust, or political allegiance. A salute, pledge, pronoun formula, badge, ribbon, flag, profile image, applause, whistle, silence, or continued association can likewise carry the operation. The test is functional and contextual, not material.

Kippah and Islamic veiling. The originating whole-religion comparison is deliberately asymmetric and testable. Judaism is hypothesized to be predominantly non-proselytizing and the kippah predominantly member-directed: its ordinary public meaning is the wearer's observance and affiliation, not a demand that surrounding non-Jews adopt it. Islam, considered as a whole religious-cultural program, is hypothesized to be predominantly proselytizing and jealous. Islamic veiling can therefore function simultaneously as personal observance, internal conformity, outward propagation, and a claim to public moral jurisdiction. This classification concerns the operative canonical and institutional program and its aggregate trajectory; it does not assert that every Jew, Muslim, kippah wearer, or veiled woman understands or intends the complete operation.

On this hypothesis, veiling can become a **public threat** in a precise culture-mechanical sense: not because the fabric or every individual wearer issues a conscious threat, but because the surrounding program publicly represents a demand for wider jurisdiction and makes sanctions against eventual refusal predictable if that program becomes dominant. The kippah contrast predicts no comparable Judaism-wide apparatus for punishing refusal or compelling outsiders; evidence of such an apparatus would count against the comparison.

The blue neckerchief and Islamic veiling are thus proposed as **functional homologues** when both embody the program in everyday life, make conformity and refusal legible, distinguish good members from questionable ones, enable peer or institutional monitoring, normalize the underlying order, and reproduce it through public performance. Their differences concern propagation, jealousy, jurisdiction, and enforcement, not a categorical division between secular and religious symbols.

The boundary is not Iran. Police enforcement is the extreme implementation layer, not the beginning of a jurisdictional claim. The originating trajectory is:

```

practice presented as personal choice
↓
practice promoted as protection, dignity, or empowerment
↓
practice becomes a public model of proper conduct
↓
criticism is moralized as hostility or harm
↓
countercultures lose legitimate means of defence
↓
institutions accommodate and reproduce the norm
↓
nonconformity becomes socially or professionally costly
↓
the norm acquires legal and police enforcement

```

The language of protection can create an asymmetric field: the advancing program expresses its demand as care, freedom, dignity, or safety while resistance is classified as prejudice or aggression. The program remains free to extend its norm, while countercultures are morally disarmed from defending their own order. This is the proposed **protection-framed jurisdictional manoeuvre**. It can emerge through many sincere participants without a central conspiracy. Only when the collective-agent threshold is met should it be attributed as an intentional manoeuvre of a multi-mind-self; below that threshold it remains an emergent operation of a program, solidarity field, and distributed bigOther.

Iran is proposed not as the boundary at which the problem begins but as an advanced realized form in which a religious prescription has captured state jurisdiction. The [United Nations Independent International Fact-Finding Mission on Iran](#) documents morality-police deployment, surveillance, arrests, prosecution, and forced pledges connected to mandatory hijab enforcement. The originating **end-state hypothesis** is conditional and categorical: for the relevant aggressively proselytizing and jealous Islamic movements in Western societies, success means defeating countercultures and acquiring sufficient institutional power; **if they succeed, Iran is the predicted end-state form**, in which promoted Islamic norms become compulsory public jurisdiction. Iran exhibits the predicted completed conversion; its existence does not by itself establish that every movement will succeed.

The religion-level hypothesis should be tested against canonical claims, mission and jihad doctrines, historical institutional trajectories, treatment of apostasy and criticism, freedom of rival religions, rules governing women's dress, and conduct after political dominance is obtained. It would be weakened by durable Muslim-majority orders possessing overwhelming cultural and political power while intrinsically protecting across generations:

- genuine freedom not to veil;
- conversion away from Islam and public criticism of Islam;
- rival religions and nonreligious life;
- equal civic standing independent of religious conformity;
- constitutional barriers preventing Islamic morality from becoming compulsory public law.

Judaism's contrasting classification is equally revisable: evidence of systematic outward conversion, expanding jurisdiction over non-Jews, or coercive enforcement of kippah observance would weaken the predominantly non-proselytizing, member-directed hypothesis. Whole religions may be classified. The scientific safeguard is precise scope, evidence, countercases, and falsifiability—not protective euphemism.

Combined mechanism and boundaries The mini-theory's central mechanism is:

jealous mythology defines exclusive loyalty
↓
ideological symbol activates the installed program
↓
conformity or targeting signal makes loyalty, refusal, or target status observable
↓
deviation or target status is interpreted as character or category disclosure
↓
moralization turns disclosure into accusation
↓
mechanical solidarity distributes the judgment
↓
systems impose exclusion, coercion, or violence
↓
the program defends or expands its jurisdiction

This mechanism is not a claim that every symbol is a conformity or targeting signal, every conformity signal is jealous, every target classification is wrongful, every moral judgment is moralization, every ideological-form program is fundamentalist, or every distributed bigOther is a multi-mind-self. Each transition is a separate empirical question. The theory predicts greater field synchronization and enforcement when signals are publicly observable, refusal or target status is morally interpreted, sanctions are credible, rival affiliation is treated as betrayal, and institutions preserve the resulting classifications. Evidence that these variables do not affect propagation, apparent consensus, retention, exclusion, or jurisdiction would weaken the mechanism.

9. First analogy: the computer with one PCI slot

The computer analogy presents the architecture in its simplest form.

Imagine a computer containing:

- a powerful general-purpose **CPU**;
- one **PCI slot**;
- a comparatively simple sentiment-classification card installed in that slot;
- a network interface through which the card exchanges signals with compatible cards.

The CPU performs complex computation. The PCI card does something much simpler: it assigns values to the CPU's current objects and possible outputs. It marks them, in effect, as attractive or aversive, honourable or shameful, legitimate or forbidden.

The card's simplicity is deceptive. If it can alter the CPU's priorities, error signals, and reward expectations, it can redirect the much more powerful processor. A simple evaluator can cause an extremely intelligent CPU to spend enormous resources defending a premise the evaluator has made emotionally non-negotiable.

The card runs a mythological lens shaped by many mythologies and potentially assembled from several compatible programming packages. Social signals usually do not install a whole new lens; they call mappings already present on the card. Because the machine has only one PCI slot, a rival card cannot simply be added beside the first, and there is no hidden runtime controller that ranks parallel cards. Compatible packages can extend the software on the installed card. An incompatible governing program must be rejected, or the incumbent program must be unbraided and a successor rebraided and installed on the one card.

This analogy makes the division of labour between the two processors easy to understand. Its limitation is that real human cognition is embodied, affective, interpretive, and less cleanly modular than a desktop computer.

10. Second analogy: Haidt's elephant with a wireless collar

The second analogy gives a closer picture of the proposed psychological operation.

Jonathan Haidt describes conscious reasoning as a **rider** sitting on an **elephant**. The elephant represents the large, fast, intuitive, emotional, and mostly nonconscious part of the mind. The rider represents the smaller conscious and verbal part that explains, plans, and sometimes guides the elephant, but frequently rationalizes where the elephant is already going.

Culture mechanics adds a **wireless collar** around the elephant's neck.

- The **elephant** is the person's intuitive, motivational, and largely nonconscious psychology.
- The **rider** is conscious verbal awareness and explicit reasoning.
- The **processor in the wireless collar** is the bigOther.
- The **program stored in the collar** is the mythological lens.
- The **mythologies** are the evaluated stories through which that program is trained and reinforced.
- The **wireless signals** are other people's expressions, symbols, slogans, rituals, approval, disapproval, and visible conduct.

The collar can produce social pleasure and pain: pride, shame, belonging, exclusion, sacredness, disgust, reassurance, fear, or indignation. It acts directly upon the elephant. The elephant changes its posture, attention, and direction long before the rider clearly notices the collar's intervention.

Only afterward may the rider become aware of a conclusion:

"This is obviously disgraceful."

"Someone like me cannot do that."

"Any decent person must support this."

The rider may mistake the resulting feeling for the product of independent reasoning. It may then use the main processor's verbal intelligence to justify the direction in which the elephant has already begun to move.

This analogy is closer to the psychological claim than the computer analogy because it shows that the bigOther does not normally dictate complete thoughts. It modifies the affective conditions under which thought and action occur.

For the mapped features, non-inferences, and relationship of the CPU, PCI-slot, wireless-collar, protocol, and network pictures to the framework's physical and craft analogies, see [Analogical Models in Culture Mechanics: A Semantic Inventory](#).

11. The wireless superpower: the individual coupling interface

The bigOther's distinctive superpower is its capacity to participate in **distributed computing**. Every collar is both receiver and transmitter. There is no separate class of persons possessing the only transmitters. People emit social signals through:

- facial expression, posture, and tone;
- attention or deliberate inattention;
- laughter, applause, chanting, or silence;
- confidence, fear, disgust, or outrage;
- repetition of phrases;
- imitation and conformity;
- approval, ridicule, punishment, and protection;
- participation in or refusal of rituals.

These outputs become inputs for other collars:

```
Person A receives a publicly intelligible signal
↓
A's bigOther classifies it
↓
A's elephant changes state
↓
A expresses the resulting state through the shared protocol
↓
B and C receive A's expression
↓
their bigOthers classify and respond
↓
their responses return as signals to A
○
```

The originating physical analogy is that a local bigOther resembles a charged particle: it is a source of a field and is simultaneously susceptible to the field produced by other sources. The comparison concerns relational architecture

and back-action. It does not propose a new physical force or claim that social dynamics obey Maxwell’s equations. When participants run sufficiently compatible mythological lenses and can observe one another, reciprocal feedback can produce rapid alignment. A crowd may begin to attend, feel, chant, fear, celebrate, condemn, or act as if it were one body. This is the individual-to-field handoff. The field’s topology, unequal transmitter gain, collective agency, and epistemic consequences belong to the detailed account in *Epistemic Agency under Mechanical Solidarity*.

12. Local bigOther, symbolic protocol, and distributed field

Culture mechanics distinguishes five levels that must not be treated as synonyms:

Level	Meaning in culture mechanics
Lacan’s big Other	The shared symbolic order and, in the present functional translation, the on-the-wire protocol of language, law, roles, conventions, master signifiers, and recognized symbolic authority.
Local bigOther	The individual sentiment classifier that executes one installed mythological lens and transmits and receives through the shared protocol.
Mechanical solidarity	Emergent field coherence generated as compatible local bigOthers repeatedly produce, observe, and answer common classifications and sentiments.
Distributed bigOther	The dynamically maintained symbolic-affective network state reproduced through local bigOthers, institutions, roles, practices, stories, and artifacts.
Multi-mind-self	The distributed system when it becomes sufficiently integrated and continuous to perceive, remember, judge, intend, own, and act as a collective agent. Not every crowd or mechanically solidary field reaches this threshold.

The relationship is generative rather than an equation:

The distributed bigOther consists of no single person or object. It is realized through language, expectations, public symbols, rituals, stories, institutions, roles, laws, artifacts, and the anticipated judgments of other people. It is implemented through individuals but, as an emergent relational organization, is not adequately explained as a mere list of independently formed individual psychologies.

The relation remains recursive:

Culture is neither wholly outside nor wholly inside the person. It is the comparatively stable pattern maintained by this circulation between local programming and distributed execution. First-order and **lifted mechanical solidarity** differ in the abstraction level of their shared classifications, not in this basic field-forming mechanism. *Epistemic Agency under Mechanical Solidarity* develops that distinction together with field geometry, collective ownership, gatekeepers, and back-action upon epistemic agency.

Nested authorship, activation, and episodic multi-mind-selves A multi-mind-self is a **network-level subject**, not a second local self or a second PCI card installed inside each participant. Collective and personal authorship can therefore coexist at different levels. The collective can legitimately perceive, remember, decide, own, and act as we while participating persons retain legitimate *Is*, differentiated functions, consciences, judgments, relationships, property, and bounded rights of refusal and exit.

A differentiated multi-mind-self adds an operative we without invalidating the participating Is. Fusion begins when the we displaces those Is as independently legitimate authors.

The definition is functional and emergent. It does not reduce the collective to a mere metaphor or list of individual states: the organized relation has continuing capacities and acts back upon its participants. It also does not by itself assert one unitary field of phenomenal consciousness analogous to a biological person's experience. Whether collective phenomenal subjectivity exists is a further and much harder claim than whether the distributed organization qualifies as an agent.

The relevant integration can have different temporal profiles. A continuing multi-mind-self may operate mainly through differentiated clockwork coordination and enter intermittent high-gain laser episodes. An **episodic multi-mind-self** crosses the collective-agent threshold only during bounded periods of sufficient common attention, coupling, reciprocal feedback, memory access, judgment, and coordinated action. Between episodes, institutions, calendars, roles, artifacts, places, stories, and trained local bigOthers may preserve a **latent distributed bigOther** below the presently active multi-mind-self threshold.

Calling this latency "sleep" is useful only when viable reactivation machinery and identity-bearing continuity remain. A de-animated remnant or culturally lost synchronization technology is not merely a sleeping collective self. The detailed state model and its pilgrimage, military, and Subak boundary cases belong to *Epistemic Agency under Mechanical Solidarity*, "Activation profiles and episodic multi-mind-selves".

Differentiated unity and subjecthood absorption (fusion) The existence or strength of a collective agent does not decide what standing its members retain. Culture mechanics calls a real shared **we** **differentiated unity** when distinct persons, functions, judgments, relationships, and legitimate subordinate jurisdictions remain constitutive parts of the common order. The qualifier **person-preserving unity** emphasizes the same boundary: unity is not mere coexistence, but neither does membership dissolve the participating subjects.

Subjecthood absorption (fusion) is the independent extent to which a collective program treats its members as organs whose personal judgment, conscience, purpose, property, loyalties, identity, relationships, refusal, or exit have no legitimate standing against the collectively enacted subject. Equivalently, fusion is the displacement or absorption of the person's self as an independently legitimate author, so that another enacted self increasingly perceives, judges, speaks, owns, and acts through that person. The person's biological body, main processor, skills, memory, and practical intelligence need not disappear; they can remain active as the collective subject's execution surface. The eye still sees, the mouth still speaks, and the hand still acts, but the collective claims the standing to determine for whom and for what they act.

Subjecthood absorption is not identical to high cultural interoperability, strong synchronization, multi-mind-self agency, comprehensive local slot occupancy, or a large jurisdiction. Those properties can contribute to it, but none defines it.

The principal dynamics increasing absorption are called **fusion pressure**:

- one selected alignment is generalized across more domains and maintained beyond the task or episode that made it useful;
- independent judgment and differentiated contribution are reclassified as noise, selfishness, alienation, impurity, or betrayal;
- personal, household, professional, associational, and institutional jurisdictions are subordinated to one collective purpose;

- the collective's classifications become compulsory while correction, refusal, exit, and appeal lose legitimate standing.

Total fusion is the limiting case: high subjecthood absorption combines with comprehensive jurisdiction and closed correction or exit. The originating image is that persons become “drops of water in one clear pond.” It is a pole, not the definition of every multi-mind-self and not a biological state that humans can literally enter.

A **fusion ideology** is a mythology or program that treats the separate person as an incomplete, alienated, or falsely conscious fragment and seeks to reconstitute persons as organs of one collectively enacted subject with increasingly comprehensive jurisdiction. Such a program can demand fusion without succeeding in forming a competent multi-mind-self; conversely, a capable collective agent can remain differentiated, person-preserving, jurisdictionally bounded, and corrigible.

These distinctions add a **subjecthood-absorption axis** to analysis without altering the single-slot principle. Every participant still has one fully occupied local slot. The question is what standing the installed weave grants the person within the collective relation, not how many evaluators occupy that slot.

13. Symbolic reality

The bigOther does not merely evaluate an independently completed physical world. It also participates in creating **social reality**.

A piece of cloth becomes a flag. A person becomes a judge, citizen, traitor, hero, or martyr. An utterance becomes a promise, verdict, oath, insult, or declaration of war. A place becomes sacred. A relationship becomes a marriage. An individual becomes the bearer of rights and dignity.

These properties are not inherent physical properties, but neither are they merely private fantasies. They are real insofar as people and institutions collectively recognize and act upon them. Symbols, rituals, and authorized classifications therefore do not only represent society; their execution helps constitute society.

Culture mechanics calls attention to both directions:

1. society programs the local bigOther; and
2. locally classified action reproduces or transforms society.

14. The full culture-mechanical cycle

The complete process can be summarized as follows:

```

SLOW CULTURAL FORMATION AND PROGRAMMING
endogenous formation and/or attempted purposive construction
stories + symbols + systems + rituals
+ leadership + rewards + sanctions + experience
      ↓
MYTHOLOGIES
individual socially evaluated stories
      ↓
MYTHOLOGICAL LENS
the single local evaluative mapping program
      ↓
BIGOTHER
fast execution and sentiment classification
      ↓
ELEPHANT
attention + intuition + motivation + bodily readiness
      ↓
RIDER AND MAIN CPU
verbalization + explanation + planning + possible criticism
      ↓
VISIBLE ACTION AND COMMUNICATION
      ↓
ENCODING IN SHARED SYMBOLIC PROTOCOL
words + gestures + symbols + roles + sanctions

```

This cycle deliberately stops at the individual-to-field boundary. *Epistemic Agency under Mechanical Solidarity* asks how the emergent field acts back upon judgment, distributes authority, and supports or suppresses epistemic agency.

15. Open and closed cultural programming

Culture mechanics is descriptive before it is normative. The same mechanisms can support an open society or a closed total community.

A **closed cultural program** forms a mythological lens that teaches the bigOther to reward:

- unanimity and obedience;
- one overriding identity;
- submission to a central authority;
- denunciation of deviants;
- conflation of factual truth with political loyalty;
- exclusion of competing institutions and sources;
- treatment of counterevidence as betrayal or pollution.

An **open cultural program** forms a mythological lens that teaches the bigOther to value second-order norms:

- every person possesses dignity;
- opponents remain legitimate members of society;
- disagreement is not automatically betrayal;
- respect for a person does not require agreement with every claim;
- evidence may correct belief;
- authority may be criticized;
- compromise can be honourable;
- multiple institutions and affiliations must remain independent;
- no person or institution may become the sole authorized voice of the bigOther.

On the single-slot model, pluralism does not mean having no shared programming or installing one independent evaluator for each affiliation. It means that one open weave can be a fully installed lifted meta-program whose shared generator admits different context-sensitive first-order outputs. Its concrete surface can vary without its authority being weaker or local: the binding sameness lies in the rules by which answers are generated, tested, applied, and revised. These rules are not a higher runtime judge ranking several bigOthers; generator and outputs form one weave. Detailed cases and boundary tests are developed in *Epistemic Agency under Mechanical Solidarity*.

16. Autonomy, capture, and susceptibility

Culture mechanics does not define autonomy as the absence of a bigOther. Language, morality, identity, and social cooperation all require cultural formation. Nor is autonomy the installation of a second bigOther to overrule the first. The relevant question is whether the main processor can inspect and revise the one installed lens and the bigOther's classifications. Autonomy is therefore compatible with full capture: it names an operative weave whose binding rules protect the main processor's capacity to inspect and revise its classifications, not incomplete programming or escape from the slot.

In an autonomous configuration, a person can:

- distinguish affective certainty from evidence;
- notice shame, disgust, or group pressure as signals rather than proofs;
- compare inherited classifications with direct experience;

- tolerate disagreement and temporary dissonance;
- question the authority that supplied a classification;
- revise the mythological lens when its classifications contradict evidence or experience.

Every installed program governs classification, and a lifted program necessarily has meta-authority over first-order jurisdictions. **Pathological capture** begins not with governing authority as such but when the weave or its representatives become uncorrectable, monopolize authorized interpretation, exceed their constituted jurisdiction, or claim **epistemic sovereignty**—that reality must answer to authorization rather than authorization to reality. The bigOther then determines which perceptions, questions, relationships, and feelings the main CPU may treat as legitimate. Intelligence remains available, but is recruited to implement or defend the installed lens.

Full capture can integrate an already compatible package, but capture by an incompatible governing worldview requires replacement. Authorities, sanctions, rituals, relationships, and field back-action must loosen the incumbent weave’s load-bearing bindings, make detachment or reinterpretation survivable, and help rebraid one successor. Conversely, counter-relations and reality contact can protect or repair the incumbent weave without acting as a second evaluator. A rival successor is not pathological merely because it replaces an incumbent; its corrigibility and authority relations must be assessed independently.

Susceptibility to such capture is not treated as a single scalar trait. It can involve different degrees of:

- programmability through narratives and exemplars;
- sensitivity to approval, rejection, and unanimity;
- ease of synchronization with a group;
- identity dependence;
- affective charge and internalization;
- resistance to counterevidence;
- difficulty of reprogramming;
- practical ability to dissent or leave.

17. Synonyms and terminological neighbours of the bigOther

There is no established term that is an exact synonym for the **bigOther** as culture mechanics defines it. The term deliberately combines a local sentiment classifier, its culturally learned programming, its relation to the symbolic order, and its capacity for distributed synchronization. Existing concepts usually name only one of these aspects.

The closest everyday term is **conscience** (*Gewissen*), provided that it is understood as an affectively active moral evaluator rather than as a little rational judge inside the mind. Conscience marks conduct and even contemplated conduct with approval, guilt, shame, obligation, or prohibition. In that respect it performs part of the bigOther’s sentiment-classification function.

Conscience is nevertheless narrower than the bigOther. The bigOther also classifies status, belonging, legitimacy, loyalty, sacredness, pollution, identity, and social danger, including cases that are not ordinarily described as matters of conscience. Conversely, conscience can include deliberate moral reflection performed by the main CPU, whereas the bigOther refers specifically to the fast culturally programmed evaluator that influences such reflection. Culture mechanics can therefore distinguish a **socially authored conscience**, whose judgments are largely supplied by the surrounding field, from a more **self-authored conscience**, whose inherited classifications can be examined and deliberately endorsed, rejected, or revised.

Neighbouring term	Main overlap with the bigOther	Important difference
Lacan’s big Other	The prior symbolic order of language, law, roles, authority, and socially intelligible meaning; functionally, the shared protocol through which local states become publicly legible.	It is the source term, but Lacan did not describe a literal local co-processor, PCI card, or the full on-the-wire analogy. Culture mechanics adds that implementation and translation.
James’s felt objective presence	A reality or unseen order may be experienced as objectively present and conduct-directing.	It illuminates bigOther-presence phenomenologically but does not specify its local processor, cultural program, or network mechanism.

Neighbouring term	Main overlap with the bigOther	Important difference
Buber's I-Thou relation	Another is encountered in a second-person relational mode rather than as an object.	It illuminates bigOther-as-Thou but must not be reduced to social programming; Buber's eternal Thou is not the culture-mechanical bigOther.
Conscience / Gewissen	Internal moral approval, guilt, shame, obligation, and prohibition.	It is the closest ordinary-language partial synonym, but is narrower than the bigOther and can also include reflective moral judgment by the CPU.
Superego	Internalized authority, prohibitions, ideals, guilt, and demands placed upon the self.	It emphasizes a psychoanalytic intrapsychic agency, often especially its punitive aspect; it does not by itself denote the full symbolic network or distributed computation.
Generalized other	George Herbert Mead's organized attitudes and expectations of a community that a person learns to take toward the self.	It closely describes the social standpoint represented locally, but not the proposed dual-processor architecture or its primitive affective interface.
Collective conscience / collective consciousness	Durkheim's shared beliefs and sentiments, with their moral authority over group members.	It is closest to the distributed bigOther; it does not isolate the local sentiment-classification unit through which collective sentiments become personally operative.
Internalized norms, moral schemas, and moral identity	Learned evaluative rules, expectations, and identity commitments.	These are components of the mythological lens executed by the bigOther rather than names for the processor, the narrative corpus, and the network together.
Habitus	Social history embodied as durable perception, feeling, and action dispositions.	It is broader than moral-social classification and does not posit a single-slot evaluator or a separate general-purpose CPU.
Socialized mind and ego development	Describe developmental relations to social expectations, internal standards, and one's own meaning-making system.	They describe organizations or levels of the whole person, not an additional processor. They are developmental neighbours of the bigOther, not synonyms for it.

The vocabulary should therefore be used with the following rule:

Conscience, superego, generalized other, collective conscience, felt objective presence, and I-Thou relation each illuminate an aspect of the bigOther; none alone names the complete culture-mechanical construct.

18. Development of the bigOther: Kegan and Loevinger

Culture mechanics treats the bigOther as developmentally variable. A person is not born with a completed mythological lens. Social evaluation is first encountered through attachment, imitation, direct reward and punishment, and dependence on caregivers. It is then internalized as group-authored conscience and may later become available for self-authorship and reflective revision.

[Robert Kegan's constructive-developmental theory](#) and [Jane Loevinger's ego-development research](#) provide the closest developmental models found in the surrounding conversations, but neither proposed a bigOther. Kegan's subject-object theory describes increasingly complex **forms of mind** or **meaning-making**, not merely moral conscience. Loevinger's theory describes development of the **ego** across impulse control, character, interpersonal

understanding, conscious preoccupations, and moral evaluation. The culture-mechanical model below is consequently a synthesis and translation, not a claim that either theorist described the wireless collar.

The key developmental question is:

Is the mythological lens something the person can look at and revise, or is it the unquestioned lens through which the person looks?

This is Kegan's subject-object distinction applied specifically to cultural sentiment classification. What remains **subject** to a person has the person: it organizes experience but cannot yet be examined as an object. What becomes **object** can be noticed, compared, evaluated, and acted upon. Development of the bigOther therefore does not primarily mean that the collar becomes stronger. It means that the homo-duplex system gains a more complex and reflective relation to the lens stored in the collar.

A four-phase culture-mechanical model

Culture-mechanical phase	Closest Keganian neighbour	Closest Loevingerian neighbour	Relation to the bigOther
1. Installation and external regulation	Impulsive and instrumental forms of mind	Impulsive and Self-Protective stages	Social control is experienced mainly through immediate attachment, advantage, reward, retaliation, and punishment. A stable moral-social lens is still being installed; much of its authority remains visibly outside the person.
2. Socially authored bigOther	Socialized Mind	Conformist and transitional Self-Aware levels	Group expectations, authorities, relationships, and accepted roles become internally binding. The person can subordinate impulse to shared rules, but has difficulty standing apart from the social field that defines what ought to feel admirable, shameful, loyal, or forbidden. Borrowed judgment is experienced as one's own obvious conscience.
3. Self-authored bigOther	Self-Authoring Mind	Conscientious stage	The person constructs an internal code and can use it to evaluate competing external demands. The main CPU can identify, endorse, and deliberately revise at least some mappings in the installed lens. The bigOther remains present, but its lens is increasingly governed from within rather than continuously authored by the current group.

Culture-mechanical phase	Closest Keganian neighbour	Closest Loevingerian neighbour	Relation to the bigOther
4. Self-transforming bigOther	Self-Transforming Mind	Individualistic transition, Autonomous stage, and the rare Integrated stage	The person can take even a self-authored value system as object, recognize its partial and constructed character, tolerate conflicts among frameworks, and revise the meta-rules by which classifications are made. The lens can include its own corrigibility without dissolving all commitments.

These are correspondences, not one-to-one equations. In particular, Loevinger's **Conscientious** stage is not simply "having a conscience"; it is a comparatively developed organization characterized by self-evaluated standards, responsibility, long-term goals, and evaluation of rules rather than mere acceptance of group rules. Her **Individualistic** level is a transition from Conscientious to Autonomous, and the Autonomous and Integrated levels add tolerance of inner conflict, ambiguity, interdependence, and increasingly integrated identity. Kegan describes a related shift in different terms: from being authored by relationships and the surrounding culture, to authoring an internal system, to being able to inspect the limitations of that system itself.

Development under the single-slot principle Development does not install additional bigOthers beside the first one. The computer still has one PCI slot, one operative sentiment-classification architecture, and therefore one fully occupied slot. What changes is the person's relation to the installed card and, during lifting, the order of the rules it runs:

```

EXTERNALLY ENFORCED LENS
the environment supplies immediate reward and punishment
      ↓
SOCIALLY AUTHORED LENS
the group's judgments operate internally as obvious conscience
      ↓
SELF-AUTHORED LENS
the person can evaluate social demands through an internal code
      ↓
SELF-TRANSFORMING LENS
the person can inspect and revise even the code and its meta-rules

```

A self-transforming person can represent several moral systems in the main CPU, translate between them, and understand each from within. This does not require several PCI cards running independently or a higher evaluator that ranks them at runtime. Until reconstruction occurs, one local bigOther still executes one operative lens. The developmental achievement is that the person can treat this present lens as partial, corrigible, and open to deliberate repair, compatible extension, unbraiding, or replacement.

Self-transformation can therefore unbraid a first-order program whose concrete answers are treated as final and rebraid one lifted program in which binding meta-rules generate, select, apply, and revise concrete answers. First-order religious, professional, familial, political, or local packages need not vanish; their particular rules and conclusions remain within the successor weave as outputs or bounded packages answerable to its generator. This is full lifted capture, not a neutral evaluator standing above culture.

Nor does greater autonomy require disconnection from distributed computing. The socially authored person is especially liable to be synchronized by whichever reference group carries authority. The self-authoring person can choose commitments and networks from an internal standpoint. The self-transforming person can participate in collective life without assuming that any single network exhausts reality, and can sometimes translate between networks without simply fusing with either one.

The “less than 1%” claim The recollection that the most developed Keganian form occurs in fewer than one percent of adults is supported, with an attribution caveat. A peer-reviewed account by Lars Bauger, Rob Bongaardt, and Jack J. Bauer reports that, **according to Kegan and Lahey (2009)**, approximately 80–90% of adults make meaning between the Socialized and Self-Authoring levels, while the Self-Transforming Mind is “seldom seen (less than 1%).” The estimate is therefore appropriately attributed to **Kegan and Lahey’s framework**, while the directly checkable wording appears in [Bauger, Bongaardt, and Bauer’s 2021 article](#).

This figure should be treated as a reported developmental estimate, not as a population census, a biological constant, or a direct measurement of the bigOther. It concerns Kegan’s highest whole-person meaning-making structure. Culture mechanics translates that structure into the capacity to take one’s own mythological lens as object; it does not claim that Kegan measured a collar processor or that exactly the same percentage applies across all societies and methods.

Developmental cautions Developmental complexity is not identical to intelligence, factual correctness, kindness, mental health, or moral worth. A powerful CPU does not guarantee a self-authored relation to the bigOther. Conversely, a self-authored person can construct and defend a cruel or epistemically contaminated code. Development describes increasing capacity to author and inspect a framework; the content and consequences of that framework must still be evaluated independently.

The highest phase should also not be understood as the disappearance of conscience. Its defining feature is **reflective ownership without finalization**: the person can retain commitments, feel moral sentiments, and participate in a culture while knowing that the framework producing those classifications is neither infallible nor complete.

19. Cross-references to closely related concepts

The following concepts overlap with parts of culture mechanics without being synonyms for the theory as a whole.

Affect Control Theory and BayesACT **Affect Control Theory** (ACT) and its probabilistic extension **BayesACT** provide a formal computational neighbour to the culture-mechanical account of the mythological lens. ACT models culturally learned affective meanings—called **fundamental sentiments**—attached to identities, actions, and settings. An observed social event produces a **transient impression**, which is compared with these culturally expected meanings. The resulting discrepancy is called **deflection**. Deflection generates pressure toward emotion, reinterpretation, identity adjustment, or corrective action that restores affective consistency.

The correspondence is:

Culture mechanics	ACT/BayesACT
Mythological lens	Culturally learned fundamental sentiments and impression-formation rules.
Real-world observation or event	An observed actor–behaviour–object event producing a transient impression.
bigOther classification	Comparison of the transient meaning with culturally expected meaning.
Affective signal	Confirmation or deflection—the discrepancy between expected and observed meaning.
Resulting response	Emotion, reinterpretation, identity adjustment, or corrective action.

[BayesACT](#) adds uncertain beliefs about identities and situations, Bayesian updating, explicit goals, and decision-theoretic action selection. In culture-mechanical terms, it offers one possible formalization of how an installed cultural mapping could combine with an observation to produce affective confirmation or error and consequent pressure on feeling and action:

This is a cross-reference rather than a foundation of culture mechanics. ACT and BayesACT do not propose a separate bigOther, a single PCI slot, mythological narrative programming, or distributed synchronization. They also do not explain how mythologies initially form the mythological lens. BayesACT’s instrumental action selection extends beyond the primitive sentiment-classification function assigned to the collar and overlaps with planning functions that culture mechanics assigns to the main CPU.

Stanovich’s rationality framework Keith E. Stanovich, Richard F. West, and Maggie E. Toplak distinguish rationality from intelligence and describe cognition with a **tripartite model**:

- The **autonomous mind** produces rapid, automatic, highly practised, or evolutionarily prepared responses.
- The **algorithmic mind** supplies computational capacity for sustained processing, inhibition, and cognitive simulation. Conventional intelligence tests primarily track capacities at this level.
- The **reflective mind** concerns goals, epistemic values, thinking dispositions, and the decision to initiate reflective processing or override a default response.

This tripartite division should not be mapped one-to-one onto homo duplex. In culture mechanics, all three Stanovichian minds describe operations performed within the ordinary brain—the main cognitive system represented by the CPU, elephant, and rider. The bigOther is an additional functional distinction: a culturally programmable sentiment classifier coupled to that system.

The most faithful architectural mapping is:

Stanovichian term	Function in Stanovich’s model	Closest culture-mechanical location
Autonomous mind	Generates fast default responses	Part of the main brain and especially the elephant; it is influenced by, but is not identical to, the bigOther.
Algorithmic mind	Supplies computational power, decoupling, inhibition, and simulation	The processing power of the main CPU.
Reflective mind	Establishes goals and epistemic dispositions and initiates override	The governing and self-corrective activity of the main CPU, represented partly by the rider.
Mindware	Provides learned knowledge, rules, procedures, and strategies for reasoning	General acquired programming available to the main CPU; mythologies may carry mindware, while their culturally evaluative lessons can be compiled into the bigOther’s mythological lens.

This prevents two misleading equations:

- The autonomous mind is **not** the bigOther.
- Mindware in general is **neither a mythology nor the mythological lens**.

Probability theory, falsification, causal reasoning, and decision rules are mindware used by the main CPU without necessarily belonging to the bigOther. A mythology is a culturally evaluated story and may carry many kinds of mindware. The mythological lens is narrower than mindware in general: it is the mapping distilled from many mythologies that organizes social identity and sentiment classification.

Mindware gaps and other rationality failures A **mindware gap** exists when a person lacks a learned rule or body of knowledge required for rational judgment. Someone may possess ample algorithmic capacity but not understand base rates, regression to the mean, falsification, or probabilistic reasoning. In culture-mechanical language, the main CPU is powerful enough, but lacks the corrective program needed to evaluate or override a default response.

Stanovich’s taxonomy separates this from several other failures:

Failure	Stanovichian description	Culture-mechanical translation
Cognitive miserliness	Reflective processing is not initiated; an easy default is accepted.	The CPU does not spend the effort needed to inspect the elephant's response or the collar's classification.
Override failure	Reflective processing begins and relevant mindware exists, but the default response is not successfully suppressed.	The CPU detects a problem but fails to overcome the elephant's or bigOther's strongly weighted response.
Mindware gap	The alternative knowledge or rule needed for a rational response is absent or insufficiently learned.	The CPU lacks the epistemic tool needed to correct the response.
Contaminated mindware	Acquired mindware itself causes irrational belief or action.	In the culture-mechanical use developed here, the bigOther executes a defective lens that generates misdirecting sentiments and protects its mappings from evaluation.

These failures can combine. A contaminated bigOther may discourage the reflective mind from initiating inspection, make affective override more difficult, and prevent missing corrective mindware from being learned.

Contaminated mindware as a badly programmed bigOther In Stanovich's framework, **contaminated mindware** is acquired mindware that directly causes irrational belief or action—either by reducing epistemic accuracy or by thwarting effective goal pursuit. It can include superstitious thinking, antiscience attitudes, conspiracy beliefs, dysfunctional personal beliefs, misleading causal models, and culturally conditioned misinformation.

Stanovich gives special attention to mindware containing **evaluation-disabling properties**. Such mindware keeps itself lodged in a host by attaching punishment to questioning, rewarding unquestioning acceptance, or making itself unfalsifiable. This aspect provides the strongest direct bridge to culture mechanics because punishment, reward, and protected sacredness are operations of the bigOther's sentiment-classification system.

Following the present theory's guidance, culture mechanics adopts the term in this more specific functional sense:

Contaminated mindware is a badly programmed bigOther: contaminated mythologies have shaped a defective mythological lens whose classifications attach strong sentiments to thoughts and evidence in ways that systematically misguide the main CPU.

The defective lens may mark:

- a false claim as sacred truth;
- honest doubt as betrayal;
- reliable evidence as enemy contamination;
- asymmetric scrutiny as moral vigilance;
- cruelty as righteous duty;
- correction as humiliation or surrender;
- loyalty to a source as a substitute for evaluating its claims.

The contamination lies in both **content** and **control**. Individual mythologies can carry misleading claims, roles, causal explanations, or anti-evaluation procedures. Repetition compiles those lessons into a defective lens, while the bigOther executes the lens and thereby determines how entertaining, questioning, revising, or rejecting them feels. Pride, shame, sacredness, belonging, authority, disgust, fear, and anticipated punishment protect the defective lens.

The resulting causal sequence is:

```

CONTAMINATED BIGOTHER PROGRAMMING
misleading mythologies + evaluation-disabling procedures
      ↓
DEFECTIVE MYTHOLOGICAL LENS
misdirected mappings from observations to values and feelings

```

The phrase “wrong direction” should be tied to Stanovich’s standards of rationality rather than merely to disagreement with an observer. A bigOther is contaminated when its lens systematically impairs:

- **epistemic rationality:** forming beliefs that are appropriately calibrated to evidence and reality; or
- **instrumental rationality:** acting effectively in pursuit of the person’s considered goals.

Political, religious, or moral disagreement alone is not evidence of contaminated mindware. The diagnosis requires such features as demonstrable epistemic failure, goal-thwarting consequences, asymmetric standards, or procedures that disable evaluation.

The extension and its boundary The synchronization can now be stated precisely:

- **Stanovich supplies the cognitive pathology:** harmful acquired knowledge and strategies can cause irrationality even when computational intelligence is adequate.
- **Culture mechanics assigns that pathology a location in its dual architecture:** when contaminated mindware is cultural, identity-laden, and affectively enforced, it becomes part of a defective mythological lens executed by the bigOther.
- **Culture mechanics adds a causal interface:** the contaminated bigOther misguides the main CPU by attaching strong feelings to its thoughts and possible conclusions.
- **Culture mechanics adds a distributed mechanism:** networked bigOthers reward, punish, repeat, and synchronize contaminated mythologies and lens mappings across people.
- **Motivated or myside reasoning is usually downstream:** the main CPU is recruited to protect the direction already weighted by the bigOther.

This is a faithful extension, not a claim that Stanovich proposed a bigOther, a wireless collar, homo duplex, or distributed cultural computation. His category is broader: contaminated mindware need not always be socially synchronized or strongly affective. Culture mechanics deliberately concentrates on the subset for which the acquired contamination has entered the mythological lens of the sentiment classifier.

Conversely, not every mythology produces contaminated mindware, and no single story normally determines an entire lens. Mythologies can instead teach intellectual honesty, falsifiability, evidential symmetry, uncertainty, and willingness to revise. An open culture can thereby form a lens that makes reality-oriented conduct feel honourable and correction tolerable rather than misdirecting the CPU away from them.

Dysrationalia **Dysrationalia** is Stanovich’s term for irrational thought or behaviour despite adequate intelligence. It is closely related to the homo-duplex thesis because it rejects the assumption that a powerful main CPU guarantees rational judgment.

Culture mechanics proposes one possible social-affective pathway to dysrationalia: the bigOther can set priorities, prohibit questions, or make accurate revision socially painful while leaving general intelligence intact. Dysrationalia is nevertheless broader. It can also result from mindware gaps, cognitive miserliness, poor thinking dispositions, or failures to initiate reflective processing.

Motivated reasoning **Motivated reasoning** is the tendency for desired conclusions, identities, loyalties, or emotional needs to influence how evidence is sought, interpreted, remembered, and evaluated.

In culture mechanics, motivated reasoning is not itself the bigOther. It is what the main CPU may do after the bigOther has marked one conclusion as honourable, safe, identity-preserving, or socially rewarded and another as

shameful, dangerous, or disloyal. The CPU's power can then increase the sophistication of the rationalization rather than correct its direction.

Not every instance of reasoning from one's existing perspective is irrational. Prior beliefs may deserve evidential weight, and revising an established model has real cognitive costs. The culture-mechanical concern is the narrower case in which the bigOther enforces asymmetric or evaluation-disabling treatment of evidence and thereby reduces epistemic or instrumental rationality.

Identity-protective cognition **Identity-protective cognition** is motivated reasoning specifically directed toward protecting membership, status, or alignment within an identity-defining group. It is one of the closest empirical neighbours of the wireless-collar model.

The bigOther supplies an internalized audience and asks, in effect:

What would accepting this evidence say about who I am, whose side I am on, and whether I still belong?

The person may consequently reject an accurate conclusion not because it exceeds the main CPU's capacity, but because accepting it would trigger shame, loss of status, or symbolic expulsion.

Moral conviction, sacred values, and taboo trade-offs **Moral conviction** occurs when a preference or belief is experienced as a matter of fundamental right and wrong rather than negotiable interest. A **sacred value** is protected from ordinary comparison or exchange. A **taboo trade-off** is a comparison whose mere consideration is treated as morally offensive.

These concepts describe classifications produced by the bigOther when it assigns exceptional moral authority to an object or rule. They help explain why compromise can feel like corruption and why cost-benefit reasoning can provoke outrage rather than deliberation. They also distinguish an ordinary strong preference from programming that determines what the main CPU is permitted even to compare.

Actively open-minded thinking and epistemic autonomy **Actively open-minded thinking** is the disposition to search for reasons one may be wrong, consider alternatives, apply standards symmetrically, and revise beliefs in response to evidence. It is a form of healthy mindware and a partial operational counterpart to what culture mechanics calls **epistemic autonomy**.

Epistemic autonomy does not require the absence of a bigOther. It requires a mythological lens that permits the main CPU to inspect the bigOther's outputs and that does not convert doubt, correction, or uncertainty automatically into shame and betrayal.

Actively open-minded thinking predicts resistance to many reasoning errors and forms of contaminated mindware, but it should not be treated as a universal antidote. Stanovich's work finds myside bias unusually resistant to prediction by intelligence and, in several paradigms, by actively open-minded-thinking measures themselves.

Master signifiers In Lacanian terminology, a **master signifier** is a privileged signifier that organizes other meanings and identifications. Words such as *Nation, Justice, Science, Tradition, Safety, Freedom, or Revolution* can function in this way.

A master signifier is not inherently contaminated. It becomes a carrier of contaminated mindware when invoking it terminates evaluation rather than organizing an inquiry—for example, when "Science" changes from the name of a corrigible method into an authority token that makes further judgment impermissible.

In the wireless-collar and protocol analogies, a master signifier is a **highly compressed protocol token**. It indexes a large package of already installed mythologies, classifications, authorities, identities, sentiments, and expected conduct without restating them. This explains both its efficiency and its danger: participants can coordinate through a short token, but the expansion it activates may remain unspoken and therefore difficult to inspect.

Bonhoeffer's Dummheit Dietrich Bonhoeffer's 1943 reflection "[Von der Dummheit](#)" ([PDF of the complete section](#)) is the starting point of the culture-mechanics theory. It posed the originating questions: **What causes this Dummheit? How does it work?**

The German original reads:

Jede starke äußere Machtentfaltung, sei sie politischer oder religiöser Art, schlägt einen großen Teil der Menschen mit Dummheit. Ja, es hat den Anschein, als sei das geradezu ein soziologisch-psychologisches Gesetz. Die Macht der einen braucht die Dummheit der anderen. Der Vorgang ist dabei nicht der, dass bestimmte – also etwa intellektuelle – Anlagen des Menschen plötzlich verkümmern oder ausfallen, sondern dass unter dem überwältigenden Eindruck der Machtentfaltung dem Menschen seine innere Selbständigkeit geraubt wird und dass dieser nun – mehr oder weniger unbewusst – darauf verzichtet, zu den sich ergebenden Lebenslagen ein eigenes Verhalten zu finden. Dass der Dumme oft bockig ist, darf nicht darüber hinwegtäuschen, dass er nicht selbständig ist. **Man spürt es geradezu im Gespräch mit ihm, dass man es gar nicht mit ihm selbst, mit ihm persönlich, sondern mit über ihn mächtig gewordenen Schlagworten, Parolen etc. zu tun hat. Er ist in einem Bann, er ist verblendet, er ist in seinem eigenen Wesen missbraucht, misshandelt.** So zum willenlosen Instrument geworden, wird der Dumme auch zu allem Bösen fähig sein und zugleich unfähig, dies als Böses zu erkennen. Hier liegt die Gefahr eines diabolischen Missbrauchs.

The English translation used here is:

Every powerful display of external force, whether political or religious, strikes a large portion of people with stupidity. Indeed, it appears to be almost a sociological-psychological law: the power of the few needs the stupidity of the many. The process does not consist of certain intellectual faculties suddenly withering. Rather, under the overwhelming impression of power, people are robbed of their inner independence and - more or less unconsciously - give up forming their own judgments about the situations that arise. The fact that the stupid person is often obstinate should not hide the reality that he is not acting autonomously. **In conversation one senses that one is not dealing with the person himself but with slogans and catch-phrases that have gained mastery over him. He is under a spell, blinded, his very being abused and misused.** Having become a will-less instrument, the stupid person is capable of any evil and at the same time incapable of recognizing it as evil. Here lies the danger of a diabolical misuse.

This is not a claim about low intelligence. Bonhoeffer describes a socially induced loss of inner independence in which external power, slogans, and formulas speak through a person whose ordinary intellectual abilities remain available. His *Dummheit* is therefore broader and more political than contaminated mindware.

Bonhoeffer names the phenomenon; culture mechanics proposes a mechanism. At the individual level, an intelligent person's main CPU can remain capable while the bigOther supplies the classifications, slogans, sentiments, and permissions under which that intelligence operates. [Epistemic Agency under Mechanical Solidarity](#) develops the social-field account: mutually synchronized local bigOthers and institutional power can make borrowed judgment feel internally compulsory and thereby weaken the person's capacity to form an independent response.

The historical baseline and the theoretical application must remain distinct. The [United States Holocaust Memorial Museum's biographical account](#) documents Bonhoeffer's theological and ecumenical activity, opposition to Nazi church policy, connections to resistance, and 1943 arrest. Its broader account of [non-Jewish resistance](#) also distinguishes individual theologians such as Bonhoeffer from church hierarchies that supported or acquiesced in the regime. Those facts do not directly measure anyone's local bigOther or establish the mechanism proposed below.

The **culture-mechanical application hypothesis** is that Bonhoeffer's one local bigOther executed a densely braided Christian mythological lens to which he was deeply loyal. That Christian weave could incorporate compatible packages such as a *Berufsethos*, familial responsibility, intellectual discipline, pastoral duty, and responsibility toward the concrete neighbour. They did not stand beside Christianity as independent evaluators or compete with it for supremacy; their operative meaning was produced within the one Christianly programmed weave.

National Socialism did not offer one more compatible package. On the originating verdict stated in "The single-slot principle," its governing classifications were deeply incompatible with an intact Christian weave. Nazi capture would therefore have required replacement rather than ranking:

INCUMBENT CHRISTIAN BRAID

God, truth, neighbour, church, obedience, responsibility, practice

↓

LOOSEN AND UNBRAID LOAD-BEARING BINDINGS

detach authorities, meanings, loyalties, sentiments, and defences

↓

LIMINAL INSTABILITY OR DEPENDENCY

the old weave no longer governs coherently; a successor is not yet secure

↓

REBRAID RETAINED AND NEW STRANDS
bind Christian remnants, Volk, race, Führer, nation, ritual, and sanction

↓

ONE NAZI-GOVERNED SUCCESSOR WEAVE

Where such capture succeeded in a pastor or priest, continued use of scripture, Christian vocabulary, ritual, office, or self-description would not by itself show that an intact Christian program survived below a higher-ranked Nazi program. The material could have been detached from its previous relations and rewoven into one Nazi-Christian successor lens. Whether and how this occurred in any particular person remains a historical and biographical question, not something the theory may infer from conformity alone.

The corresponding hypothesis about Bonhoeffer is that this unbraiding did not succeed. His deep loyalty, theological work, Christian practice, relationships, alternative authorities, and encounters with persecuted people may have maintained or repaired the incumbent braid. A supporting counterfield did not provide a second PCI card; it helped the installed Christian programming resist loosening and replacement. National Socialist signals could consequently be classified through that existing weave as idolatry, falsehood, or injury to the concrete neighbour rather than being processed as commands from a higher-ranked political identity. This is a proposed explanation of the historical contrast, not a direct measurement of Bonhoeffer's inner architecture or proof about clergy as a class.

Culture mechanics interprets Dummheit as a condition in which:

1. the bigOther has acquired meta-authority;
2. contaminated mindware—that is, defective mythologies and lens mappings—supplies protected beliefs, misdirected sentiments, and anti-evaluation rules;
3. social power supplies rewards, sanctions, repetition, and apparent consensus; and
4. the main CPU is recruited to execute and defend the resulting classifications.

Normopathie and political ponerology: two faces of captured culture Culture mechanics treats **Normopathie** and **political ponerology** as complementary perspectives on a captured cultural system. They are not identical concepts. They describe the same pathological configuration from different social positions:

- **Normopathie** describes the population-side result. People over-adapt to a pathological social normality and cease to recognize it as pathological. Their local bigOthers defer to authorities, prestige sources, reference groups, and apparent consensus; borrowed classifications may then crystallize into moral emotions and eventually feel like an autonomous conscience.
- **Political ponerology** describes the formation and exploitation of destructive political power. Its concepts of **spellbinders**, ponerogenic processes, and **pathocracy** provide the more precise elite-side vocabulary: manipulative, characterologically destructive, or cynically instrumental actors create, capture, intensify, administer, and profit from a pathological cultural order.

The two faces belong to one culture-mechanical “coin”: a **captured distributed bigOther**. On one face are the people living under its spell; on the other are the spellbinders and seducers who shape, exploit, and gain power from it.

SPELLBINDERS AND PATHOCRATIC ACTORS
select and manipulate mythologies, symbols, systems, and sanctions

↓

CAPTURED MYTHOLOGICAL LENS / DISTRIBUTED BIGOTHER
defines normality, virtue, loyalty, danger, and deviance

↓

NORMOPATHIC ADAPTATION
borrowed judgment, conformity, Dummheit, denunciation, self-policing

↓

APPARENT CONSENSUS AND DISTRIBUTED ENFORCEMENT
reward the spellbinders and strengthen their control

○

Systems Leadership identifies important channels through which this capture can occur. Systems, symbols, leadership behaviour, and mythologies can be selected or modified so that the resulting mythological lens maps obedience to virtue, dissent to betrayal, dependence to safety, and elite interest to the common good. Political seduction then substitutes identification and affective trust for examination: the seducer offers protection, belonging, moral certainty, or relief from responsibility while seeking access, loyalty, power, and impunity.

The normopathically adapted population is therefore not merely passive. Once local bigOthers have been synchronized, ordinary participants become the distributed execution and enforcement layer of the captured bigOther. They repeat its mythologies, display its classifications, reward conformity, punish dissent, and manufacture the apparent consensus to which other uncertain people defer. A powerful main CPU may assist this process by producing sophisticated rationalizations for directions that the bigOther has already made emotionally compulsory.

The relation is recursive rather than simply top-down. Spellbinders gain a selection advantage in a culture whose lens rewards their methods, while their control over institutions enables them to strengthen that lens. A normopathic culture can arise without a single deliberate architect through decentralized conformity, dependency, and institutional inertia; it can then be captured by ponerological actors. Conversely, a would-be spellbinder cannot sustain a pathocracy without compatible institutions and a sufficiently synchronized population.

In this synthesis, Bonhoeffer’s **Dummheit** names a characteristic loss of inner independence on the population side; **Normopathie** names the normalization and social reproduction of that condition; and political ponerology—especially **pathocracy**—names the elite formation and power process that can cultivate and exploit it.

These terms are interpretive cross-references, not interchangeable clinical diagnoses or licenses to pathologize political opponents. Normopathie and political ponerology are not standard mainstream empirical categories, and the culture-mechanical connection proposed here should not be attributed directly to Hans-Joachim Maaz or Andrzej M. Łobaczewski. Its claim is narrower: the concepts illuminate complementary positions within one possible cultural feedback loop.

Jaynes, Bach, and agentified collective enactment [Julian Jaynes’s *The Origin of Consciousness in the Breakdown of the Bicameral Mind*](#) and Joscha Bach’s “[Synthetic Sentience](#)” provide neighbouring models for two different levels of agentified enactment. Jaynes hypothesized an older mentality in which action-guiding products were experienced as the auditory commands of gods rather than as self-authored deliberation. Bach describes selves and gods as implemented agents and develops the possibility of a multi-mind-self enacted across several human minds. Culture Mechanics does not adopt either complete theory. It uses their conjunction to ask how a culturally represented agent can become locally present and distributedly operative.

Neighbouring proposal	Culture-mechanical interpretation	Boundary
Jaynesian bicameral mentality	A possible highly agentified, command-like operating regime of homo duplex	It is not a synonym for homo duplex and is not required by the architecture.
Divine auditory commands	Cultural programming experienced as bigOther-presence or bigOther-as-Thou and attributed to a god-agent	The local bigOther normally classifies affectively and need not generate auditory voices.
Commands not experienced as self-authored	Weak personal authorship, deep capture, or possible subjecthood absorption	Obedience and presence alone do not establish total fusion.
Several gods addressing one person	Several compatible divine agent-models held within one pantheonic mythological weave and activated by situation, ritual, role, or place	This need not install several local bigOthers or violate single-slot exclusivity.
Bach’s god or top-level agent implemented across minds	A distributed bigOther that may cross the threshold into collective perception, memory, judgment, intention, ownership, and action	Shared representation and synchronized devotion alone remain below the multi-mind-self threshold.
Human alignment and collective agency	Coupling, compatible programming, functional integration, and collective-agent formation	Alignment is not one scalar and does not establish truth, goodness, jurisdiction, corrigibility, or fusion.

The safe comparative formulation is:

Jaynesian bicameral mentality can be interpreted as a culturally produced, highly agentified, command-like operating mode of homo duplex in which the culturally programmed second side becomes phenomenologically present as one or more gods and receives action-guiding authority otherwise attributed to an autobiographical self.

The less historically committed name **bicameral-like enactment** refers to that possible regime without accepting Jaynes's dating, universal scope, philology, or neurological explanation. Jaynes emphasizes intrapersonal phenomenology; Bach emphasizes distributed implementation; Culture Mechanics proposes a functional bridge:

- shared mythology of a god
- god-agent represented in local mythological lenses
- agentified Beseelung and presence as Thou
- coordinated enactment through several persons and institutions
- distributed bigOther
- possible god-as-multi-mind-self
- social confirmation of the god's local presence

The god-agent can acquire functional perception through adherents, memory through scripture and tradition, judgment through compatible local bigOthers, speech through persons and institutions, intention through ritual or decision procedures, ownership through sacred or common objects, and action through coordinated bodies. This implementation can remain differentiated. It becomes fused when the collectively enacted subject displaces participating persons as independently legitimate authors.

A pantheon is compatible with the single-slot principle when its gods are agent-personae with differentiated jurisdictions inside one operative weave. A ritual or situation can activate one persona without changing the processor. Incompatible top-level packages contesting the same load-bearing classifications still require rejection or replacement under single-slot exclusivity.

These comparisons have strict evidential limits. A [multidisciplinary critical reappraisal](#) identifies neurological and philological problems in Jaynes's proposal while treating the non-unitary self as an important legacy. Ancient texts rarely decide whether a reported god-voice was an auditory experience, ritual language, literary convention, political legitimation, or some combination. Resemblance to Jaynes or Bach therefore does not validate the local-bigOther architecture, prove a history of consciousness, reduce theological beings to human artifacts, or make every religion, ritual, shared intention, or synchronized group a multi-mind-self.

Summary cross-reference table

Related concept	Primary question	Relation to culture mechanics
Autonomous mind	What fast default response is generated?	Part of the ordinary brain and elephant, not the bigOther; the collar can alter its affective inputs and direction.
Algorithmic mind	Is there sufficient computational capacity?	Corresponds most closely to the processing power of the main CPU.
Reflective mind	Will reflective processing be initiated, and under which goals and dispositions?	Corresponds to the CPU's governing and self-corrective activity, represented partly by the rider.
Cognitive miserliness	Was reflective processing avoided?	The CPU accepts an easy response without inspecting the elephant or collar.
Override failure	Was a detected default unsuccessfully suppressed?	The CPU engages but fails to overcome a strongly weighted elephant or bigOther response.
Mindware gap	Is a rational tool missing?	The main CPU lacks the learned rule needed to construct a corrective response.
Contaminated mindware	Has acquired mindware corrupted rational judgment?	For culture mechanics, this is a bigOther executing a defective mythological lens that uses strong sentiments and evaluation-disabling rules to steer the CPU away from epistemic or instrumental rationality.

Related concept	Primary question	Relation to culture mechanics
Dysrationalia	Why can adequate intelligence coexist with irrationality?	The bigOther is one possible source of direction or inhibition independent of CPU power.
Motivated reasoning	How do desired conclusions bias reasoning?	The main CPU reasons directionally under affective priorities that the bigOther may supply.
Identity-protective cognition	How does group identity bias judgment?	The wireless collar attaches belonging, status, and exclusion to conclusions.
Sacred values and taboo trade-offs	Which comparisons are morally prohibited?	The bigOther determines what may not be questioned, priced, or compromised.
Actively open-minded thinking	Can the person seek disconfirmation and revise?	Healthy mindware helps the main CPU inspect the bigOther's output.
Master signifier	Which symbol organizes a field of meaning?	A highly compressed protocol token can activate a cluster of mythologies and mappings already present in the mythological lens.
Bonhoefferian Dummheit	How does social power displace inner independence?	Describes large-scale capture of judgment by a power-saturated bigOther.
Normopathie	How does a population adapt to and reproduce a pathological normality?	Describes the population-side condition in which a captured bigOther supplies borrowed judgment, conformity, and distributed enforcement.
Political ponerology / pathocracy	How do destructive actors form, capture, and exploit political power?	Describes the elite-side actors and selection processes that can program, administer, and profit from a captured distributed bigOther.
Jaynesian bicameral mentality	How might culturally generated guidance be experienced as the commands of gods rather than self-authored thought?	Supplies a controversial intrapersonal limit model for agentified, command-like homo duplex; it does not define the ordinary local bigOther.
Bachian god-as-multi-mind-self	How might one represented agent be implemented across several minds and bodies?	Supplies a distributed-agent neighbour; Culture Mechanics adds its local processor, field formation, functional threshold, fusion axis, and metaphysical boundary.

20. Scope and terminological cautions

Culture mechanics is a proposed synthetic term, not the established name of a single accepted scientific theory. It combines ideas associated with social psychology, Durkheimian sociology, Lacanian psychoanalysis, Systems Leadership, narrative theory, cybernetics, distributed cognition, cultural evolution, and systems theory.

Its computer and wireless-collar descriptions are functional models, not claims that the brain literally contains a PCI card or a separately identifiable anatomical collar processor. Its charged-particle, field, laser, wireless, and computing comparisons describe proposed relations and generate hypotheses; they do not assert that social processes are physically electromagnetic or obey the equations of the source domains.

Its use of **homo duplex** extends Durkheim. Its use of **bigOther** operationalizes and modifies Lacan. Its protocol interpretation isolates one functional aspect of Lacan's symbolic order rather than exhausting the concept. **bigOther-presence** and **bigOther-as-Thou** borrow phenomenological cues from James and Buber without attributing the proposed processor or field mechanism to either thinker. These inherited terms name important sources of the model but should not be mistaken for exact summaries of their doctrines.

Relevant structure and the underlying connection between experienced moral good or evil and represented structural support or damage are adapted from Dushan Wegner's *Relevante Strukturen*. The typed relational definition, the separation of felt relevance, represented effect, actual effect, generative centrality, and normative standing, the multidimensional account of strengthening, and the placement of the appraisal inside the homo-duplex and single-slot architecture are Culture Mechanics extensions. They should not be attributed to Wegner as his own distinctions. The named change-indexed moral-mobilization hypothesis is likewise a project-developed operationalization of Wegner's emphasis on change, not his own formal construct.

Jaynes's bicameral mind and Bach's implemented multi-mind-self are neighbouring theories, not analogies or empirical confirmation. The term *multi-mind-self* in this project is taken from Bach and given the explicit functional threshold stated above. The bicameral-like comparison is narrower than Jaynes's historical theory and must not be used to claim that ancient people universally lacked consciousness or an individual mind.

The theory's three constitutive commitments each carry an explanatory burden. The local bigOther is functionally distinct from the main CPU; the distributed field is emergent from relations among persons, communications, institutions, practices, and artifacts; and the single-slot principle permits a modular weave of compatible packages while denying parallel operative evaluators. Under the third commitment, first-order and lifted programming both fully occupy the slot; order level distinguishes shared concrete answers from a shared generator of answers; a lifted generator may govern universally while constituting limited subordinate jurisdictions; and corrigibility must be evaluated independently. These claims should produce comparative explanations and possible tests. None licenses an immaterial substance, erases the responsibility and causal contribution of biological persons, or proves that every apparent conflict of allegiance is a completed worldview replacement.

The single-slot commitment is therefore defeasible in principle. A stable case of two incompatible evaluators remaining independently final over the same conduct, each generating its own affect, veto, and correction without hierarchy, reinterpretation, contextual division, or a third governing rule, would count against it. This defeat condition should not be neutralized after the fact by calling every such observation a complex braid.

The framework also does not claim that cultural programming determines behaviour mechanically. Humans interpret, combine, resist, conceal, question, and change symbolic instructions. The model proposes structured influence, not perfect control.

Culture-mechanical object, ideological symbol, conformity signal, targeting signal, the four propagation and enforcement forms, **jealous cultural program, enforcement-exclusion duality, protection-framed jurisdictional manoeuvre**, and the combined signal-moralization-jurisdiction mechanism are project-developed constructs. The four forms are ideal types rather than a validated scale. Andrick supplies the theory of moralization attributed to him; the processor, protocol, field, jealousy, and ideology-as-hallucination extensions belong to Culture Mechanics. Whole religion classifications and the Iran end-state claim are explicit hypotheses, not facts established by the definitions themselves. [Gregory H. Stanton](#) supplies the neighbouring genocidal-process model attributed to him, not the targeting-signal definition or the culture-mechanical causal ontology.

An observed symbol does not by itself disclose the carrier's private intention, degree of belief, or complete program. The same token can be voluntary, coerced, devotional, propagating, targeting, jurisdictional, resistant, or multiply functional in different settings. Target status can be made legible through performance, absence, imposition, or attribution. The relevant evidence includes who is expected to perform the token, who assigns it, who may refuse, how absence is interpreted, what sanctions follow, which jurisdiction is claimed, and what the program does after acquiring power.

Finally, describing culture as programming does not imply that all symbolic reality is false. Money, law, office, obligation, legitimacy, and dignity are symbolically constituted but socially consequential realities. Culture mechanics distinguishes such constitutive social meanings from factual claims about physical reality, which remain answerable to evidence.

Semantic summary

- **Broader class:** theory of cultural causation and social coordination.
- **Central object:** the culturally programmed bigOther in the homo-duplex individual.
- **Primary operation:** sentiment classification.
- **Narrative unit:** one mythology—one socially evaluated narrative or story; *narrative* is the broader ordinary-language term and often its fuzzy synonym.
- **Narrative corpus:** mythologies—the accumulated stories that train cultural evaluation.

- **Installed evaluative program:** the mythological lens shaped by those mythologies and reinforced by systems, symbols, practices, and institutions.
- **Relevant structure:** a represented relational arrangement or organized condition that the installed lens treats as carrying moral weight.
- **Relevant-structure appraisal hypothesis:** people often experience represented support for a felt-relevant structure as good and represented damage as evil; felt relevance, represented effect, actual effect, generative centrality, and normative standing remain distinct.
- **Generative-centrality distinction:** a structure can causally produce capabilities required by many downstream structures without receiving corresponding felt relevance; a cultural sublimation architecture is one proposed case.
- **Change-indexed moral-mobilization hypothesis:** moral appraisal often becomes more salient and action-directing when a condition is represented as causing, continuing, preventing, or failing to prevent change in a felt-relevant structure; this is a testable mobilization pathway, not a complete ontology of ethics.
- **Analytical umbrella:** a culture-mechanical object is a program, carrier, implementation arrangement, processor state, collective formation, or collective agent involved in cultural installation, activation, transmission, execution, synchronization, or enforcement; its subtype must be identified.
- **Religion-inclusive program category:** religions, secular ideologies, company cultures, activist movements, professional cultures, and state programmes are analyzed as members of the same broad family rather than different ontological kinds.
- **Ideological symbol:** a medium-independent socially legible token that activates an installed program and communicates a person's relation to it.
- **Conformity signal:** an ideological symbol whose performance, absence, refusal, or substitution makes conformity and deviation publicly legible.
- **Targeting signal:** a performed, omitted, imposed, or attributed socially legible token that assigns a person or population to a sanctionable out-group; an absent conformity signal can therefore become a target marker.
- **Propagation and enforcement forms:** private, collective, ideological form, and fundamentalist; these are ideal-type program configurations, not kinds of bigOther or one necessary developmental staircase.
- **Conflict ladder:** propositional, causal-story, and classification conflicts remain distinct from mythological rivalry; active interference creates mythological conflict, incompatible governing lenses create cultural-program conflict, organized recruitment and suppression create ideological-form conflict, and physical coercion or violence marks fundamentalist-form conflict.
- **Signal-suppression distinction:** rival-signal or counter-program suppression describes interference with opposition without analytically reducing rival or corrective signals to random noise.
- **Independent animation axis:** *Beseelung* describes how affectively alive and conduct-directing a program is, independently of its propagation or violence.
- **Jealous cultural program:** a program that claims exclusive allegiance and treats incompatible commitment, dissent, or exit as betrayal; single-slot exclusivity alone is not jealousy.
- **Moralized enforcement bridge:** a signal or refusal becomes character disclosure, character accusation attacks civic or social standing, solidarity distributes the judgment, and systems attach exclusion or coercion.
- **Enforcement-exclusion duality:** enforcement conditions continued inclusion, standing, access, or permitted action on conformity; exclusion is the withdrawal or denial applied to refusal, and one visible sanction can perform both operations.
- **Fundamentalist threshold:** authorization or willingness to use physical or eliminative force, not the mere presence of moral evaluation or discursive violence.
- **Genocidal escalation neighbour:** Stanton's ten overlapping processes map one possible path from classification and symbolization through discrimination, dehumanization, organization, polarization, preparation, persecution, and extermination to denial; they are not a universal ladder or a synonym for the broader culture-mechanical repertoire.
- **Local processor:** the bigOther that executes the lens.
- **Single-slot constraint:** one local bigOther executes one operative lens; no higher runtime evaluator ranks parallel bigOthers or governing worldviews.
- **Complete slot occupancy / full capture:** a stable first-order or lifted program completely occupies the one slot; *full* does not by itself mean pathological.
- **Order levels:** first-order mechanical solidarity shares concrete rules and answers; lifted mechanical solidarity shares rules that generate, select, apply, and revise concrete answers.
- **Generative relation:** fixed, installed meta-rules combine with current knowledge or inputs and a situation to generate a binding first-order output; generator and output remain parts of one weave.
- **Jurisdictional distinction:** a lifted meta-order may govern universally at its own level while persons, offices, institutions, communities, and contracting parties remain plural and domain-limited beneath it; that pluralism

is a consequence or application, not the definition of lifting.

- **Corrigibility axis:** first-order and lifted captures can each be open or closed; epistemic sovereignty, correction failure, interpretive monopoly, and jurisdictional spillover—not rivalry alone—mark pathology.
- **Package compositionality:** compatible religious, professional, familial, national, and local packages can be braided into that one complex lens.
- **Replacement under incompatibility:** an incompatible governing program must be rejected, or the incumbent weave must be unbraided sufficiently for one successor to be rebraided and installed.
- **Three-layer causal distinction:** the historical cause of a rule, its current affective classification, and its presently avowed reason can coincide or diverge and should be measured separately.
- **Formation–construction distinction:** endogenous mythology formation is the distributed growth and selection of cultural articulations from changing conditions and a substantive research path in its own right; purposive mythology construction is the prospective study of attempted target-state-guided intervention in that same ecology.
- **Intervention-hypothesis boundary:** mythology may be a privileged symbolic intervention surface, but it is not the whole culture-implementation stack; attempted purposive construction neither places the constructor outside culture nor guarantees the installed successor.
- **Single-slot defeat condition:** stable same-domain operation by two incompatible evaluators that remain independently final, affectively alive, and mutually ungoverned would count against strict single-slot exclusivity.
- **Phenomenological appearance:** bigOther-presence or bigOther-as-Thou—the collective or symbolic authority encountered as an objectively present Other.
- **Agentified enactment depth:** representation, consultation or service, presence as Thou, distributed enactment, and fused enactment must not be collapsed; only the final relation entails authorial displacement.
- **Immediate target:** the elephant—the intuitive, motivational, largely nonconscious mind.
- **Conscious interface:** the rider and the main CPU.
- **Shared communication interface:** Lacan’s big Other, functionally translated as the on-the-wire symbolic protocol.
- **Network operation:** reciprocal signalling through the protocol and possible synchronization.
- **Field coherence:** mechanical solidarity.
- **Emergent network state:** the distributed bigOther.
- **Possible collective agent:** the multi-mind-self when integration and continuity pass the relevant threshold.
- **Nested authorship:** a network-level multi-mind-self can add an operative *we* while differentiated participating *Is* retain legitimate personal and subordinate jurisdictions; it does not install a second local bigOther.
- **Episodic multi-mind-self:** a distributed bigOther that crosses the collective-agent threshold only during bounded high-integration periods; viable latency, de-animation, and cultural loss remain different inter-episode states.
- **Differentiated unity:** a real shared *we* that preserves distinct persons, functions, judgments, relationships, and legitimate subordinate jurisdictions; **person-preserving unity** emphasizes this boundary.
- **Subjecthood absorption (fusion):** the independent extent to which a collective program denies personal judgment, conscience, purpose, property, loyalty, identity, relationships, refusal, or exit legitimate standing against the collective.
- **Fusion pressure:** dynamics that generalize compulsory alignment, subordinate differentiated jurisdictions, and weaken correction, refusal, exit, and appeal.
- **Total fusion:** the limiting combination of high subjecthood absorption, comprehensive jurisdiction, and closed correction or exit.
- **Fusion ideology:** a program that construes separate persons as alienated or falsely conscious fragments to be reconstituted as organs of one collective subject.
- **Long-term result:** reproduction or transformation of culture through ritual and institutionalization.
- **Central normative problem:** whether the bigOther remains contestable by reflective judgment or acquires final authority over it.
- **Developmental axis:** externally enforced → socially authored → self-authored → self-transforming bigOther.

Example of use

From the perspective of **culture mechanics**, the ceremony did not merely communicate the organization’s values. It reenacted and reinforced particular mythologies, strengthened corresponding mappings in each participant’s mythological lens, and made the bigOthers’ resulting sentiments collectively observable.

Compact formulas

Single-slot composition and replacement:

one PCI slot → one local bigOther → one operative mythological lens; compatible packages → one braided program; incompatible governing worldview → rejection or incumbent unbraiding → liminal interval → one rebraided successor

Historical explanation and present execution:

historical cause ≠ live affective classification ≠ avowed reason; present agreement among them is an empirical question

Formation, intervention, and selection:

endogenous formation: changing conditions → mismatch → articulation → distributed selection → embodiment; prospective purposive construction: candidate chosen destination D* → diagnosis → symbolic and institutional intervention → testing and correction; where intervention is attempted, the actual successor is jointly constrained by intention, receivers, incumbent and rival fields, institutions, consequences, and reality

Relevant-structure appraisal:

felt relevance × represented support or damage → possible moral appraisal and mobilization; actual multidimensional effect + generative centrality + normative standing → separate evaluation

Sublimation-bearing symbols and lens programming:

carrier or activation device → installed sublimation-related mappings → local-bigOther classification; repeated rival mythology + systems + rewards + sanctions + conduct → possible lens reprogramming → changed Beseelung, enactment, and transmission

Change-indexed moral mobilization:

represented change, continuation, prevention, or culpable omission affecting felt-relevant structure → intensified moral classification and action readiness (hypothesis, not definition)

Single-slot hard test:

two incompatible same-domain evaluators + independent finality + independent affect, veto, and correction + stable coexistence without hierarchy, reinterpretation, contextual division, or third rule → evidence against strict single-slot exclusivity

Order, jurisdiction, and lifting:

one fully occupied slot × {shared concrete rules and answers | shared answer-generating meta-rules} × {corrigible | pathological}; fixed M + current K_t + situation C → binding R_t(C); lifting may enable plural first-order outputs and bounded jurisdictions without creating a second bigOther

Person–collective constitution:

collective agency × subjecthood absorption × jurisdiction × corrigibility; differentiated unity preserves personal and subordinate standing, while generalized compulsory alignment + jurisdictional absorption + blocked correction, refusal, and exit → fusion pressure → possible total fusion

Agentified enactment and the Jaynes–Bach bridge:

mythology → god-agent represented in one operative lens → agentified *Beseelung* / bigOther-as-Thou → distributed enactment → possible multi-mind-self; displacement of personal authorship → fusion

Conformity and targeting signals, moralization, and enforcement–exclusion:

ideological program → performed, omitted, imposed, or attributed token → conformity, refusal, or target status becomes observable → character disclosure and accusation → distributed judgment → enforcement through inclusion, exclusion, coercion, or violence → defence or expansion of jurisdiction

Rivalry and conflict:

propositional, causal-story, or classification conflict → possible mythological rivalry → active interference with transmission, authority, membership, or institutional embodiment → mythological conflict →

organized recruitment and rival-signal suppression → ideological-form conflict → physical coercion or violence → fundamentalist-form conflict

Full culture-mechanical cycle:

mythologies shape the mythological lens → the local bigOther maps observations onto social feelings → the elephant moves → the rider explains or questions → behaviour is encoded in the shared symbolic protocol → other local bigOthers classify and respond → an emergent field acts back upon its participants → distributed synchronization reproduces or transforms culture

Epistemic agency under mechanical solidarity

epistemic agency under mechanical solidarity *noun phrase*

Status: proposed synthetic term and field of analysis

Fields: social epistemology, moral psychology, social psychology, developmental psychology, sociology of knowledge, sociology of morality, political psychology, cultural theory

Short definition

Epistemic agency under mechanical solidarity is the capacity of a socially formed and epistemically dependent person to judge, test, and revise beliefs while living inside an emergent symbolic-affective field that already supplies shared meanings, trusted authorities, legitimate institutions, and social rules about what may count as knowledge.

The term describes a tension rather than an escape from society. Human beings cannot verify everything personally. They must rely on testimony, experts, professions, records, and institutions. At the same time, networked local bigOthers can synchronize around particular **master signifiers**, narratives, authorities, and institutional **gatekeepers**. The resulting field is implemented through persons and communication but is not merely a sum of independently formed psychologies: its organized public signals, institutions, expectations, and sanctions act back upon each participant. Authorization can thereby begin to replace evaluation.

The field is not automatically a collective agent. Under sufficiently integrated conditions it can become a **multi-mind-self** capable of continuing or episode-bounded judgment, action, and unitary ownership through many *beseelte* persons. A recurrent but non-universal topology places a comparatively uniform audience before an elevated teacher, leader, or institutional voice; common attention, narrative, authority, and mutual awareness can then produce an unusually receptive programming state. The same geometry can transmit truthful education or propaganda.

The healthy form is **corrigible epistemic dependence**: authorities are trusted provisionally, within a domain, because they provide access to evidence and methods that remain open to correction. The pathological form is **authority-gated belief updating**: a claim is admitted or rejected primarily according to whether it carries the signature of a socially authorized person, office, institution, identity, or narrative. This produces **asymmetric epistemic permeability**—high openness to authorized claims and low openness to direct evidence or elementary checks arriving through an unauthorized route. A person can therefore be easy to persuade from inside the authorized structure and extraordinarily difficult to correct from outside it.

The corresponding developmental achievement is **epistemic adulthood**. It does not mean distrusting all institutions or becoming intellectually self-sufficient. It means gaining enough reflective distance from one's socialization and its mechanical-solidarity field to inspect the inherited architecture of trust itself: why an authority is trusted, where its jurisdiction ends, what could defeat its claims, whether its sources are genuinely independent, and whether legitimacy has been confused with truth. In the specialized sense used here, the freedom thereby achieved is **cognitive liberty**.

Under the single-slot principle this freedom remains a **full capture**: one operative weave still completely occupies the local bigOther. Emancipation can lift that weave from shared concrete answers to shared rules for generating, selecting, applying, and revising answers. Particular beliefs, offices, and institutions can then vary within one binding generator. Order level, complete occupancy, jurisdiction, and corrigibility remain separate properties.

The positive norm is **piety toward the real**: models, narratives, authorities, and even one's own conviction must remain answerable to a reality capable of surprising and correcting them. The practical problem is how to help people recover this reality-responsive judgment without merely recruiting them into a closed successor solidarity with different but equally preemptive gatekeepers. **MCIP**—Mirror, Cut, Invite, Promise—is one proposed micro-method: preserve the person, expose a precise discrepancy, return authorship, and make independent inquiry socially and practically survivable.

In one sentence:

Epistemic agency under mechanical solidarity is the socially situated ability to use inherited communities and institutions as corrigible instruments of knowledge without allowing their authority to become the final permissioning layer for reality.

Long definition

1. General meaning

The term names the relation between two facts:

1. **Knowledge is socially dependent.** No person can personally reproduce all observations, calculations, experiments, historical investigations, or technical judgments on which modern life depends.
2. **The social structures that transmit knowledge also form judgment.** They teach people whom to trust, which questions are respectable, which institutions have jurisdiction, which symbols carry legitimacy, and which doubts feel shameful, dangerous, or disloyal.

Epistemic agency under mechanical solidarity asks what remains of personal judgment after this necessary social formation has taken place. Its central question is not whether a person is influenced by culture. Everyone is. It is whether the person's culturally inherited trust architecture can itself become an object of reflection and correction.

The object of analysis is therefore neither an isolated cognitive trait nor an accusation of gullibility. It is a **person–culture–authority relationship**. It includes:

- the person's dependence on testimony and expertise;
- the collective formation of meanings and sentiments;
- the distribution of epistemic authority across persons, roles, institutions, and channels;
- the narratives and symbols by which authority is legitimized;
- the dispositions that regulate trust, doubt, and closure;
- the social costs of disagreement, checking, and exit;
- the routes through which reality can correct the resulting mental model.

The term belongs inside the broader proposed framework of *Culture Mechanics*, which begins with the homo-duplex individual: the main CPU, the local bigOther, its mythological lens, and the shared symbolic protocol through which local states become socially legible. This entry begins at the next causal level. It asks how networked local bigOthers generate mechanical-solidarity coherence and a distributed bigOther, how that field acts back upon its participants, and under what conditions it becomes a multi-mind-self. *Culture mechanics* in this sense is a term of this synthesis, not the name of an established academic theory. Epistemic agency under mechanical solidarity concentrates on one particular output of that machinery: **who or what is permitted to determine what a person treats as real**.

Exact culture-implementation practice belongs to Macdonald, Burke, and Stewart's *Systems Leadership: Creating Positive Organisations*. This entry addresses the narrower epistemic and collective-field consequences of such cultural formation rather than restating that practical method.

2. Semantic anatomy of the term

Each word performs necessary work.

Epistemic **Epistemic** concerns belief, knowledge, evidence, justification, inquiry, uncertainty, and correction. It distinguishes this topic from agency in the general sense of being able to choose or act.

The relevant object is not merely the truth value of individual sentences. People act through larger mental models: classifications, causal structures, expectations, narratives, and predictions. A communication can contain many true statements while inducing a distorted model through selective framing. Epistemic evaluation must therefore ask whether the installed model adequately tracks the relevant structure of reality.

Agency **Agency** is the effective capacity to participate in the authorship of one's own beliefs and trust relations. It includes the ability to:

- distinguish evidence from social authorization;
- recognize uncertainty rather than filling every gap immediately;
- ask what would count against a favored claim;

- perform available low-cost checks;
- compare explanations and causal stories;
- inspect the jurisdiction, incentives, record, and correction mechanisms of authorities;
- tolerate the emotional and social discomfort of disagreement;
- revise both a belief and the standards by which the belief was previously judged.

Agency is more than the legal permission to think freely. A person may be formally free while remaining unable to question the classifications through which freedom itself becomes intelligible. Agency also requires practical access to alternatives, emotional tolerance for dissonance, and some ability to survive the social consequences of independent judgment.

Under **Under** indicates situatedness, not necessarily oppression. A person exercises judgment *under* inherited language, institutions, roles, authorities, dependencies, and collective sentiments. These structures can support or impair agency. The preposition avoids two false pictures: the isolated knower who owes nothing to society, and the completely determined subject who possesses no capacity for reflection.

Mechanical solidarity **Mechanical solidarity**, introduced by the French sociologist **Émile Durkheim** in *De la division du travail social* (1893), is social cohesion produced through shared beliefs and sentiments and the felt moral authority of the collective consciousness. Durkheim contrasts it analytically with **organic solidarity**, which arises from differentiation, specialization, and interdependence in a division of labour.

Culture mechanics interprets mechanical solidarity as an **emergent symbolic-affective field**: compatible local bigOthers repeatedly communicate, observe, answer, reward, and sanction one another until common classifications acquire organized force beyond any isolated encounter. The field exists through persons, language, practices, institutions, and artifacts, but its relational organization acts back upon the persons who implement it. This field vocabulary and mechanism are proposed here; Durkheim did not describe electromagnetic fields, local bigOther processors, or a wireless network.

The present theory distinguishes two architectures of that shared moral force:

First-order mechanical solidarity shares concrete rules and answers. Lifted mechanical solidarity shares the rules that generate, select, apply, and revise concrete answers.

The adjective *lifted* is new here: it extends Durkheim rather than reproducing a term used by him. Its minimal formal relation is:

fixed meta-rules M + current knowledge or inputs K_t + situation C → binding first-order output R_t(C)

Fixed here means operatively installed and binding, not eternal. A lifted ruleset can itself be revised through the procedures it recognizes. The generator, its present inputs, and its concrete outputs all belong to one operative weave; they are not separate bigOthers. First-order and lifted solidarity also use the same proposed field-forming mechanism and both can fully occupy the single slot.

A dense corpus of detailed prescriptions that *beseelte* participants follow as self-compulsorily proper is a strong and testable indicator of predominantly first-order solidarity. It is not the definition: first-order orders can contain interpretive procedures, and lifted generators can produce extensive, precise rules. Lifted systems often display **generative compression**—comparatively few meta-rules generate many changing answers—but fewness alone is not decisive. The diagnostic question is where common binding force resides: in the concrete answers, or in the rules by which answers are produced and corrected.

Modern societies may combine organic differentiation with lifted mechanical solidarity. A shared generator can admit different religions, occupations, identities, institutions, and ways of life as different first-order outputs or bounded packages. It can also constitute and limit offices and jurisdictions. Pluralism, division of labour, and bounded subordinate authority are therefore important possible consequences of lifting, not its definition. Nor must lifted authority be weak or local: a generator can have universal jurisdiction at its own level while the outputs and authorities it generates are particular and bounded. The cases and difficult classifications are developed in §25.

Related distinction: Hyperculture and cultural essentialism The German sociologist **Andreas Reckwitz** distinguishes two late-modern *regimes of culturalization* in “*Zwischen Hyperkultur und Kulturessenzialismus*” (2016) and the related *Die Zeit* essay “*Alles so schön hyper*”. **Cultural essentialism** treats culture as the durable inheritance of a comparatively homogeneous community, organized by an ingroup–outgroup distinction and the preservation or

recovery of valued traditions. **Hyperculture** treats globally circulating cultural goods, practices, and identities as a diverse repertoire from which individuals construct singular ways of life.

There is a strong structural correspondence with the present framework, but not an identity:

Reckwitz's distinction	Translation into the present framework
Cultural essentialism	Resembles first-order mechanical solidarity : cohesion is sought through common substantive identities, practices, origins, and beliefs.
Hyperculture	Resembles first-order plurality combined with organic and market differentiation : cultural elements circulate, combine, and serve individual self-development. It is not itself a form of solidarity.
The normative order supporting hyperculture	Can take the form of lifted mechanical solidarity around diversity, tolerance, openness, self-realization, human rights, and legitimate cosmopolitan institutions.

The theories therefore ask different questions. Reckwitz classifies what culture is taken to be and how cultural value is produced; *lifted mechanical solidarity* identifies the level at which social similarity, legitimacy, and common moral authority are located. A hypercultural society can be highly plural at the first order while demanding strong conformity to a second-order affirmation of plurality.

This higher-order solidarity becomes epistemically problematic when terms such as *diversity*, *tolerance*, or *human rights* function as unchallengeable master signifiers, one authorized interpretation becomes compulsory, and disagreement is classified as hostility toward the value itself. That is an essentializing use of hypercultural meta-norms, not sufficient reason to classify every left-liberal, green, or cosmopolitan position as cultural essentialism. Claiming truth is not the criterion; the question is whether claims and interpretations remain corrigible or become identity- and authority-gated. Cultural essentialism and hyperculture can therefore both support or suppress epistemic agency through different authorities: tradition, religion, nation, and communal leaders in one case; prestigious media, professions, expert institutions, and cosmopolitan moral vocabularies in the other.

3. The epistemic predicament: dependence is unavoidable

The starting condition is **epistemic dependence**, not epistemic credulity. The immediate source is the American philosopher **John Hardwig's** paper "[Epistemic Dependence](#)" (1985), which argues that rational knowledge often depends essentially on trusting other knowers. The present entry extends Hardwig's person-to-person problem into institutional trust, mechanical solidarity, and the social routing of belief updates.

Modern knowledge is distributed. A person who consults a physician, relies on an engineer's safety calculation, uses a statistical series, accepts a historical date, or trusts a laboratory result is normally doing something rational. Testimony and institutional knowledge are not inferior substitutes for a purely personal knowledge that could realistically be achieved. They are constitutive parts of human knowing.

Healthy epistemic dependence can involve:

- division of cognitive labour;
- transactive memory, in which people know who is likely to know what;
- credentialed expertise;
- records and institutional memory;
- methodological standards;
- peer criticism and replication;
- trusted personal judgment in domains where another person has demonstrated competence.

The decisive distinction is between **reliance** and **preemption**:

“The authority’s judgment is important evidence that I should normally weight heavily.”

is different from:

“The authority’s judgment decides what evidence I am permitted to recognize.”

The first is delegated reality-testing. The second is delegated reality-permission.

Epistemic agency therefore cannot mean verifying everything personally. Such autarky would make a person less knowledgeable, not more. Agency consists in retaining **meta-authority** over dependence: the ability to understand why trust is granted, limit it by domain, calibrate it by performance, compare it with other routes to reality, and withdraw or revise it when warranted.

4. Socialization into institutional trust

Socialization teaches more than propositions and rules. It installs an **architecture of epistemic trust**.

The exact expression **socialization into institutional trust**, and the mechanism assigned to it here, are synthetic. Important antecedents are **Patrick Wilson's** account of [cognitive authority](#), **Niklas Luhmann's** analysis of [trust as a way of reducing social complexity](#), and **Anthony Giddens's** discussion of trust in [expert systems and other abstract systems](#). None of these authors proposes the whole Durkheimian many-to-few mechanism formulated below.

Children and citizens learn:

- which persons and offices may teach, diagnose, judge, certify, or interpret;
- which credentials and uniforms signify competence;
- which publications, channels, and formats count as official;
- which institutions possess jurisdiction over which questions;
- which sources are respectable, fringe, sacred, suspect, or inadmissible;
- what kind of challenge counts as inquiry and what kind counts as insolence or betrayal.

Much of this learning occurs before a person can independently assess the institutions involved. Later reasoning takes place through the trust structure that earlier socialization supplied. The person may know how to ask, "What does the recognized institution say?" without yet knowing how to ask, "Why does this institution possess jurisdiction here, and how would I recognize its failure?"

The recurring architecture can have the following shape:

```
large and diverse population
      ↓ shared socialization
common second-order classifications and legitimacy rules
      ↓
small set of elevated institutions, professions, and offices
      ↓
authorized spokespersons and communication channels
      ↓
certification of claims as presumptively reliable
```

This many-to-few architecture is an important form of modern mechanical integration, but it is not the definition of mechanical solidarity. Shared consciousness can also be horizontal and leaderless. Consensus itself can become the gatekeeper: "Everyone like us knows this." Conversely, a differentiated institution can possess legitimate authority without producing strong mechanical solidarity. The terms should therefore not be collapsed.

Section 12 returns to this asymmetry as a **privileged authority-addressed programming topology**: a recurrent and potentially powerful geometry within a mechanically solidary field, not a universal shape or a synonym for the field.

5. Epistemic gatekeepers and trust anchors

An **epistemic gatekeeper** is a person, role, institution, profession, identity, or communication channel whose authorization strongly influences whether a claim is admitted as credible. This is a functional use of the familiar word *gatekeeper*, not a claim that a single cited author established this exact category.

A **personal epistemic authority** is a narrower relationship in which another person's considered judgment itself constitutes evidence. The closest direct sources are Wilson's *cognitive authority* and the American philosopher **Linda Trinkaus Zagzebski's** [Epistemic Authority \(2012\)](#). Such reliance can be rational when competence, intellectual character, access, and record deserve trust. The person becomes a gatekeeper, in the more specific usage of this entry, only when this evidential weight acquires a permissioning function—when evidence effectively cannot enter except through their approval.

The gatekeeper need not be personally known. In an institutional form, the person speaking may be a replaceable interface:

The audience does not primarily think, “I know this speaker and have inspected their reasoning.” It thinks, “This speaker is authorized to represent the institution that society recognizes as competent in this domain.” The institution is the **epistemic trust anchor**; the spokesperson is the **institutional epistemic proxy**.

Several diagnostic observations follow:

- If the statement loses most of its authority when the same person leaves office, the institution was the real trust anchor.
- If an unknown successor can speak with equal force, the individual was primarily an interface.
- If the spokesperson loses credibility by contradicting the institution even while presenting the same evidence, institutional authorization dominated personal reasoning.
- If identical evidence is accepted or rejected according to branding, belief updating is substantially institution-gated.

Gatekeeping is not inherently pathological. Filtering can protect limited attention from fraud, noise, and incompetence. It becomes dangerous when the gatekeeper changes from a defeasible evidence source into what this entry calls a **reality-validation node** whose approval determines whether contrary evidence may count at all. Zagzebski’s **Preemption Thesis** is a relevant but not identical antecedent: it concerns how a recognized authority’s judgment can replace some of the subject’s own reasons. The pathological permissioning relation meant here is stronger and closer to what **Christoph Jäger** criticizes in “[Epistemic Authority, Preemptive Reasons, and Understanding](#)” (2016).

6. Forms of authority and epistemic spillover

The following table concerns authorities constituted *within* an order. Their competence can and normally should be bounded even when the lifted constitution that creates and coordinates their jurisdictions is universal at the second order. A parliament, court, profession, office, or expert does not inherit universal epistemic competence merely because the common legal and epistemic meta-order governs the allocation of its authority.

For example, a lifted legal order can govern universally what counts as lawful legislation, office, contract, consent, permissible terms, interpretation, enforcement, remedy, appeal, and correction. Particular legislatures, courts, officials, and contracting parties exercise only the competences that order constitutes for them.

At least four forms of authority should be distinguished:

Form	Legitimate function	Characteristic spillover risk
Coordination authority	Organizes common action and resolves operational decisions.	The right to direct action is mistaken for superior knowledge of every relevant fact.
Normative authority	States, interprets, or enforces rules and obligations.	The right to define a rule is mistaken for the power to determine empirical reality.
Epistemic authority	Supplies competent testimony or judgment in a defined knowledge domain.	Domain-specific competence is generalized beyond its evidence and expertise.
Pastoral authority	Guides a person’s welfare, identity, duties, conscience, or interpretation of life.	Care and intimate understanding become grounds for surrendering judgment.

Role-conferred epistemic authority spillover occurs when authority in one domain silently produces deference in another. A teacher's legitimate classroom authority, an officer's command authority, a priest's pastoral role, a manager's organizational authority, or a public institution's procedural legitimacy can be treated as if it guaranteed factual correctness outside the appropriate domain.

Mechanical solidarity facilitates spillover because disagreement may acquire a moral meaning. A factual challenge can be classified not as a proposed correction but as disobedience, disloyalty, ignorance, pollution, lack of compassion, or an attack upon the community. The authority then receives support not only from its own office but from peers whose reactions make the cost of doubt collectively visible.

Jurisdictional spillover is therefore a pathology of an authorized person, office, or institution exceeding its allocated competence. It is not evidence that the lifted meta-order itself should lack universal jurisdiction over how those competences are created, limited, coordinated, appealed, and corrected.

The pathological inference is:

“Because this person or institution is entitled to coordinate, represent, protect, or guide us, it must also be the correct interpreter of reality.”

7. One umbrella, not one continuum

The concepts gathered under this entry are related but are not interchangeable positions on a single scale from independence to gullibility. They are different kinds of things.

Concept	Semantic kind	Central question
Epistemic dependence	Social condition	From whom and through what institutions must I obtain knowledge?
Epistemic vigilance or credulity	Disposition and monitoring function	How carefully and symmetrically do I assess communicated information?
Epistemic gatekeeping	Relationship and network architecture	Through which nodes must a claim pass before I treat it as admissible?
Authority spillover	Transfer mechanism	Has legitimate authority in one domain acquired unearned force in another?
Persuasion	Belief-change process	By what operations is a judgment, identity, or evaluation being changed?
Narrative or causal story	Meaning-making medium	How are events organized into cause, blame, responsibility, and remedy?
Master signifier	Symbolic operator	Which privileged term organizes meanings, identities, and legitimate knowledge?
Mechanical solidarity	Form of social integration	How are people held together through shared classifications and sentiments?
Piety toward the real	Normative orientation	Does reality retain the right to correct the model and the authority?
Cognitive liberty	Developmental and normative achievement	Can the person take the inherited trust architecture as an object of reflection?

The whole field is multidimensional. Relevant axes include:

- degree of necessary dependence;
- calibration of trust;
- concentration or plurality of authority;
- domain limitation or spillover;
- symmetry or asymmetry in evaluating evidence;
- identity investment and need for closure;

- transparency of sources and methods;
- social cost of doubt, dissent, and exit;
- institutional capacity for correction;
- personal capacity for inexpensive direct verification;
- willingness to leave a question unresolved.

Someone can be highly dependent yet epistemically agentic, skeptical toward most sources yet preemptively deferential toward one, self-authored yet wrong, or socially conformist while relying on institutions that happen to be accurate. No single credulity score captures these configurations.

8. Authority-gated belief updating and asymmetric epistemic permeability

Authority-gated belief updating is the central pathological mechanism named by this entry. Both this label and **asymmetric epistemic permeability** below are proposed terms, not terms taken verbatim from the cited literature. Authority-gated belief updating occurs when the source's authorization controls the admissibility or weight of a claim before its content receives independent consideration.

Its simplest form is:

claim arrives

↓

Is it endorsed by my recognized authority,
identity, institution, or socially legitimate narrative?

- └ yes → admit, accept, or rationalize
- └ no → reject, distrust, or refer back to the authority

The associated observable pattern is **asymmetric epistemic permeability**:

- authorized information passes through easily;
- unauthorized counterevidence meets an unusually high burden;
- direct checks are displaced by consultation with the gatekeeper;
- a trusted source's error is explained away;
- an outsider's accurate claim is treated as suspect because of its origin;
- intelligence is used to defend the installed conclusion rather than expose it to symmetrical testing.

This resolves the apparent contradiction between being easy to persuade and hard to convince. The person is not open in every direction. They are highly permeable along authorized channels and comparatively impermeable across unauthorized boundaries.

This is therefore **not generalized gullibility**. A person may be suspicious, argumentative, and highly skilled at finding weaknesses in out-group claims. Their credulity is selective and routed. The question asked before "Is this true?" is "Who is entitled to say this?"

The strongest diagnostic case occurs when a person refuses an available, inexpensive verification—an original source, a transparent count, or a calculation using elementary arithmetic—and instead asks the gatekeeper what the answer is. Referring to expertise can be rational; refusing a decisive cheap check because it lacks social authorization indicates that the authority has begun to preempt evidence.

9. Epistemic vigilance, credulity, and closure

Epistemic vigilance, as developed by **Dan Sperber, Fabrice Clément, Christophe Heintz, Olivier Mascaro, Hugo Mercier, Gloria Origgi, and Deirdre Wilson** in "[Epistemic Vigilance](#)" (2010), is the family of processes by which communicated information is assessed for source reliability and content plausibility. **Epistemic credulity** is used here more broadly for an insufficiently discriminating readiness to accept communicated claims.

That broad usage overlaps with, but is not identical to, the narrower construct measured by **Chloe Campbell, Michal Tanzer, Rob Saunders, Thomas Booker, Elizabeth Allison, Elizabeth Li, Claire O'Dowda, Patrick Luyten, and Peter Fonagy** in "[Development and Validation of a Self-Report Measure of Epistemic Trust](#)" (2021), where *epistemic credulity* is one of three measured positions alongside trust and mistrust. In this entry, *credulity* normally refers to a nonclinical tendency or situational failure, not to a diagnosis. Ordinary authority-gated updating is usually selective. It may arise from:

- prestige bias;
- attachment or dependency;

- high need for closure;
- authoritarian submission;
- identity-protective cognition;
- fear of exclusion;
- lack of corrective mindware;
- information overload;
- genuine inability to inspect a technical claim;
- repeated experience that deference is rewarded and questioning punished.

Need for closure and authoritarian submission are susceptibility variables, not synonyms for mechanical solidarity or master signifiers. A conventionally anti-authoritarian person may be captured by counter-institutional master signifiers such as *Awakening*, *Resistance*, *The People*, or *Hidden Truth*. The deeper vulnerability is often a low tolerance for leaving the gap of uncertainty open.

Calibrated vigilance avoids both indiscriminate trust and indiscriminate distrust. Contrarianism is not agency if the person automatically reverses every institutional statement or submits to a counter-gatekeeper. Inverted authority-gating remains authority-gating.

10. Pastoral epistemic authority

Pastoral authority is authority legitimated through care, protection, guidance, personal knowledge, or concern for another person's welfare. The major theoretical antecedent is the French philosopher and historian **Michel Foucault's** account of *pastoral power*, including "[The Subject and Power](#)" (1982). Its epistemic form arises when the trusted guide becomes an interpreter not only of what the person ought to do but of what their experience means and what counts as reality.

This functional use overlaps with discussions of **pastoral power**, especially authority exercised through individualized guidance, care, confession, and direction of conduct. **Pastoral epistemic authority** is a narrower synthetic term for the resulting relation to knowledge; it should not be treated as an exact synonym for every historical or Foucauldian use of pastoral power.

Healthy pastoral epistemic authority can offer:

- counsel during uncertainty;
- interpretation where technical and existential questions overlap;
- accompaniment through fear or confusion;
- a trusted provisional judgment when the person cannot investigate alone;
- support for eventually recovering independent judgment.

It becomes **pastoral epistemic gatekeeping** when care preempts examination. Dependence feels like safety, disagreement feels like ingratitude or betrayal, and the guide's interpretation becomes more authoritative than the person's accessible evidence. The relationship can then transfer responsibility for judgment while preserving the subjective feeling of being protected.

Pastoral authority need not be personal. An institution may present itself as society's caretaker; an unknown spokesperson then inherits a pastoral tone from the office. The institution does not merely claim, "We possess relevant evidence." It claims, implicitly or explicitly, "We know what is happening, what it means for you, and what a responsible person should feel and do."

11. From local bigOthers to a mechanically solidary field

This section develops the field effect previewed in [Culture Mechanics](#). It preserves the individual-to-field order: homo duplex supplies the local source and receiver; communication among many such persons produces an emergent organization; that organization then acts back upon the individuals who sustain it.

Handoff from the individual architecture Five constructs must remain distinct:

Construct	Function in the present theory
Lacan's big Other	The shared symbolic order and, in the present functional translation, the on-the-wire protocol of language, law, roles, conventions, master signifiers, and recognized symbolic authority. This does not exhaust Lacan's concept.
Local bigOther	The individual sentiment classifier that executes the installed mythological lens and transmits and receives through the shared protocol.
Mechanical solidarity	Field coherence generated as compatible local bigOthers repeatedly produce and answer common classifications and sentiments.
Distributed bigOther	The dynamically maintained symbolic-affective network state reproduced through local bigOthers, institutions, roles, practices, stories, and artifacts.
Multi-mind-self	The distributed system when it becomes sufficiently integrated and continuous to perceive, remember, judge, intend, own, and act as a collective agent. Not every field or crowd reaches this threshold.

The relation is causal rather than synonymous:

```

LOCAL BIGOTHERS
individual sources and receivers
    ↓ communicate through
SHARED SYMBOLIC PROTOCOL / LACANIAN BIG OTHER
    ↓ may generate
MECHANICAL-SOLIDARITY COHERENCE
    ↓ maintains
DISTRIBUTED BIGOTHER
    ↓ may become sufficiently integrated as
MULTI-MIND-SELF

```

Field formation and back-action The originating physical analogy compares the local bigOther to a charged particle. A charged particle is a source of an electromagnetic field and is also acted upon by the field produced by other charges. Likewise, each local bigOther emits socially intelligible classifications and responses while remaining susceptible to the organized signals, expectations, sanctions, institutions, and apparent consensus produced by other nodes.

```

local classification
    ↓ encoded in word, gesture, symbol, role, or sanction
public signal enters the shared symbolic order
    ↓ interpreted and answered by other local bigOthers
reciprocal signals become patterned and mutually expected
    ↓
mechanical-solidarity field / distributed bigOther
    ↓ back-action
changes salience, feeling, legitimacy, trust, and perceived possibility
inside each participant
    ↻

```

Culture Mechanics gives the authoritative treatment of **ideological symbols**, **conformity signals**, and **targeting signals** at this individual-to-public interface. Performance, absence, refusal, substitution, imposition, or attribution can make conformity or target status publicly legible; the field mechanism here begins when other local bigOthers classify and answer that signal. Its private, collective, ideological-form, and fundamentalist program taxonomy, its separate jealousy and *Beseelung* axes, and its account of moralized character accusation are not repeated in this document.

The field is causally real within culture mechanics. It is implemented through persons, communication, institutions,

practices, and artifacts, but its relational organization cannot be reconstructed adequately by describing each person as if their psychology had formed in isolation. Public classifications alter incentives; institutions preserve memory; roles survive replacement of their occupants; signals become common knowledge; and each participant responds partly to what they expect others to expect. The field therefore has downward or back-action without requiring a carrier-free substance.

The analogy with a **photon** isolates a second hypothesis: an organized social meaning can retain relative identity while its biological and material carriers change. A law, office, ritual, master signifier, or institutional expectation may persist while speakers, documents, and officeholders are replaced. This is relative carrier-independence, not disembodiment and not a claim that symbolic messages are literally photons.

These comparisons are explanatory pictures and hypothesis generators. The theory does not posit a social electro-magnetic force, Maxwellian equations, or a physical identity between affective alignment and field physics.

Laser synchronization, magnetization, and cultural domains The originating umbrella for this family is deliberately memorable:

Culture Mechanics is the Quantum Mechanics of Psychology.

The intended comparison is statistical, micro-to-macro, and observational. Human capacities and local cultural processing that are inconspicuous in ordinary life can become publicly observable when many interacting persons produce collective order. The theory seeks population-level tendencies, distributions, thresholds, and feedback relations, not exceptionless prediction of every individual. The relevant scientific family is broader than quantum mechanics: it also includes classical statistical mechanics, nonlinear dynamics, phase transitions, and condensed-matter physics. The [Vicsek model of self-driven particles](#), for example, is a classical model in which neighbor alignment and noise produce a transition in collective motion.

When local bigOthers exchange signals and observe one another’s reactions, they can synchronize. The **laser analogy** emphasizes driven, temporally concentrated coherence:

Laser analogy	Culture-mechanical counterpart
Emitters	Individual persons and local bigOthers
Energy input	Fear, hope, anger, enthusiasm, moral concern
Coupling	Education, media, ritual, repetition, and institutions
Mode selection	Master signifiers and authoritative classifications
Phase-like alignment	Similar attention, affect, rhythm, interpretation, judgment, and response
Coherent output	Public mania, ritual effervescence, collective judgment, enforcement, or coordinated action

The originating formulation says that people can be:

charged with the mythologies of a multi-mind-self

and then discharge as a crowd moving with common direction and rhythm. This preserves the framework’s language of **Beseelung**: mythology can make a collective orientation affectively alive before a visible triggering episode. Preparation or synchronized discharge does not by itself establish that a multi-mind-self already exists. That threshold additionally requires continuing integration sufficient for collective perception, memory, judgment, intention, ownership, and action. Public manias can be deliberately engineered, accidentally amplified, or endogenously self-organized. They are not necessarily “unnatural,” and [astrophysical lasers](#) show that lasers are not exclusively human-made.

The complementary **magnetization analogy** makes durable spatial patterning more vivid. Local magnetic moments can align through interaction rather than invention by a central controller. A material may contain differently aligned domains, and a boundary can remain sharp even though the same underlying kinds of elements exist on both sides. **Remanence** is retained magnetization after the forming field is removed. In the social analogy it names the hypothesis that classifications, sentiments, and expectations can persist after a strong forming ritual, leader, institution, or media environment weakens. Likewise, neighboring populations may sustain distinct classifications, customs, and aesthetic expectations through dense local reinforcement.

Ferromagnetism depends upon quantum exchange, but ordinary iron should not be described as every component occupying one global quantum-coherent state. NIST's [review of metallic ferromagnetism](#) connects exchange-supported spin polarization with domain structure, while [Feynman's discussion of magnetic materials](#) explains domains, wall motion, and hysteresis. A laser is an open, pumped, dissipative process; a ferromagnet is ordinarily treated as an ordered material phase. Their shared structure is an abstract pattern of collective order and symmetry breaking, not one state or guaranteed universality class. Experiments can nevertheless describe a stochastic order parameter and spontaneous symmetry breaking in laser regimes; see [Ohadi et al.](#)

The originating Bavaria-and-Swabia observation illustrates the hypothesis. Customs such as *Blumenschmuck* or *Kehrwoche*, regional house forms, standards of cleanliness, and visible treatment of shared space may change markedly across a cultural boundary. The observation makes a proposed domain wall perceptible; it does not by itself establish a population-level mechanism, explain every resident, or show that boundaries are immutable. Migration, bilingual participation, institutions, media, and individual dissent can weaken, cross, or reorganize them.

The detailed magnetic-moment, domain, domain-wall, and remanence mapping is a user- and project-developed analogy, not Durkheim's theory. William James provides a closer psychological precursor: in *The Varieties of Religious Experience* he describes abstract realities as polarizing and magnetizing human lives. Gustave Le Bon uses "magnetic influence" and hypnotic fascination in *Psychologie des foules* (1895; [English translation](#)). Neither author proposed the culture-mechanical topology. **Coercivity, nucleation, domain expansion, and competing magnetization** remain candidate extensions, not canonical mechanisms.

First-order and **lifted mechanical solidarity** can both magnetize a field. In the first, alignment concerns shared concrete rules and answers. In the lifted form, alignment concerns the generator by which concrete answers are produced, applied, and corrected. The resulting answers may differ across time and situation without weakening solidarity because the shared operation has moved to a more abstract level, not disappeared.

These physical comparisons are explanatory pictures and hypothesis generators. Quantum mechanics is not merely statistical: the standard formalism gives probabilities for measurement outcomes while representing time evolution unitarily; see MIT's [Quantum Theory I lecture notes](#). People are also reflexive and strategic: they can interpret, resist, deceive, defect, and change the institutions being modeled. The analogy asserts no social wavefunction, quantum consciousness, or shared physical equations. For the relationship among the field, laser, magnet, clockwork, computing, and braiding pictures, see [Analogical Models in Culture Mechanics: A Semantic Inventory](#).

Observability, cultural forgetting, and contemporary witnesses The analogy family carries a stronger historical hypothesis than periodic activation of an otherwise intact collective being:

A society can lose the cultural knowledge, practices, narratives, rituals, and institutions needed to generate strongly synchronized multi-mind-selves.

The underlying human capacity may remain, just as the biological capacity for language remains even when a particular language disappears. The relevant cultural technology can nevertheless be forgotten. Rules may survive as fossils—followed through habit, convenience, or enforcement but no longer spiritually charged. They can coordinate people without **Beseelung**.

This possibility is part of the originating autobiographical account:

For the first nearly fifty years of my life, I was not aware of multi-mind-selves in their strongest expressions. I do not believe that I merely overlooked an active phenomenon. Its strongest forms were not there to be seen. I began to notice them when a sequence of public manias made their effects hard to miss.

The report is a theoretically generative observation and an autobiographical interpretation, not by itself a population-level demonstration of cultural loss. Its conceptual force is to deny that calm-period absence must mean dormancy. Lionel Shriver provides a neighboring contemporary diagnosis. In *"How to spot the next mania"*, she writes that since roughly 2012 she has been disturbed by renewed susceptibility to rapidly spreading "collective derangement" and identifies a succession of public manias. Her novel *Mania* (2024) turns that concern into fiction. Her testimony helps establish that she experienced a change in the phenomenon's visibility; it does not establish the present theory's mechanism.

For most everyday life, "Newtonian psychology" is good enough. Preferences, decisions, rule-following, cooperation, competition, and responses to incentives usually do not require a theory of multi-mind-selves. The explanatory demand changes when many persons suddenly align in attention, emotion, language, moral judgment, and action. A

normally inconspicuous human capacity then “shines through” into macroscopic life. The laser picture proposes one active sequence:

- cultural preparation through mythologies
- + emotionally charged triggering event
- + reciprocal observation and reinforcement
- + suppression or exclusion of counter-signals
- coherent collective passion and action

The **weak-field gravity analogy** concerns access to that sequence. When no strongly synchronizing multi-mind-self is present, the causal signature may be too weak to attract attention. Researchers observing only calm-period individuals can therefore mistake the sufficiency of ordinary psychology under those conditions for proof that no additional collective mechanism can ever become causally important.

A weak present-day signature leaves at least three historical possibilities open:

Calm-period condition	What remains	What a later trigger can do
Dormant	Living mythology and the old synchronization practices remain available but inactive	A suitable event can reactivate the familiar collective state
De-animated	Rules and symbols remain, but their sacred, affective, and identity-bearing connections have deteriorated	A trigger may produce compliance or mild sentiment without strong collective synchronization
Culturally lost	Only fragments or no viable transmission and activation system remain	A later “revival” may require construction of a successor system rather than reactivation of the former one

The distinction is not between effective and ineffective rules. “Do not cross when the pedestrian light is red” can coordinate conduct perfectly well while carrying little guilt, sacred attachment, identity, or capacity for collective sacrifice. *Dead* means affectively or spiritually dead in the originating dead-alive analogy. The loss of one synchronization technology also does not leave a person’s PCI slot empty: another operative mythological weave continues to occupy the local bigOther.

From calm-period remains alone, dormancy, de-animation, and cultural loss may be difficult to distinguish. Later observers can possess the old texts, words, and symbols while lacking access to their former animating force. This gives **Zeitzeugen**—contemporary witnesses—a specific evidential role:

Witness	Strong-field observation retained by this theory
Julien Benda	La trahison des clercs (1927) records political passions becoming coherent, continuous, sacred, morally systematized, and supported by intellectual production and communication.
Dietrich Bonhoeffer	“Von der Dummheit” (1943) records the person-level effect of overwhelming political or religious power: loss of inner independence and displacement of judgment by slogans and formulas.
Lionel Shriver	Her 2024 account records noticing a renewed succession of public manias, or what this framework calls collective demonstrations of our capacity to “lose our minds.”
Originating author	The autobiographical contrast places a long period of macroscopic absence beside a later period in which the proposed beings became difficult to miss.

Benda and Bonhoeffer are complementary. In the gravitational picture, Benda describes the massive body forming and the surrounding field intensifying; Bonhoeffer describes what can happen to a person already caught deep inside that field. These authors, Shriver, and the originating author are not calibrated instruments. They can be

selective, frightened, morally involved, synchronized, or mistaken. Yet when the primary phenomenon is no longer present, something is better than nothing: reports by people who were there and tried to capture the effect in words are the next-best evidence of its experienced form. Situatedness creates bias, but it also creates access.

The resulting observability thesis is:

Culture Mechanics is difficult to discover because its underlying human capacities and local processes are usually inconspicuous, and cultures may even lose the practices that once made them macroscopically visible. A tightly synchronized multi-mind-self is therefore not always available for direct study. During a calm period, its mythology and synchronization practices may remain dormant and capable of reactivation. But the culture may also have forgotten how to produce the state: its living mythologies may have deteriorated into affectively dead rules, detached symbols, and habitual procedures, or a viable transmission system may have disappeared. From the weak present-day signature alone, we may be unable to distinguish dormancy from cultural decay or extinction. Only under exceptional conditions do these capacities break through into macroscopic life as collective effervescence, public mania, intensified mechanical solidarity, or a tightly synchronized multi-mind-self. Contemporary witnesses are therefore important because they observed the rules, symbols, and mythologies while these were still spiritually charged and collectively active. If we study humanity only during calm periods, we may mistake the temporary or historical absence of these beings for evidence that they cannot exist.

Gravity models **detectability**, not the collective phenomenon’s ontology. Gravity becomes weaker with distance, whereas a particular cultural system may genuinely decay or disappear. Nor does ordinary orbital weightlessness mean that gravity is absent: an orbiting spacecraft is in free fall, as [NASA’s account of orbital mechanics](#) explains. The precise physical picture is therefore a spacecraft in a weak-field region far from massive bodies. [Analogical Models in Culture Mechanics: A Semantic Inventory](#) places this limit inside the complete nested analogy.

Activation profiles and episodic multi-mind-selves Collective agency and momentary synchrony have different temporal profiles. A multi-mind-self can remain a continuing agent through records, roles, trained members, decision procedures, institutions, property, and recurrent practices without remaining laser-synchronized at every moment. Conversely, a distributed bigOther can cross the collective-agent threshold only during a bounded episode. The latter is an **episodic multi-mind-self**:

An episodic multi-mind-self is a distributed bigOther that becomes sufficiently integrated to perceive, remember, judge, intend, own, and act as a collective agent only during bounded periods of adequate coupling, common attention, reciprocal feedback, and coordinated execution.

The adjective *episodic* is preferable to *temporal*, because every collective is temporal. It identifies threshold crossing and state change rather than mere duration.

Profile	Baseline	Activated state	What persists afterward
Continuing multi-mind-self with variable gain	The collective remains an agent through low-intensity clockwork coordination	A crisis or ritual produces intensified laser synchrony	The same institutional self returns to lower gain
Episodic multi-mind-self	A viable distributed bigOther remains below the collective-agent threshold	A bounded event temporarily supplies sufficient integration and collective action	Identity-bearing practices and memory permit later reactivation
Latent distributed bigOther	Mythology and activation procedures remain viable but are not presently integrated as an acting self	A suitable trigger may reactivate the old configuration	The possibility of recurrence remains
De-animated remainder	Rules, symbols, or procedures persist without their former sacred and affective force	A trigger may produce coordination without the former collective being	Function survives more readily than animation
Culturally lost machinery	No viable transmission and activation system remains	A later movement must construct a successor rather than wake the old system	Fragments need not preserve the former identity

The familiar **sleep–waking analogy** fits only the viable-latency cases. Human identity is materially anchored by one organism across sleep. A distributed collective instead depends upon calendars, texts, places, offices, rituals, artifacts, memories, and trained participants to preserve an identity-bearing path between episodes. If those carriers and reactivation relations have disappeared, the old collective is not asleep; it may be extinct.

Three boundary cases clarify the distinction:

Candidate	Baseline state	Peak state	Interpretive limit
Catholic pilgrimage (Wallfahrt)	Church, calendar, route, shrine, liturgy, stories, and trained participants preserve a latent or continuing religious field	Common movement, prayer, song, place, and mutual observation can produce short-lived collective effervescence and a possible episodic multi-mind-self	Strong synchrony or felt boundary-softening does not prove subjecthood absorption; differentiated pilgrims, clergy, musicians, caregivers, and dissent can remain
Military unit in battle	Training, command roles, records, equipment, traditions, and unit identity may preserve a continuing institutional agent	Danger, shared attention, rapid signals, and ferocious coordinated action can create an exceptionally high-gain mode with possible temporary fusion	Disciplined combined-arms action can be highly agentic yet differentiated; panic or a rout can be contagious without coherent agency
Subak irrigation and temple system	Irrigation, allocation, ritual, governance, memory, and common ownership can sustain relatively low-intensity continuing agency	Maintenance, drought, allocation conflict, or ritual can create periodic laser moments	The example is an originating interpretation and hypothesis, not proof that Subak has one phenomenal consciousness

The Subak case is especially useful because it shows how a multi-mind-self might remain continuous without permanent laser synchronization. Its ordinary operation can be substantially clockwork-like while periodic laser moments renew the moral, ritual, and institutional protocol. A military unit can display the same pattern at a shorter timescale. A pilgrimage more plausibly tests the episodic threshold.

A multi-mind-self need not remain laser-synchronized continuously. It may persist through distributed memory and organization while moving between low-activation clockwork operation and high-activation laser episodes.

Activation and fusion remain independent questions:

Activation asks whether the collective is presently acting as a self. Fusion asks what standing participating persons retain while it does so.

An activated collective can therefore remain differentiated; it can become temporarily absorptive; or a latent distributed bigOther can remain below the multi-mind-self threshold. Likewise, intense copying or common rhythm may fail to form an agent if continuing perception, memory, judgment, intention, ownership, or organized action is missing.

Crowd modes, collective effervescence, and Durkheim’s solidarities The project uses three ideal-typical crowd modes. A **random crowd** shares space without a common task and is weakly coupled for the variable under study. A **clockwork crowd** routes differentiated roles or aggregates independent contributions toward a common result. In **routed clockwork**, as in a pit crew, participants are functionally interdependent through interfaces and handoffs. In **aggregative clockwork**, as when independent forecasts are externally averaged, the contributors may have little functional dependence upon one another even though their variety improves the aggregate. A **laser crowd** aligns timing, attention, affect, interpretation, judgment, or action. *Mythology Construction*, “Coordination, synchronization, and the coupling thermostat,” gives their design-level treatment.

The governing reader picture is:

Coordination and synchronization are the two ends of a single continuum of interaction strength.

This is an ideal-typical continuum rather than a claim that every empirical group has only one dimension. Here interaction strength primarily means pressure toward shared timing, attention, affect, interpretation, and response. Functionally interdependent specialists may remain clockwork-like, and an orchestra or pit crew can combine differentiated roles with temporary high synchrony.

A compact diagnostic separates **synchrony** S, **functional coupling** F, and **task error** E. S asks whether participants are in step, F asks how their contributions depend upon or hand off to one another, and E asks whether the result performs the specified task accurately. A Kuramoto-style order parameter r can instantiate S where a meaningful phase exists; mean squared error can instantiate E where a target exists. Neither quantity defines a crowd mode or a form of solidarity, and MSE does not measure functional dependence. The full measurement note and its boundary cases are in [Analogical Models in Culture Mechanics: A Semantic Inventory](#).

The project-developed Durkheimian correspondence is:

mechanical solidarity ↔ laser synchronization
 organic solidarity ↔ clockwork coordination

The compact relationship table prevents process, cohesion, durable state, organization, and meta-order from being treated as synonyms:

Construct	Kind of thing	Typed relationship in this model
Laser synchronization	Dynamic alignment process	Can dynamically produce or periodically renew mechanical solidarity
Collective effervescence	Intensified ritual or assembly experience	Resembles a laser moment and can carry its renewing work
Mechanical solidarity	Cohesion through common classifications and sentiments	Can be produced or renewed by alignment and stabilized as durable field order
Magnetization	Picture of durable aligned state, domains, and remanence	Stabilizes or preserves the orientation after an active laser episode
Clockwork coordination	Differentiated organizational mode	Resembles the routed functional organization associated with organic solidarity
Organic solidarity	Cohesion through differentiated interdependence	Is enabled and expressed by differentiated roles, not defined by low synchrony
Lifted mechanical solidarity	Shared binding meta-order	Can supply the moral and constitutional protocol legitimating the clockwork system
Multi-mind-self	Collective agent above an integration threshold	May emerge from sufficient continuing integration; no preceding relation makes it automatic

The relation is **resembles, supports, or renews**, not **is identical to**. Laser synchronization is a dynamic process; mechanical solidarity is a form of cohesion through common classifications and sentiments. Clockwork coordination is an organizational mode; organic solidarity is cohesion through differentiated interdependence. Mechanical and organic solidarity can coexist, and a magnetized mechanically solidary field can remain stable without an active laser state.

The preferred term is **clockwork coordination**, not *clockwork synchronization*. Clockwork names differentiated contributions connected through roles, interfaces, handoffs, aggregation rules, and a common meta-order. It has an affinity with [differentiated unity](#), but the two are not identical: clockwork describes organization in action, whereas differentiated unity describes the standing retained by persons and subordinate parts within a real shared *we*.

Laser synchronization likewise does not by itself mean [subjecthood absorption \(fusion\)](#). A **bounded laser synchronization** aligns a selected variable for a limited task, time, or jurisdiction. A choir, emergency team, ritual assembly, or pit crew can therefore synchronize intensely while retaining differentiated members and bounded authority. A **generalized and jurisdictionalized laser synchronization** extends the demanded alignment across

domains, maintains it beyond the original task, treats independent judgment as noise or betrayal, and makes the shared classification compulsory. That is a pathway to **fusion pressure**, not proof that fusion has occurred.

Vince Gilligan’s Apple TV series *Pluribus* (2025) supplies a fictional limit case. Its “Joining” generalizes common goals, values, knowledge, affect, and action across nearly all humanity and seeks to absorb the remaining immune persons. The story therefore dramatizes the path from generalized and jurisdictionalized alignment to subjecthood absorption. It ultimately exceeds the laser analogy, because its characters become one literal shared consciousness rather than distinct persons synchronized in selected variables. [The analogy inventory’s Pluribus note](#) states the mapping and non-inference.

The Borg in *Star Trek* supply a hostile counterpart at approximately the same fictional endpoint. Their interconnected collective consciousness forcibly assimilates persons and technology, pursues perfection by adding useful distinctiveness to itself, and answers independent refusal with “Resistance is futile.” The comparison separates absorptive architecture from program content: *Pluribus* presents fusion through peace, happiness, and care, while the Borg present it through efficiency, adaptation, dominance, and coercion. In both cases, independent subjecthood and exit cease to have standing. The Borg sharpen the distinction between functional variation and differentiated unity: a collective may preserve a person’s capabilities as collective resources while abolishing the person as their independent owner and judge. [The analogy inventory’s Borg note](#) states the detailed mapping, vocabulary qualification, and non-inference.

Two axes must consequently remain independent:

Axis	Low or failing pole	High pole	It does not decide
Cultural interoperability	Society-wide translation and common procedure fail	Differentiated groups remain able to share a cultural or political field	Whether persons are absorbed into a collective subject
Subjecthood absorption	Personal and subordinate standing is protected	Judgment, conscience, purpose, property, loyalty, identity, refusal, and exit are subordinated to the collective	Whether groups can translate or coordinate across their differences

High cultural interoperability with low subjecthood absorption is the characteristic space of person-preserving differentiated unity. High interoperability can also be closed and absorptive; low interoperability can coexist with intense local laser synchronization and local fusion pressure. [Mythology Construction, “Cultural interoperability and its breakdown \(Babelization\)”](#) defines the first axis and its relationship to lifted mechanical solidarity.

Durkheim’s *Les formes élémentaires de la vie religieuse* (1912) describes assemblies in which a “sort of electricity” forms, sentiments echo and amplify, and gestures and cries become rhythmic and unified. The [English translation](#) also calls religious technique a “sort of mystic mechanics.” **Collective effervescence** can therefore resemble a laser moment without becoming laser physics.

Lifted mechanical solidarity can supply the shared moral or constitutional protocol under which differentiated roles, professions, and institutions remain legitimate and mutually intelligible:

The laser moment periodically regenerates the moral protocol used by the clockwork system.

This recursive claim does not make every synchronized crowd a multi-mind-self or every mechanically solidary order epistemically captured.

Repeaters and crowds Every local bigOther transmits. A **repeater** is not a different species of person but a node with greater gain, reach, credibility, frequency, connectivity, or institutional amplification. A teacher, priest, officer, celebrity, editor, manager, party official, or institutional spokesperson may therefore influence many more receivers than an ordinary participant.

The Wi-Fi analogy must not obscure aggregate gain. A synchronized crowd of weak transmitters can equal or exceed one strong repeater: applause, silence, repetition, visible unanimity, ridicule, or coordinated refusal becomes a high-amplitude signal precisely because many participants enact it together. Nor is amplification always vertical. Peer groups, rituals, crowds, and decentralized networks can synchronize without a privileged leader.

Trusted opinion leaders, cascades, and cultivated authority The repeater definition deliberately remains minimal: it identifies unequal transmission gain. Applied analysis should not compress that inequality into one scalar “influence” score. Two people with similar reach may work through very different relations and create different capture risks.

A **trusted opinion leader** is a person to whom members of a field recurrently refer for judgments, interpretations, or validation, and whose position consequently gives their classifications disproportionate credibility, transmission, or field-organizing force within a specified jurisdiction. *Trusted* describes socially operative trust, not necessarily warranted trust. *Opinion* includes factual judgments, interpretations, recommendations, and demonstrations of what competent or proper people do; it does not restrict the role to expressions of subjective preference. *Leader* identifies a human position without implying formal command or office.

The phrase and composite definition are proposed here by adapting the broader opinion-leadership literature. They are not a camel-case renaming of the established medical-marketing category *key opinion leader*. The similarity is nevertheless intentional: **key opinion leader** and **trusted opinion leader** run substantially in parallel as human positions whose influence depends upon recognition by a receiving field, trust or authority within a jurisdiction, privileged transmission, interpretation, peer diffusion, and feedback. The developed body of research on KOL identification, cultivation, credibility, network effects, disclosure, conflicts of interest, and influence measurement can therefore supply hypotheses, methods, comparison variables, and warning signs for studying trusted opinion leaders. Transfer is not automatic validation: medical KOL findings remain domain-bound empirical results, while the trusted-opinion-leader construct is broader and belongs to the present Culture Mechanics synthesis.

A trusted opinion leader may combine repeater gain, personal epistemic authority, gatekeeping, translation, modelling, brokerage, pastoral guidance, institutional representation, and field feedback. Not every repeater is a trusted opinion leader: a crowd, institution, channel, or algorithm can amplify strongly without being a person, while a person with extensive reach may still not become someone to whom recipients refer their judgment.

A **trusted-opinion-leader profile** should therefore ask at least:

Axis	Diagnostic question
Transmission capacity	What are the person’s reach, frequency, connectivity, brokerage, access to common attention, and institutional or algorithmic amplification?
Authority basis	Does reception rest on demonstrated expertise, personal trust, formal office, institutional authorization, pastoral care, familiarity, prestige, or parasocial attachment?
Routing function	Does the person select, gatekeep, translate, interpret, model, endorse, or relay material—and can they return audience resistance and needs to the source?
Jurisdiction	For which topic, audience, setting, channel, and period does the person actually carry authority?
Independence and correction	Who supplied access, funding, evidence, wording, status, and amplification; are apparently plural leaders causally independent; and can the person and message be corrected or replaced?

This profiles a human social position, not a psychological essence and not a claim that all dimensions covary. The same axes can be applied analogically to an office, institution, channel, or other nonhuman authority node without redescribing it as a leader. A medical **key opinion leader** can be a domain-specific subtype when the professional field actually refers judgments to that person; the industry label alone does not establish the relation. Such a person may combine scientific expertise, personal epistemic authority, professional office, institutional proxy, gatekeeping, translation, peer brokerage, and access to congress or guideline audiences. A social-media influencer may become a trusted opinion leader through repeated familiarity, perceived authenticity, identity fit, parasocial attachment, follower interaction, visible engagement, and platform-allocated attention, but audience size alone is insufficient. A physician creator may occupy both the medical-KOL and influencer profiles. Neither category is a synonym for *repeater*: each can bundle repeater gain with other authority relations already distinguished by this theory.

Influence should be identified from the receiving field rather than inferred from title, publication count, follower count, or formal rank alone. Healthcare implementation research distinguishes sociometric nomination by peers,

key-informant identification, self-designation, and observation of behaviour or network effects. These methods need not select the same people. The 2019 Cochrane review [Local Opinion Leaders: Effects on Professional Practice and Healthcare Outcomes](#) found moderate-certainty evidence that interventions involving local opinion leaders probably improve professional compliance with evidence-based practice, while effects varied and evidence for patient outcomes remained very uncertain. That result supports conditional, jurisdiction-specific influence; it does not validate the full culture-mechanical ontology or show that famous speakers are the locally effective trusted opinion leaders.

The topology is also partly endogenous. Institutions, sponsors, movements, and platforms can discover existing trusted opinion leaders or prospective leaders, appoint them to offices, or amplify and cultivate their positions through research access, authorship, speaking opportunities, professional introductions, office, media exposure, recommendation systems, and repeated visibility. Brian Gac and colleagues' archival study "[Pharmaceutical Industry Use of Key Opinion Leaders to Market Prescription Opioids](#)" (2024) documents companies identifying, recruiting, and developing people they called KOLs. The finding establishes that authority topology can be deliberately modified in that historical setting. It does not establish that every cultivated authority is insincere, every payment is corrupting, or every transmitted conclusion is false.

Privileged transmission is commonly bidirectional and multistage. A node can translate evidence or programme content into the field's recognized language, detect objections and practical barriers, and return that information to the source, which then adapts later messages. Transmission may proceed through nested jurisdictions:

At each handoff, wording, emphasis, evidential status, and provenance can change. Several visible authorities may therefore be one causal source repeated through different faces, while one message may mutate from tentative evidence into expert interpretation, recommendation, local shorthand, and finally "what competent people do." Leila Agha and Dan Zeltzer's [Drug Diffusion through Peer Networks: The Influence of Industry Payments](#) finds payment-associated prescribing changes among paid physicians and their peers in one anticoagulant market; it supports the reality of peer spillovers there, not a general claim that all cascades are paid or manipulative.

The portable lifecycle is therefore a candidate analytical map, not a universal campaign law:

field sensing → leader identification, appointment, or cultivation → message or evidence selection → seeding and legitimation → translation → nested cascade → horizontal normalization → institutionalization → maintenance, correction, or replacement

Analysis should track the source, incentives, transformations, independent routes, field feedback, and propagation of later corrections through this lifecycle. The same architecture can diffuse accurate practice, repair a failed tradition, sell a product, or support covert capture. Influence and truth remain separate variables.

bigOther-presence as the local experience of field back-action The field is not normally experienced as a sociological diagram. Within a participant it may appear as **bigOther-presence** or **bigOther-as-Thou**: God, Destiny, Nation, History, the People, or the Cause seems objectively present, addresses the person, observes conduct, and can receive loyalty or sacrifice. The terms were defined in [Culture Mechanics](#), with William James and Martin Buber as partial phenomenological antecedents. They are project-developed terms, not concepts those authors used for this field mechanism.

This formulation connects the two levels without equating them. The distributed field is the relational organization; bigOther-presence is one way its authority can become locally present to consciousness; the local bigOther is the

processor through which the presence is classified and made conduct-directing. A reported religious or moral presence may have additional meanings or causes that this functional account neither proves nor disproves.

The epistemic field effect The main cognitive processor can reason in detail, but field back-action can alter which questions feel permissible, which evidence feels contaminated, which source seems entitled to speak, and which conclusion promises belonging. This explains why intellectual ability does not guarantee epistemic independence. A powerful reasoner can become a more effective advocate for a direction already made emotionally compulsory.

An authority, institution, or apparent consensus can thus become the pole through which the field routes belief updates. Socialization supplies legitimacy; common signals make that legitimacy visible; and the participant's local bigOther marks unauthorized checking as insolent, shameful, dangerous, or disloyal. Authority-gated belief updating is therefore not only an individual bias. It can be a field effect whose participants continually reproduce the very authority to which they defer.

A closely related concept is **ideological power**. The German psychologist **Rainer Mausfeld**, explicitly borrowing from the sociologist **Michael Mann's four-source theory of social power**, uses it in *Hybris und Nemesis* for the power to shape the sense-making categories, interpretive contexts, and framing narratives through which people construct social reality. This overlaps strongly with culture mechanics and causal stories. The difference is one of level and scope: *ideological power* names a capacity to organize other people's interpretive world, especially for domination, whereas the field account also includes decentralized emergence, receiving-side back-action, and truthful, corrigible solidarity. Ideological power is one possible cause or strategic use of the field, not its synonym.

The result can be what this entry calls **Bonhoefferian Dummheit**, after the German theologian **Dietrich Bonhoeffer's** 1943 reflection "[Von der Dummheit](#)" ([PDF of the complete section](#)) ([HTML transcription](#)): a socially induced loss of inner independence in which formulas and slogans speak through people whose ordinary intelligence remains intact. Bonhoeffer did not formulate the culture-mechanical field model, and *Dummheit* is neither an IQ category nor a clinical diagnosis. The family resemblance is that intelligence has been placed downstream of a socially protected classification and recruited to elaborate or defend it.

12. Privileged authority-addressed programming topology

Privileged authority-addressed programming topology is a provisional label for an originating structural hypothesis: mechanical solidarity often becomes especially transmissive when a comparatively uniform audience is oriented toward a differentiated and elevated speaker position.

```
comparatively uniform audience
many persons occupying a common receiver role
                        ↑ common attention
                        |
one differentiated position
teacher / officer / priest / leader / authorized institution
                        ↓ common address
words + narrative + symbols + classifications + expected response
```

The authority can be weak in the coercive sense and still be structurally privileged. A teacher standing before a class need not terrorize the pupils. The room, timetable, common curriculum, assigned roles, right to address everyone, and shared expectation of attention already distinguish one position from the many. Military formations, religious assemblies, political meetings, corporate briefings, and institutional press conferences can reproduce the same broad geometry with very different degrees of coercion and legitimacy.

The authority also need not be a personally known human being. An unknown speaker can occupy the interface of a trusted institution:

```
institution socialized as legitimate trust anchor
                        ↓ authorizes
replaceable officeholder or spokesperson
                        ↓ addresses
population already trained to recognize the office
                        ↓
claim arrives with institutional and field authority
```

The *Volksempfänger* provides a vivid historical illustration of technological replication. The cheap radio did not create German solidarity by itself. It allowed a regime to reproduce the one-speaker/many-listeners relation inside many homes, coordinate attention, and make a distant voice present as the authorized voice of the collective. The apparatus illustrates a topology; it does not prove that broadcasting always persuades or that every mass medium has the same political effect.

The proposed programming state The stronger originating hypothesis is that this geometry can do more than transfer information. Under some conditions it helps place participants in an unusually receptive **programming state** in which attention, affect, identity, common reception, and perceived authority reinforce one another. A message can then activate, reinforce, or—through repetition and experience—alter the mythological lens more effectively than the same propositions presented as an ordinary private claim.

No single established literature already validates that compound state. The proposal synthesizes several partially overlapping mechanisms:

- *Sigmund Freud's Group Psychology and the Analysis of the Ego (1921)* analyzes leader attachment, horizontal identification among followers, and the proximity of group influence to being in love and hypnosis. Freud supplies a historical psychoanalytic neighbor. His explanation through individual libidinal ties and identification does not replace the present emergent-field ontology and is not a complete empirical explanation of it.
- **Narrative transportation**, studied by *Melanie C. Green and Timothy C. Brock (2000)*, combines attentional focus, imagery, and affect and can increase story-consistent belief. Transportation can occur without formal authority and therefore does not establish the topology by itself.
- **Parasocial interaction**, introduced by *Donald Horton and R. Richard Wohl (1956)*, explains how a mediated figure can be experienced in a relation resembling face-to-face intimacy. It helps explain distant presence, not collective field coherence on its own.
- *Michael Suk-Young Chwe's Rational Ritual (2001)* explains how public rituals generate common knowledge: participants know not only the message but that others received it. Common reception supports coordination without proving affective programming.
- *Pierre Bourdieu's Language and Symbolic Power* shows that the efficacy of authorized speech depends upon office, setting, recognition, and social power as well as sentence content. Bourdieu's concept of field is not the electromagnetic analogy proposed here.
- *Randall Collins's Interaction Ritual Chains (2004)* analyzes mutual focus, rhythmic entrainment, shared mood, collective effervescence, group symbols, and emotional energy. It is strongest for interaction rituals and does not by itself establish identical effects in remote mass audiences.

The culture-mechanical synthesis is:

```

recognized authority position
  + common attention and common reception
  + narrative, symbol, rhythm, and affect
  + vertical attachment and/or horizontal identification
  + visible or imagined reactions of fellow members
      ↓
heightened receptivity and mutually reinforced classification
      ↓
activation, reinforcement, or reprogramming of local bigOthers
      ↓
stronger mechanical-solidarity field
  
```

This topology is **privileged, not universal**. Horizontal peer exchange, a leaderless crowd, a decentralized network, private reading, direct experience, or many weak transmitters can also create or change solidarity. A formal authority can fail when the audience distrusts the office, uses incompatible lenses, divides its attention, privately rejects the message, or sees that others reject it.

The hypothesis is also truth-neutral at the level of mechanism. A good teacher can use the geometry to transmit accurate, inspectable knowledge; a propagandist can use it to install a false causal story. Common reception can coordinate lifesaving action or suppress a cheap reality check. Evaluation therefore requires at least three separate questions:

1. Does the topology in fact increase receptivity or synchronization here?
2. Does the communicated model track reality and remain corrigible?
3. Does the relation preserve the participant's capacity to inspect, refuse, and later revise it?

Possible tests should compare the same message across authority and peer positions, private and publicly common reception, narrative and non-narrative forms, synchronized and unsynchronized audiences, and compatible and incompatible prior lenses. Failure to produce differential retention, sentiment, coordination, or deference would weaken the claim that this geometry has a special programming effect.

13. Unitary ownership by the multi-mind-self

The originating claim is deliberately stronger than the ordinary phrase **shared ownership**:

Successful shared ownership is not psychologically shared among many separate owners. One multi-mind-self owns; many *beseelte* persons perceive, care, judge, and act as organs of that unitary owner.

Here **organs** names functional contribution to collective agency, not subjecthood absorption. A unitary owner can preserve the members’ personal judgment, conscience, property, relationships, refusal, and bounded subordinate jurisdictions. The ownership claim therefore does not entail fusion; the person–collective constitution must be assessed independently.

The German adjective *beseelt* means animated, ensouled, or inwardly moved. In the present theory it names the condition in which a biological person is animated by the collective perspective strongly enough that the group’s object is experienced and treated as **ours** without a private cost-benefit calculation being required on every occasion. The term does not imply possession, the erasure of personal consciousness, or release from individual moral and legal responsibility.

This proposition distinguishes three meanings often collapsed by the phrase *shared ownership*:

Meaning	Question
Legal ownership	Which natural or juridical person holds recognized title, rights, liabilities, and powers?
Organizational group agency	Does a decision procedure allow a group to form coherent judgments and intentions and act upon them?
Culture-mechanical unitary ownership	Does an integrated distributed bigOther experience, protect, maintain, and act through an object as one continuing collective self?

Legal title can exist without lived ownership. A company may legally own an asset while employees treat it as nobody’s concern. Conversely, people may care for a street, railway, irrigation system, institution, or inherited practice as *ours* even though none holds personal title. Culture-mechanical ownership names the psychological and social organization, not the legal rule.

The intellectual neighbors clarify but do not establish the proposed mechanism. [Otto von Gierke’s account of the real unity of human associations](#) and his theory of the **group-person** reject the idea that an organized association is only an aggregate or legal fiction. [F. W. Maitland’s “Moral Personality and Legal Personality”](#) explores how an organized group can possess moral and legal personality and act through human organs. [Christian List and Philip Pettit’s Group Agency \(2011\)](#) supplies modern criteria for when organizational procedures support genuine group judgments and intentions. None describes the local bigOther, mechanical-solidarity field, *Beseelung*, or the present unitary-ownership mechanism.

Failure contrasts Two people assigned a joint task do not thereby become one owner. They may divide the work, protect only their own contribution, blame one another, or comply only while supervised. Coordination exists, but no continuing collective perspective organizes perception and care.

Likewise, a shareholder may legally own a fraction of a company while experiencing its property only as an instrument for private return. Distributed title is not evidence that a multi-mind-self owns. The strong claim concerns the opposite case: many people act from one socially present *we* even where personal title is absent or practically irrelevant.

Positive illustrations and hypotheses

- The **Subak irrigation and temple system** is retained as an originating reading of successful collective ownership. [UNESCO’s account of Bali’s Subak landscape](#) describes cooperative water management, temples, democratic

and egalitarian practice, and a system binding spiritual, human, and natural domains. Water, ritual, coordination, maintenance, and local obligation can therefore be investigated as parts of one continuing social system enacted by many participants. The example illustrates what the theory seeks to explain; UNESCO does not assert a multi-mind ontology, and the collective-agent and ownership thresholds remain independent hypotheses.

- The **Bahner** names a proposed historical organizational ethos in which a railway worker could perceive the railway as *our railway* and act for its reliability beyond the immediately measured private task. This is an originating hypothesis about Deutsche Bahn and its predecessors, not an established finding about every employee or period.
- **Clean German cities**, *Kehrwoche*, flower decoration, and care for common space illustrate possible civic ownership: a resident treats a street or shared place as belonging to the collective self rather than as an external surface serviced by someone else. The observation is vivid but not population proof.
- **Careful treatment of another person's property** shows that the relevant owner can be lifted to a second-order moral community. The object remains legally theirs, yet a shared norm makes respect for another member's property part of what we protect. This explains care without pretending that legal title has changed.

These cases should not be generalized into the claim that every orderly community or conscientious worker instantiates a multi-mind-self. Alternative explanations include personal virtue, incentives, surveillance, habit, professional identity, reciprocity, and explicit rules. The theory earns explanatory force only where the unitary collective perspective predicts perception, care, memory, sanction, and action better than those alternatives alone.

Threshold and boundary conditions Mechanical solidarity and a distributed bigOther can exist below the threshold of a collective agent. Evidence for a **multi-mind-self** becomes stronger when the system shows several of the following across changing individual carriers:

- a continuing group perspective distinguishing *ours* from merely private or external objects;
- memory preserved in roles, records, ritual, practice, and institutional correction;
- group-level judgment and intention that cannot be identified with one current member's preference;
- coordinated perception, maintenance, defense, and use of the owned object;
- expectations and sanctions that recruit replacements into the same perspective;
- capacity to notice failure, revise action, and preserve continuity through turnover;
- organs authorized to speak and act for the whole without becoming its private owners.

Disorganization, rapid dissolution when one leader exits, pervasive free-riding, incompatible group judgments, inability to learn, or conduct fully predicted by private incentives weakens the collective-agent interpretation. The field is not called a multi-mind-self merely because the metaphor sounds vivid.

Unitary ownership also does not make the collective morally superior or its objects sacred. A multi-mind-self can own unjustly, neglect outsiders, suppress individual rights, or direct members toward harm. Collective agency increases the need to locate responsibility among the group, its procedures, officeholders, and the biological persons through whom it acts; it does not dissolve responsibility into the field.

14. Master signifiers and the organization of knowledge

In Lacanian terminology, a **master signifier** or **S1** is a privileged signifier that organizes other meanings and identifications. Lacan develops the relation of S1, S2, knowledge, and authority most directly in *Le Séminaire, Livre XVII: L'envers de la psychanalyse (1969–1970)*. Terms such as *Nation, Justice, Science, Safety, Tradition, Freedom, Human Rights, or Revolution* can perform this function.

In the culture-mechanical translation, a master signifier is a **highly compressed protocol token**. It does not carry the whole mythological lens in its surface form. It indexes and activates an already installed complex of stories, classifications, authorities, identities, sentiments, and expected conduct. As M can designate a mathematical mapping and $\mathbb{E}$ a field, an S1 can coordinate a large meaning structure without restating it. The compression makes coordination efficient while allowing the activated structure to remain tacit and difficult to inspect.

A master signifier, mechanical solidarity, and laser synchronization are related but not identical:

- the **master signifier** is a compressed symbolic operator or mode selector in the shared protocol;
- **laser synchronization** is a dynamic process of alignment;
- **mechanical solidarity** is a form of social cohesion produced through common classifications and sentiments;
- **magnetization** is an alternative picture of durable aligned state, domains, boundaries, and remanence;

- the **multi-mind-self** is a possible collective agent only above the additional integration and continuity threshold.

An S1 is neither necessary nor sufficient for mechanical solidarity, but it can condense, direct, and reproduce it efficiently. In lifted mechanical solidarity, abstract signifiers are especially powerful because many different first-order lives can be coordinated through the same second-order word.

Institutions often claim custody of a master signifier:

```

"Science", "Justice", "Safety", or "Human Rights"
      ↓
institution claims authorized interpretation
      ↓
office or spokesperson applies the classification
      ↓
body of knowledge and recommended action
      ↓
citizen belief update

```

The healthy and pathological uses differ:

HEALTHY

S1 organizes inquiry → method and evidence remain inspectable

PATHOLOGICAL

S1 terminates inquiry → authorization selects admissible evidence
→ a required conclusion follows

No signifier-free mind or society is possible. The goal is not to eliminate organizing terms but to keep them visible, plural, concretizable, and corrigible. The decisive question is whether the signifier helps formulate an inquiry or decides when inquiry must stop.

15. Persuasion and the reconstruction of mental models

Persuasion is a process for changing belief, evaluation, identity, or action. It is not inherently truth-directed or reality-distorting. Its epistemic status depends on the model toward which it moves a person and whether that model remains open to correction.

One useful analogy proposed by this entry distinguishes two communication styles:

- **State transmission** attempts to copy a finished conclusion into another person through claims, arguments, or instructions.
- **Operation transmission** helps the other person reconstruct the path through recalled experiences, questions, comparisons, predictions, and self-generated inferences.

This analogy resembles the difference between copying a state and reproducing the operations that generated it. It is an interpretation inspired by the American writer **David McRaney's** *How Minds Change* (2022), not McRaney's own terminology.

Audience-modelled reconstruction and decompression Dushan Wegner's *Relevante Strukturen* (2019; ISBN 9783739405636) describes language as *Komprimierung* for later *Dekomprimierung*. A finite utterance omits most features of the world and uses symbols that the recipient is expected to expand from representations already available in memory. Wegner also emphasizes that effective writers and speakers anticipate how their words will unfold in the recipient and how much decompression that recipient can perform.

Culture Mechanics adopts this source perspective as the cross-cutting **audience-modelled reconstruction** model:

Audience-modelled reconstruction is the selection and arrangement of facts, omissions, symbols, sequence, presuppositions, and cues in light of an anticipated recipient model, so that the recipient predictably reconstructs a larger factual, causal, social, moral, and authorization model from the finite message.

```

communicator's represented event or world model
      ↓

```

model of the anticipated recipient:
 stored concepts + mythologies + authorities + sentiments + knowledge
 ↓
 selection of facts, omissions, sequence, symbols, and cues
 ↓
 finite message
 ↓
 recipient's main CPU + installed mythological lens + context
 ↓
 reconstructed factual, causal, moral, and authorization model

The message does not carry the reconstructed model in full. It supplies selected material and assembly cues. The same surface message can therefore produce different reconstructions in audiences with different knowledge, mythologies, trusted authorities, or symbolic codebooks.

Compression is unavoidable and is not inherently manipulative. Expertise, teaching, ordinary conversation, law, and coordination all depend upon selective description and shared symbols. The epistemically dangerous subtype is **adversarial audience-modelled reconstruction**:

communication designed or organized so that the anticipated recipient predictably reconstructs a materially misleading model while the surface formulation retains literal, semantic, or rhetorical defensibility.

Misleading reception alone does not prove adversarial intent. The inference grows stronger when decisive omissions recur asymmetrically, the communicator can predict the recipient's inference, different audiences receive strategically different compression, correction is resisted, or literal deniability is used to preserve the same misleading reconstruction.

The corresponding **decompression audit** asks:

Audit field	Question
Surface message	What was explicitly said, shown, or omitted?
Omitted structures and effects	Which actors, relations, costs, alternatives, uncertainties, or time horizons disappeared?
Assumed recipient	Which knowledge, mythologies, authorities, symbols, and sentiments were expected to be available?
Activated codebook	Which terms, images, roles, or master signifiers supplied preloaded meaning?
Predictable reconstruction	What complete factual, causal, moral, and authorization model was a competent intended recipient likely to build?
Actual reconstruction	What did different recipients in fact infer?
Action and authorization consequence	Which conduct, sanction, trust, or grant of power followed?
Alternative decompressions	Which materially plausible reconstructions were excluded, punished, or made difficult to formulate?

This model organizes omission, paltering, framing, presupposition, causal stories, master signifiers, and systemic lying without replacing their more specific definitions. The *lossy codec* and *decoder-targeted compression* expressions are controlled analogies for this model, not claims that human interpretation is literal digital decoding.

Narrative exchange, deep canvassing, motivational interviewing, Street Epistemology, and Socratic questioning may reduce identity threat and help a person perform the relevant operations. The evidence base includes, for example, [Joshua Kalla and David Broockman's three field experiments on non-judgmental narrative exchange in deep canvassing \(2020\)](#). None of these methods is automatically ethical or truth-producing. Questions can simulate open inquiry while selectively steering someone toward a conclusion fixed in advance. This entry calls that possibility **Socratic manipulation**; it is a critical label, not the historical Socratic method's own name.

Method and target must therefore be evaluated separately:

Epistemic direction	Relatively autonomy-supporting method	Manipulative or coercive method
Toward a better reality-tracking model	Education, reciprocal inquiry, transparent persuasion	Reality-aligned paternalism; potentially justified only under sufficiently grave and well-supported conditions
Toward a false or misleading model	Polite or Socratic misdirection	Propaganda, fraud, indoctrination, and epistemically corrupt manipulation

The method alone does not determine the truth of the result. Conversely, the persuader's conviction that the intended conclusion is true does not make every method legitimate. Truth-directed inquiry requires that the persuader's own model also remain at risk.

The programming topology in Section 12 changes neither verdict. It can make an accurate lesson or a false causal story more transportable, authoritative, and socially reinforced. Ethical and epistemic judgment therefore cannot be inferred from receptivity, participation, gentleness, authority, or resistance alone; the content's relation to reality and the preservation of corrigibility remain separate tests.

16. Causal stories and political agenda formation

A **causal story** organizes a condition into a politically meaningful sequence:

```

condition
  ↓
actionable problem
  ↓
cause and responsible agent
  ↓
victim, culprit, and legitimate fixer
  ↓
preferred remedy
  ↓
coalition, agenda, and coordinated action

```

The American political scientist **Deborah A. Stone** develops this concept in "[Causal Stories and the Formation of Policy Agendas](#)" (1989) (DOI). Her analysis explains how political actors compete to define causation, assign responsibility, convert difficulties into governable problems, and attach proposed solutions to issues on the agenda. A causal story does more than summarize facts. It defines moral roles, distributes sympathy and blame, identifies who may intervene, and makes some remedies appear natural while rendering others invisible.

Authorization payload

Wegner's maxim and the Culture Mechanics translation On the official page for [Talking Points](#), Dushan Wegner states the originating political-language maxim without qualification:

Der erste Zweck politischer Sprache ist es, das Volk zu motivieren, dem Politiker das eigene Leben anzuvertrauen. Die goldene Regel aller politischen Kommunikation lautet: Rede jederzeit so, dass die Menschen motiviert sind, dir Macht über ihr Leben zu geben!

A close English rendering is:

The first purpose of political language is to motivate the people to entrust their own lives to the politician. The golden rule of all political communication is: always speak so that people are motivated to give you power over their lives.

The page characterizes **talking points** as formulations capable of moving people to follow, believe, and trust, while also directing hatred, fear, or combat toward opponents. It says that the described effects attach directly to human psychology and presents *Talking Points* as a complement to *Relevante Strukturen*. The two sources can therefore be joined without pretending that the maxim appears in the later book:

Relevante Strukturen:

which structures matter, and what appears to support or damage them?

↓

Talking Points:

which formulations make the speaker a trusted protector

and the opponent an object of fear, hostility, or resistance?

↓

political consequence:

what authority, obedience, resources, or restrictions follow?

The Culture Mechanics translation is:

Political language is an authorization bid: it seeks to convert moral concern into delegated jurisdiction.

This is a functional diagnostic, not a claim that every political utterance has only one purpose or that requesting authority is inherently deceptive. An authorization bid can range from a request for attention, trust, a vote, money, or ordinary obedience to a request for discretionary power, emergency authority, institutional access, sacrifice, silence, or restrictions on opponents. Its moral and epistemic quality depends upon truth, proportionality, declared scope, jurisdiction, oversight, revocability, consequence, and corrigibility.

A causal story can carry more than a preferred interpretation or remedy. By identifying a threatened structure, culprit, victim, guardian, and legitimate fixer, it can make a transfer of power appear necessary. The **authorization payload** is the grant of authority that acceptance of the causal and moral model is expected to support:

represented problem and threatened structure

↓

victim + culprit + protector or legitimate fixer

↓

preferred remedy

↓

requested authorization:

power + objects + jurisdiction + duration + discretion

The authorization-payload audit asks:

Field	Question
Power requested	What may the actor now decide, compel, prohibit, spend, inspect, or conceal?
Objects	Over whom or what may that power be exercised?
Jurisdiction	Within which domain, and where does the claimed mandate stop?
Duration and discretion	For how long, under which rules, and with how much latitude?
Oversight	Who can inspect reasons, evidence, execution, and consequences?
Revocability and succession	Who can withdraw, transfer, or replace the mandate?
Termination evidence	Which observations, outcomes, or changed conditions end it?
Opponent restrictions	Which rights, standing, speech, property, or participation may opponents lose?
Epistemic spillover	Does coordination authority become authority to determine what counts as true or relevant?

Political and institutional coordination necessarily requires legitimate authorization. The presence of a payload is therefore not evidence of deception or pathology. The danger appears when its scope is hidden, temporary coordination becomes indefinite jurisdiction, revocation or succession is blocked, opponents lose standing without due process, or trust in the protector becomes epistemic sovereignty.

The term **authorization payload** and the authorization-bid translation are project-developed. Wegner's *Talking Points* page supplies the forceful source maxim about winning trust and power over people's lives. His "Ethics is a weapon" discussion and *Vierschritt der Kontrolle* in *Relevante Strukturen* supply the neighbouring account of moral

persuasion through represented support and damage to relevant structures. Neither the typed payload nor its audit should be attributed to Wegner as his own formal construct.

In culture-mechanical terms, causal stories can **program the distributed bigOther**. Repeated stories train local mythological lenses to classify events, agents, institutions, and responses in similar ways; common reception makes those classifications mutually visible; and repetition stabilizes them as field expectations. An authorized institution can then activate this installed structure with a compressed master signifier. Stone explains political causal construction; the field-programming translation belongs to this framework.

Not every causal story is a distortion. Complex events require selection and structure; some stories reveal preventable human causes previously treated as fate or accident. The pathological subtype is **bad-faith causal-story construction**:

selective problem definition and causal attribution used to attach a preselected policy to a real condition while concealing alternative causes, remedies, trade-offs, or predictable consequences.

A causal story may use only individually true statements and still install a false overall model. Reality-tracking therefore requires comparison among causal structures, attention to omitted variables and alternative remedies, and evaluation of predictions beyond the persuasive setting in which the story was first told.

17. The complete capture sequence

The concepts can be assembled into one possible pathway without claiming that every case follows every step. The sequence must distinguish two operations. An authority can activate, reinforce, or extend material already installed or compatible with the incumbent lens. Capture by an incompatible governing worldview is different: under the single-slot principle, it cannot add a second evaluator and must first loosen and unbraided the incumbent sufficiently for one successor weave to be rebraided and installed.

Here **complete capture sequence** names an incompatible, potentially pathological route into authority-gated judgment. It is not the definition of **full capture** in the neutral architectural sense of complete slot occupancy. First-order and lifted programs can both occupy the slot fully, and either can be open or closed. The sequence becomes pathological where correction is disabled, interpretation is monopolized, or an authority claims epistemic sovereignty over reality.

UNCERTAINTY, DEPENDENCE, OR DISORIENTATION

the person needs a classification or cannot investigate alone

↓

MASTER SIGNIFIER OR CAUSAL STORY OFFERS ORDER

a compact term or narrative defines what events mean

↓

PRIVILEGED PROGRAMMING TOPOLOGY AMPLIFIES RECEPTION

authority, common attention, narrative, and common knowledge converge

↓

THE INCUMBENT LENS CLASSIFIES THE OFFER

compatible material may be activated, reinforced, or integrated;

an incompatible governing offer is rejected unless replacement advances

↓

INCOMPATIBLE CAPTURE LOOSENS AND UNBRAIDS THE INCUMBENT

authorities, meanings, loyalties, sentiments, and defences are detached;

liminal instability and dependency make a successor increasingly receivable

↓

ONE SUCCESSOR WEAVE IS REBRAIDED AND INSTALLED

retained and new strands acquire meaning within one operative lens;

no parallel bigOther or higher runtime ranking is introduced

↓

S1 ORGANIZES S2

some knowledge, experts, and institutions become legitimate;

others become disreputable or invisible

↓

MECHANICAL-SOLIDARITY FIELD FORMS OR STRENGTHENS

local bigOthers display, observe, and reinforce common classifications

↓

FIELD BACK-ACTION

apparent consensus, sanctions, and bigOther-presence change what feels admissible

SOCIALIZATION INTO INSTITUTIONAL TRUST

offices, credentials, and channels become shared trust anchors

IDENTITY AND BELONGING BECOME INVESTED

questioning the classification threatens moral standing and membership

AUTHORITY-GATED BELIEF UPDATING

authorization begins to replace symmetrical evaluation

ASYMMETRIC EPISTEMIC PERMEABILITY

in-group messages penetrate; outside evidence is resisted

MOTIVATED REASONING, DUMMHEIT, OR NORMOPATHIC ADAPTATION

intelligence defends the installed order and members enforce it mutually

The unbraiding and rebraiding stages apply only when the incoming program is incompatible at load-bearing classifications. In compatible socialization or reinforcement, the sequence can move directly from incumbent classification to S1 organization without worldview replacement. In failed or incomplete replacement, contradictory remnants can leave one tangled, unstable lens; they do not establish several independently operative bigOthers.

The sequence is recursive. Public conformity strengthens the appearance of consensus; apparent consensus strengthens individual deference; deference strengthens institutions able to control the stories, symbols, sanctions, and sources through which the next round of socialization occurs.

No conscious conspiracy is necessary. The loop may arise through ordinary coordination, institutional inertia, sincere belief, career incentives, dependency, and mutual prediction. It can nevertheless be deliberately exploited by actors who understand how to manipulate narratives, identities, prestige, fear, and institutional legitimacy.

Cognitive relief as one pathway into capture Wegner preserves his grandmother's compact judgment, *Denken tut weh*—"thinking hurts"—and proposes that simple thoughts can feel good because they spare effort. Her formulation is a situated witness judgment, not a calibrated prevalence estimate. Culture Mechanics translates it into the **cognitive-relief hypothesis**:

Under complexity, contradiction, uncertainty, public exposure, or responsibility for independent judgment, an authority-endorsed compressed formula can gain an adoption advantage partly because accepting it reduces experienced cognitive and social burden.

complexity + contradiction + uncertainty

+ public exposure or responsibility for judgment

aversive demand for independent analysis

authority supplies compressed causal and moral formula:

structure + threat + culprit + protector + required action

uncertainty and experienced personal responsibility decrease

subjective relief + belonging + moral certainty

checking and decompression become less attractive

formula, authority, and field reinforce one another

This is one possible pathway into Bonhoefferian *Dummheit*, authority-gated updating, or normopathic adaptation; it is not their definition and does not imply low intelligence or a fixed aversion to thought. Compression can also be truthful, educational, and necessary. The pathological transition occurs when relief is purchased by hiding uncertainty, disabling inexpensive checks, making decompression shameful, or converting an authority's summary into reality-permission.

The hypothesis predicts that cognitive load, time pressure, public visibility, and authority endorsement will increase

preference for compressed explanations and reduce checking partly through measurable subjective relief. Failure of relief to mediate that relationship, or absence of a compression advantage under those conditions, would weaken this proposed pathway.

Several labels in the final stage come from separate literatures and are not synonyms. **Motivated reasoning** refers to the directional recruitment of reasoning analyzed by the social psychologist **Ziva Kunda** in “[The Case for Motivated Reasoning](#)” (1990). **Contaminated mindware** is the psychologist **Keith E. Stanovich’s** term for acquired reasoning rules or beliefs that can impair rationality; see the chapter “[Contaminated Mindware](#)” (2009). **Need for cognitive closure** is the construct measured by social psychologists **Donna M. Webster and Arie W. Kruglanski** in “[Individual Differences in Need for Cognitive Closure](#)” (1994). **Normopathic adaptation** is used here descriptively for overadaptation to a pathological normality. It borrows from a concept with several partly independent histories, including **Erich Wulff’s** *Psychiatrie und Klassengesellschaft* (1972), **Joyce McDougall’s** psychoanalytic work on normopathy, and **Hans-Joachim Maaz’s** society-level application in *Das falsche Leben* (2017). The present use does not import any one of their clinical or political theories wholesale.

18. Healthy and unhealthy mechanical solidarity

Mechanical solidarity is not inherently an enemy of epistemic agency. A society can make reality-orientation itself an object of shared honour.

An **agency-supporting mechanical solidarity** teaches that:

- persons retain dignity when they are mistaken;
- factual disagreement is not automatically disloyalty;
- authorities must expose methods and correct errors;
- domain expertise matters, but jurisdiction has boundaries;
- uncertainty may be acknowledged without shame;
- elementary checking is responsible rather than insulting;
- independent institutions and source pluralism are public goods;
- publicly changing one’s mind can be honourable;
- no institution is the final authorized voice of reality.

An **agency-suppressing mechanical solidarity** teaches that:

- loyalty and factual agreement are fused;
- one identity or institution possesses privileged access to truth;
- unauthorized evidence is morally contaminated;
- the same claim receives different standards according to its source;
- uncertainty signals weakness or betrayal;
- correction threatens status and belonging;
- a missing conformity signal or continued association with a dissenter discloses bad character;
- dissenters may be ignored, shamed, excluded, or punished;
- authorities certify themselves and define their own failures away.

The distinction is not between culture and no culture, full and partial occupancy, or universal and merely local authority. Both configurations can be first-order or lifted full captures. An agency-supporting lifted meta-order remains universally binding at the second order while requiring every representative to remain corrigible and within its allocated jurisdiction. An agency-suppressing order grants final epistemic sovereignty to its representatives, disables correction, or allows jurisdictional spillover.

Both configurations can also sustain a multi-mind-self and unitary collective ownership. Integration is not goodness. A healthy collective agent can maintain knowledge, infrastructure, and common goods across generations; an unhealthy one can own, remember, and act with equal coherence while suppressing correction or harming outsiders. Field strength and epistemic quality must therefore be judged separately.

19. Piety toward the real

Piety toward the real is the normative pole of the framework. The phrase comes from the American sociologist **Robert N. Bellah’s** introduction to *Émile Durkheim on Morality and Society* (1973); it is Bellah’s characterization of Durkheim’s attitude, not a standard technical term coined by Durkheim. This entry adopts and extends Bellah’s phrase to name a disciplined respect for the complexity and resistance of what exists.

Piety toward the real means that:

- reality is not exhausted by one's present concepts;
- social facts and institutions may have functions not visible to unaided intuition;
- reform should begin by investigating the structure actually present;
- a satisfying narrative is not sufficient evidence;
- prediction, surprise, error, and consequences may defeat a preferred model;
- no person, movement, or institution may define reality solely by authorization;
- one's own certainty remains fallible and must be externally corrigible.

This piety must be paired with **moral individualism**, drawing on Durkheim's defense of the morally sacred person in "[L'individualisme et les intellectuels](#)" (1898): the unconditional dignity of persons does not depend on whether their current claims are correct. The present ethical formula is an extension, not a quotation from Durkheim. Respect for a person does not require treating every belief as equally sound. Nor does respectful attention to existing social facts sanctify existing institutions. An institution may be real, complex, and functionally important while remaining unjust or mistaken. The resulting rule is:

Respect persons unconditionally; evaluate propositions conditionally according to evidence; regulate actions according to justice.

This orientation is compatible with the holistic structural realism described in [Holistic Epistemology and Metaphysics: Structural Realism](#). The basic epistemic control loop is:

```

experience
↓
concepts and operations
↓
model or "digital twin"
↓
prediction and intervention
↓
encounter with reality
↓
surprise, error, and out-of-sample consequence
↓
revision of the model, concepts, or operations

```

The central virtue is not solitary knowledge. It is preservation of a route by which reality can say **no**.

Piety toward the real also guards against self-appointed gatekeeping. Personal conviction is not self-authenticating. A person who intervenes "for the truth" must remain answerable to evidence, relevant competence, independent assessment, proportionality, consequences, and correction. The compact ethical rule proposed by this synthesis is:

Let truth identify the danger, let love require a response, and let epistemic humility govern the means.

20. Cognitive liberty and epistemic adulthood

In its established legal and ethical lineage, **cognitive liberty** concerns mental self-determination and freedom from unwanted interference with thought or consciousness. Important formulations include **Richard Glen Boire's** essay series "[On Cognitive Liberty](#)" (1999–2003) and the German legal scholar **Jan Christoph Bublitz's** "[My Mind Is Mine!? Cognitive Liberty as a Legal Concept](#)" (2013). The specialized usage developed here explicitly extends that lineage by adding a positive developmental capacity:

Cognitive liberty is the acquired capacity to gain reflective distance from one's socialization, including the mechanical-solidarity structures that formed one's identity, trust relationships, and standards of truth, without thereby becoming incapable of social trust or collective participation.

The corresponding developmental process is **epistemic adulthood**. Biological or legal adulthood does not guarantee it. A person can reason competently within an inherited trust system while remaining unable to inspect that system as a system.

The developmental movement can be represented as:

SOCIALLY AUTHORED TRUST

"I know through the authorities recognized by my group."

↓

SELF-AUTHORED TRUST

"I can examine why, where, and under what conditions I trust them."

SELF-TRANSFORMING TRUST

"I can revise even my standards of authority and my trust architecture."

This developmental representation is adapted from the American psychologist **Robert Kegan's** constructive-developmental theory, especially the subject-object relation and the movement from socially authored toward self-authored and self-transforming meaning-making discussed in [In Over Our Heads](#) and related work. Kegan does not use the terms *epistemic adulthood*, *socially authored trust*, or *self-transforming trust* in the exact senses defined here. What remains *subject* to the person organizes perception but cannot yet be inspected. What becomes *object* can be noticed, compared, endorsed, limited, or revised.

Epistemic adulthood therefore means that inherited institutional trust becomes:

- conscious rather than invisible;
- allocated to particular persons and institutions within their domains rather than allowed to become total;
- calibrated rather than sacred;
- defeasible rather than preemptive;
- plural rather than monopolistic;
- answerable to reality rather than self-certifying.

It does not guarantee correct beliefs, benevolence, or greater intelligence. A self-authored person can construct a false or cruel worldview. Developmental capacity and epistemic content must be judged separately. The mature achievement is **reflective ownership without finalization**.

Reflective plurality occurs in the main processor: a person can represent, compare, and learn from several authorities or worldviews without installing one local bigOther for each. Until reconstruction occurs, one local bigOther executes one operative lens. Epistemic adulthood enlarges the person's capacity to inspect, repair, compatibly extend, unbraid, or replace that lens; it is not a higher identity that ranks parallel evaluators.

This development occurs inside a fully installed program. Epistemic adulthood is the main processor's acquired capacity to inspect and revise its trust architecture within full lifted capture; it is not absence of programming, absence of universal meta-authority, or reduced occupancy of the single slot.

21. Truth, love of neighbour, and intervention

The framework treats cognitive liberty as important but not absolute. Non-interference can become abandonment when illness, coercion, addiction, delusion, or another destructive process is eliminating the capacities required for future agency.

The moral vocabulary proposed here combines:

- **truth**, which concerns whether the understanding of danger and benefit tracks reality;
- **Nächstenliebe** or love of neighbour, which requires concern for the concrete person's good rather than indifference or instrumental use;
- **corrigibility**, which recognizes that the would-be helper is fallible and may also be captured by a master signifier.

This yields an important distinction:

- **Epistemic intervention** addresses false belief through evidence, demonstration, questioning, and dialogue. False belief by itself does not normally authorize coercive control of another person's mind.
- **Protective intervention** responds to grave and imminent danger that may destroy life or future agency. Stronger interference can sometimes be justified, but should be proportionate, accountable, and directed toward restoring self-direction.

Example—anorexia nervosa (*Magersucht*). A person may sincerely experience extreme restriction and weight loss as discipline, achievement, beauty, or personal control even while starvation is making them gravely ill. Simply admiring their determination and watching them die would confuse respect for present choice with love of the concrete neighbour. Because anorexia nervosa can endanger life, truth-directed love can require active intervention to preserve both the person and the possibility of future agency. Intervention should begin with honest communication and specialist, multidisciplinary support. Where physical health is at serious risk and treatment is refused, protective treatment against the person's present wishes can sometimes be justified—but only through an appropriate legal

framework, by a competent team, and as a last resort; these safeguards are also reflected in [NICE's clinical guidance on eating disorders](#).

The governing principle is not “If I am convinced, I may impose the truth.” Truth is the judge, but no individual is identical with truth. Strong intervention requires correspondingly strong and corrigible grounds.

Love also governs method. The neighbour is not material to be reprogrammed. Even justified intervention should prefer explanation before deception, accompaniment before coercion, proportionate means, preservation of dignity, and restoration of independent judgment.

22. Epistemic emancipation and MCIP

Epistemic emancipation is lifting. It is the practical process by which a full first-order capture is unbraided at the point where inherited concrete answers are treated as final and rebraided as a full lifted capture. Testimony, authorities, institutions, and first-order beliefs need not disappear. Religious, professional, familial, political, and local material may remain as compatible strands, inputs, or current outputs, but its authority is now determined by the installed answer-generating rules.

The successor weave binds people to a generator: rules for deciding who may make a rule, what evidence an answer must survive, how a general rule applies to a case, who may challenge the result, and how an error is revised. This is still complete capture. The lifted order may govern universally at its own level while generating different first-order answers and bounded jurisdictions for people, offices, professions, institutions, communities, and contracting parties. Corrigibility is a separate axis: a lifted generator remains open only while its rules and authorized outputs remain answerable to reality and to its own correction procedures.

FULL FIRST-ORDER CAPTURE

shared concrete rules and answers are binding as such

↓

UNBRAID THE FINALITY OF THOSE CONCRETE ANSWERS

↓

REBRAID A SHARED GENERATOR

fixed M + current K_t + situation C

↓

FULL LIFTED CAPTURE

the shared generator produces binding R_t(C), including changing answers and, where relevant, bounded first-order jurisdictions

Emancipation therefore does not install a second bigOther, empty the slot, or weaken its occupancy. Counter-relations, plural institutions, reality contact, and practical support help the main processor inspect the one installed weave, protect or repair sound bindings, unbraid false or overreaching ones, and make a reality-responsive reconstruction survivable. A rival successor is not pathological merely because it replaces the incumbent. It becomes a failed emancipation when it is closed or uncorrectable, monopolizes interpretation, exceeds its constituted jurisdiction, or turns lifted terms into inquiry-terminating master signifiers.

The person is usually bound by more than a false proposition. The binding structure can include:

- collective identity and belonging;
- master signifiers and sacred values;
- trusted institutions and authorized channels;
- rituals of mutual confirmation;
- fear of uncertainty;
- shame or sanctions attached to doubt;
- material, relational, or professional dependence;
- lack of an alternative community in which reconsideration is survivable.

For this reason, fact correction alone often fails. It attacks one output while leaving the trust architecture, social reinforcement, and identity investment intact.

MCIP—Mirror → Cut → Invite → Promise—is a proposed conversational method for making difficult truths psychologically digestible while returning epistemic authorship. It is a new synthetic mnemonic, not an established method under that name. Its elements have family resemblances to **Carl Rogers and Richard Farson's active listening**, **William R. Miller and Stephen Rollnick's motivational interviewing**, **J. L. Austin's** account of [speech acts and promises](#), and

Lacanian uses of the *cut*. MCIP is not presented by any of those authors, and its four steps should not be treated as an authorized restatement of their methods.

1. **Mirror:** Recognize the person's felt reality, value, fear, concern, or legitimate grievance without automatically affirming the associated factual claim.
2. **Cut:** Introduce one precise discrepancy, contradiction, failed prediction, hidden assumption, or concrete reality check. Cut the protected connection, not the person's dignity.
3. **Invite:** Ask the person to perform the next epistemic operation: formulate the claim, identify a counterexample, make a prediction, compare sources, calculate, or state what could change their confidence.
4. **Promise:** Anchor the opening in a small verification step, shared commitment, practical support, or relationship that makes continued inquiry possible.

The sequence is:

Mirror lowers identity threat

↓

Cut interrupts the protected narrative or automatic S1 → S2 sequence

↓

Invite returns authorship and leaves the uncertainty gap open

↓

Promise turns reflection into action and makes independence survivable

At large scale, MCIP would need to be a **fractal social practice**, not one broadcast designed to convert a population. Many relationships, communities, media encounters, and institutions would have to create protected doubts, precise reality contacts, opportunities for personal verification, and credible alternatives to abandonment.

Its population-level function would be controlled **de-synchronization**:

- Mirror separates members' dignity and legitimate experience from the authority's interpretation.
- Cut interrupts the institution's monopoly on meaning with a concrete failure or discrepancy.
- Invite creates protected spaces for uncertainty, investigation, dissent, and plural expertise.
- Promise supplies the relationships and material conditions required to question without losing one's whole world.

The danger is that large-scale "liberation" becomes **closed or uncorrectable successor culture mechanics**. Replacement culture mechanics is unavoidable under single-slot exclusivity; pathological closure is not. Mirror can become calculated identification, Cut can become destabilization, Invite can become guided discovery toward a fixed doctrine, and Promise can become initiation into a new mechanically solidary group. MCIP is agency-supporting only when its Cut is reality-answerable, its Invite is genuinely open, and the persuader's own model remains corrigible.

23. Safeguards for persons, institutions, and cultures

No safeguard abolishes dependence or error. The objective is to preserve multiple routes of correction.

Personal safeguards

- **Cheap-check rule:** When a decisive source, count, observation, or elementary calculation is readily available, perform it before delegating the question.
- **Authorization–evidence distinction:** Ask whether confidence comes from the evidence, the institutional signature, or both.
- **Prediction record:** State what the model expects before the outcome is known.
- **Defeater question:** Ask what observation would reduce confidence or change the conclusion.
- **Source-chain audit:** Determine whether apparently independent authorities ultimately rely on one source.
- **Domain check:** Ask whether the trusted person's competence actually covers the present claim.
- **Symmetry check:** Consider whether identical evidence would be judged differently under rival branding.
- **Gap tolerance:** Practice leaving uncertainty unresolved rather than filling it immediately with an authorized S1.

Institutional safeguards These bounded jurisdictions are constituted by universally binding lifted rules; their plurality does not localize the meta-order that makes their limits, interaction, appeal, and correction authoritative.

- explicit jurisdiction and domain limits;
- transparent evidence, methods, uncertainty, financial and nonfinancial relationships, and participation in selecting or constructing the message;

- traceable provenance from the originating objective, evidence, or content through each selection, translation, and local implementation;
- visible correction and retraction procedures;
- institutional separation and genuinely independent review;
- review of whether apparently plural authorities depend upon one sponsor, evidence package, platform, appointment network, or communication source;
- protection for internal dissent and whistleblowing;
- access to data and methods where safety and privacy permit;
- public records of predictions, failures, and learning;
- correction propagation through the same cascade that carried the original claim;
- succession rules that make a trusted person or office replaceable without epistemic collapse;
- distinction between coordinating action and certifying factual truth.

Cultural safeguards

- dignity of persons independent of their current correctness;
- public honour for correction and principled dissent;
- moral permission to ask elementary questions;
- plural external affiliations and practical rights of exit that make inspection, defence, repair, or reality-responsive reconstruction of the one installed weave survivable;
- resistance to a single institution becoming the exclusive voice of the distributed bigOther;
- refusal to mistake a counterfield or rival institution for a second local bigOther: it can support or contest the installed lens, not co-occupy its PCI slot;
- shared commitment to justice, tolerance, human rights, jurisdiction, and correction as a universally binding open meta-program rather than an excuse to terminate inquiry;
- piety toward the real as the final norm of model correction.

An agency-supporting culture does not teach people to trust nobody. It teaches them **how to trust without surrendering the possibility of correction.**

24. Diagnostic questions

The following questions help identify the configuration without assuming in advance that dependence is pathological:

1. Who or what is recognized as entitled to certify reality in this domain?
2. Is that authority personal, role-based, institutional, professional, distributed, or symbolic?
3. What originally established the authority's trust, and does its current record sustain it?
4. Does the authority expose evidence and method, or primarily display authorization?
5. What would count as a defeater, and who is permitted to present one?
6. Are apparently plural sources genuinely independent?
7. Is authority limited to its proper domain, or has it spilled into coordination, morality, identity, and total interpretation?
8. Would the same evidence receive the same weight under different institutional branding?
9. Are inexpensive direct checks welcomed, ignored, or socially punished?
10. Does disagreement produce curiosity, or shame, fear, exclusion, and accusations of disloyalty?
11. Can the institution acknowledge error without losing its identity and legitimacy?
12. Can the person doubt or exit without losing every source of belonging and support?
13. Does a master signifier organize a concrete inquiry or terminate it?
14. Which causal story assigns blame, victimhood, responsibility, and remedy, and what alternatives has it hidden?
15. Does the resulting model make risky predictions that reality can prove wrong?
16. Which signals are local outputs, which belong to the shared symbolic protocol, and which patterns exist only at field level?
17. Is the audience arranged in a privileged authority-addressed topology, and would the same message have the same effect through a peer channel?
18. Do participants merely hear the same message, or do they know that others hear it and observe one another's response?
19. Does a putative multi-mind-self preserve memory, judgment, intention, and care through turnover, or does apparent unity disappear with one leader?
20. Is "shared ownership" only legal title or incentive alignment, or does one continuing collective perspective organize perception and action?

21. Does shared binding force reside in concrete rules and answers or in the rules that generate, select, apply, and revise them, and does that first-order or lifted weave fully occupy the single slot?
22. Does a universal lifted rule allocate and limit the authority at issue, or has a person, office, profession, institution, or community exceeded that allocated jurisdiction?
23. Can the meta-order and its authorized interpreters be corrected and succeeded, or do they claim that their certification determines what reality may be?
24. If a person functions as a trusted opinion leader, what is their profile— transmission gain, authority bases, routing functions, jurisdiction, independence, and corrigibility?
25. Was the leader or other authority carrier recognized by the receiving field, formally appointed, externally amplified, deliberately cultivated, algorithmically elevated, or some hybrid?
26. How did the claim change as it moved from source to expert interpretation, recommendation, local shorthand, visible adoption, and institutional rule?
27. Do several trusted speakers represent independent convergence or one source repeated through multiple authenticated faces?
28. Can a correction travel back through every level of the cascade with enough visibility to repair the original field effect?
29. When two inherited authorities conflict over the same act, which one has final interpretive priority, or does a third rule govern both?
30. Are apparently dual commitments both independently affectively alive and final, or is one camouflage, retained material, contextual output, or an incompletely replaced remainder?
31. In a putative blood-feud system, who owns the injury, selects an eligible retaliator and target, receives compensation, remembers the debt, and may end it?
32. Does substitution among kin express one continuing corporate subject, or can deterrence, reputation, coalition incentives, honour norms, and weak public adjudication explain the pattern without collective agency?
33. What complete model was the intended recipient expected to reconstruct from the message, which codebook and omissions made that reconstruction likely, and what did different recipients actually infer?
34. What authorization payload follows from the causal story—which power over whom, in which jurisdiction, for how long, under what oversight, and subject to which termination evidence?
35. Did accepting an authority-endorsed formula provide measurable relief from uncertainty, public exposure, or responsibility, and did that relief reduce checking or decompression?

No single answer is decisive. The pattern matters.

25. Examples, cases, and boundary tests

This section is the example home for the first-order/lifted distinction across the theory family. The cases do not prove the framework. They make its classifications risky enough to criticize and test.

The diagnostic in concrete terms The two architectures can govern exactly the same subject:

FIRST-ORDER

the community shares R1, R2, R3 ... as the proper concrete answers

LIFTED

the community shares M as the proper way to produce an answer

$M + \text{current } K_t + \text{situation } C \rightarrow \text{binding } R_t(C)$

The first question is therefore not “How abstract does the vocabulary sound?” or “How many rules are written down?” It is: **What must members share in order to recognize one another as properly formed—the concrete answer, or the generator that can produce and revise answers?**

Rule density nevertheless matters as evidence. Especially vivid first-order signatures include:

- detailed rules governing which foods may be eaten, by whom, when, and after which preparation;
- fixed rules for sex, menstruation, childbirth, corpses, bodily fluids, washing, and restoration after contact;
- prescribed clothing, hairstyles, greetings, seating orders, and forms of address for each status;
- fixed calendars of fasting, feasting, rest, mourning, and ritual observance;
- hereditary rules determining occupation, marriage eligibility, residence, and family duties; and
- craft rules prescribing the proper material, tool, gesture, and sequence rather than a result to be demonstrated.

Religions and cultures organized around many such rules are often first-order, especially when a *beseelte* person follows them without external enforcement because they feel intrinsically clean, decent, honourable, or human. That proposed association is a falsifiable hypothesis; it is not a measured correlation coefficient. Conversely, a legal or scientific corpus can be enormous while solidarity remains lifted if the common binding rule is the rule that generates and corrects its current contents.

Central case: bodily regulation and scientific hygiene Calling one side “purity” and the other “hygiene” would miss the mechanism. Both are rulesets governing bodies, substances, contact, and cleaning. They differ in where the fixed binding rule resides.

Several religious orders make the concrete answer itself morally binding. The [Qur’an’s ablution instruction](#), for example, specifies washing the face and forearms, wiping the head, washing the feet, and a clean-earth alternative under stated conditions. [Mishnah Shabbat 7:2](#) enumerates thirty-nine primary categories of prohibited Sabbath labour, while an [Orthodox Union explanation](#) shows how concrete derivative rules are applied; the same organization’s account of *niddah* describes menstrual separation, examination, clean days, and immersion. These are not merely private hygiene preferences. They classify proper conduct and membership through concrete answers.

The anthropological case is equally direct. [Richard Shweder, Manamohan Mahapatra, and Joan Miller’s cross-cultural study of moral development in orthodox Hindu Bhubaneswar](#) examined Brahman and so-called “Untouchable” children and adults alongside a Hyde Park comparison group. [Jonathan Haidt’s 1992 dissertation](#) summarizes how food, sex-role, and clothing violations in the Bhubaneswar material were treated as universal moral obligations rather than mere conventions. The present theory classifies that studied Brahmanical milieu as predominantly first-order mechanical solidarity: numerous concrete rules and answers carried the shared moral force.

Scientific hygiene uses the same subject matter with a different architecture. Its fixed rule is roughly: identify a causal hazard using the best available evidence, test which intervention changes transmission or harm, apply the result to the present situation, and revise it when the evidence changes. The output is not fixed in advance. Current [WHO hand-hygiene guidance](#) recommends cleaning both hands with plain soap and water at specified moments and permits sufficiently concentrated alcohol rub under particular conditions. WHO treats [menstruation as a natural bodily process requiring health, water, sanitation, and freedom from stigma](#), and explains that [dead bodies after natural disasters generally do not cause epidemics](#), while identifying specific infectious-disease, water-contamination, and handler risks. The concrete precautions differ because the same evidence-generating rule is being applied to different causal conditions.

The contrast can therefore be stated without changing labels:

First-order bodily regulation shares the concrete answer: this contact, hand, substance, interval, or washing sequence is proper. Lifted scientific hygiene shares the generator: determine the actual hazard and let current evidence select the precaution.

Whole traditions as testable classifications The framework need not retreat from classifying an entire religion or communal tradition. It must, however, specify the historical and institutional object and say what would falsify the classification.

Scoped project hypothesis	Observable reason for the classification	What would weaken or reverse it
Orthodox Judaism is predominantly first-order mechanical solidarity.	Everyday religious formation shares a large corpus of concrete answers about Sabbath conduct, food, bodily states, time, and communal practice.	Evidence that ordinary solidarity primarily binds adherents to an answer-generating procedure whose concrete outputs are expected to change with new inputs.
Classical, fiqh-centred Islam is predominantly first-order mechanical solidarity.	Revealed and juristic prescriptions govern concrete acts such as ablution , fasting , food , and inheritance as religiously proper answers.	Evidence that the tradition’s ordinary shared binding force lies principally in a revisable generator rather than in those substantive answers.
The Brahmanical Hindu milieu studied in Bhubaneswar was predominantly first-order.	Food, bodily, clothing, sex-role, and status rules were treated as objective moral obligations.	Reanalysis showing that participants shared a rule-generating method while accepting materially different outputs as equally proper.

Scoped project hypothesis	Observable reason for the classification	What would weaken or reverse it
Old Order Amish Christianity is predominantly first-order.	The Young Center’s account of the <i>Ordnung</i> describes district-specific, often unwritten rules governing dress, technology, education, leisure, transport, and discipline, embodied through baptismal commitment and everyday practice.	Evidence that communal recognition normally attaches to a common generator rather than conformity to the district’s current concrete <i>Ordnung</i> .
Pauline Christianity contains a decisive lifted transition.	Romans 14 permits different answers about food and days while making faithfulness, conscience, peace, and the effect on the neighbour governing considerations; 1 Corinthians 8 similarly subjects liberty about food to its effect on another.	Evidence that the apparently generative considerations merely conceal one fixed set of concrete answers, or cannot authorize divergent outputs in practice.
Quaker Christianity is predominantly lifted in its collective decision architecture.	Quaker Faith & Practice makes disciplined discernment and the revisable “sense of the meeting,” recorded by the clerk amid differing convictions, the binding procedure rather than voting on a predetermined answer.	Evidence that the procedure cannot generate genuinely different answers or that conformity to a fixed substantive catalogue supplies the real communal bond.

These are classifications proposed by culture mechanics, not conclusions asserted by the cited traditions or already established by one observation. “Predominantly” allows mixed subsystems without making the hypothesis immune to failure. The Amish case is a useful hard test: an *Ordnung* can be updated as technologies and local issues arise without thereby becoming lifted. The decisive question is whether members are bound together chiefly by the updating generator or by the concrete *Ordnung* it currently produces.

Rabbinic Judaism supplies the inverse hard case. A religion classified as predominantly first-order can contain a lifted subsystem. The “oven of Akhnai” discussion in [Bava Metzia 59b](#) locates a legal decision in an authorized human process of textual argument and majority decision rather than in a heavenly intervention. That decision procedure can generate a concrete ruling not fixed by the immediate facts alone. Its presence does not automatically determine where the wider religion’s ordinary mechanical solidarity resides.

Further concrete lifted generators Lifted rules are not vague lists of admirable nouns. They are procedures that can be followed and can return a result:

Domain	Fixed generator	Changing first-order output
Political succession	The Catholic Church’s conclave constitution , as amended in 2013 , fixes electors, scrutiny, required majority, secrecy, and acceptance rules.	Which eligible person becomes pope cannot be listed in advance; the procedure generates the officeholder. Its procedural detail shows why “many rules” is evidence, not a definition, of first-order solidarity.
Contracts	German Civil Code §535 supplies the legal form of a tenancy and makes the parties’ agreement legally productive.	The premises, rent, duration, and resulting duties differ with the contract’s inputs while being recognized through the same legal generator.
Markets	The EUPHEMIA day-ahead market-coupling algorithm applies common optimization and constraint rules to submitted orders.	Market-clearing prices and allocations are generated anew for each bidding zone and delivery period.

Domain	Fixed generator	Changing first-order output
Technical safety	NIST's performance-based structural-fire work develops validated models, experiments, and performance criteria rather than prescribing one material and construction sequence for every building.	Different structures, materials, and protective designs can qualify when current evidence shows that they meet the shared performance requirement.
Scientific knowledge	Inquiry binds participants to observation, reproducibility, causal comparison, criticism, and revision rather than to a protected conclusion.	Barry Marshall and Robin Warren's evidence for <i>Helicobacter pylori</i> changed the accepted account and treatment of gastritis and peptic ulcer, as summarized by the 2005 Nobel Prize press release . The changed answer is evidence that the corrective generator outranked the old answer.
Religious adjudication	Rabbinic textual argument and majority decision can operate as an authorized decision generator.	The ruling in a new dispute is an output of that procedure even within a wider religious order that may remain predominantly first-order.

Markets and contracts make the logic especially visible. The shared rule is not a single price or promise. It is the rule by which present bids generate a price or present consent generates an obligation. A first-order craft order, by contrast, can prescribe the proper material, tool, gesture, and sequence because fidelity to that concrete answer is itself the mark of good workmanship. A lifted performance order fixes how safety or quality must be demonstrated and permits the qualifying technology to change.

Boundary rules and falsifiers

1. **Detail is a strong indicator, not the essence.** Thirty-nine named categories, a district *Ordnung*, or an elaborate washing sequence strongly suggests first-order solidarity when the answers are followed as self-compulsorily proper. An elaborate election or market algorithm shows that a generator can also be detailed.
2. **Fewness is not the essence of lifting.** Generative compression is common because one rule can yield many outputs, but a short sacred command can remain first-order and a lifted constitution can fill volumes.
3. **Revision is not sufficient.** First-order rules can be extended, interpreted, or periodically updated. Ask whether the community treats the procedure or the resulting concrete rule as the primary shared obligation.
4. **Pluralism is not sufficient.** A lifted generator can produce plural outputs, but it can also generate one uniform answer. First-order plurality across subcultures does not itself create lifted solidarity.
5. **Corrigibility is independent.** A first-order order can respond to reality, and a lifted generator can be closed: "whatever the authorized body declares" is a second-order rule even when no evidence may correct it.
6. **The single slot remains single.** Meta-rules, current knowledge, and generated answers are layers of one weave. Lifting does not install a second evaluator above a first bigOther.

Dual religious identification and the converso hard case "I am both Christian and Jewish" does not by itself establish two independently operative bigOthers. In a person exposed to conversion, persecution, family memory, secrecy, and mixed practice, the same self-description is compatible with several architectures:

1. **Strategic camouflage:** one operative weave plus outward conduct required for safety or standing.
2. **Incumbent reinterpretation:** one tradition supplies final interpretive priority while retaining material from the other.
3. **Inverse reinterpretation:** the other tradition governs the same retained material.
4. **Syncretic successor:** selected strands from both have been rebraided into one new governing programme.
5. **Ponerogenic capture:** an organized power preserves inherited legitimacy while deforming sacred language to conceal domination; mixture alone does not establish this diagnosis.
6. **Liminal instability:** unbraiding and rebraiding remain incomplete, producing oscillation, contradiction, and guilt without a stable successor.

7. **Genuine dual evaluator:** two incompatible authorities remain independently final over the same conduct without hierarchy, reinterpretation, contextual division, or a third governing rule.

Only the seventh configuration directly challenges strict single-slot exclusivity. The test is not the identity label but the update path: Which authority determines what a retained symbol, obligation, or transgression means? Which can produce guilt, authorize correction, or veto the other? Can either be revised without permission from the other or from a third rule? Do those relations remain stable across years and same-domain conflicts?

The neutral descriptions are **integration, reinterpretation, rebraiding**, and **successor formation**. Use *capture* only when evidence shows an actor or organized power, a foreign operative purpose, retained inherited legitimacy, semantic deformation, dependency or domination, and concealment. Under persecution, outward ritual and public avowal are especially weak evidence of the operative architecture. This case is a theory-generated hard test, not a general historical classification of conversos.

Blood feud as a corporate-subject hard case The originating Culture Mechanics proposition is:

Blood feud is war between clan multi-mind-selves: biological persons are identifiable actors and responsible participants, but the clan may operate as the owner of injury, debt, retaliation, compensation, settlement, and memory.

This is a **conditional application hypothesis**, not the definition of every feud. [Karen Paige Ericksen and Heather Horton's cross-cultural study of kin-group vengeance](#) records cases in which the duty to avenge and liability for an offense extend through kin, including substitution of a perpetrator's relative as a target. [Max Gluckman's "The Peace in the Feud"](#) treats feud as a rule-governed relation embedded in wider, cross-cutting allegiances rather than uncontrolled serial anger. These sources support examining corporate implication; they do not establish the Culture Mechanics multi-mind-self.

The stronger classification gains support where the evidence shows:

- an injury to one member is authoritatively owned as an injury to the kin group;
- another member may retaliate as the group's organ and another member of the opposing group may stand as an eligible target;
- the debt, honour, or claim persists across biological turnover;
- compensation is collected, paid, or refused corporately;
- refusal to perform the inherited obligation attracts group sanctions;
- and recognized collective procedures can remember, transfer, settle, or terminate the relation.

The diagram is therefore:

Substitution among persons is especially probative because it suggests that the operative juridical unit has shifted from the individual act to the continuing group relation. It is not decisive. Kin selection, mutual protection, deterrence, reputation, honour, material competition, marriage bargains, and weak state capacity can produce similar conduct. The multi-mind-self classification should be weakened or rejected where only the original wrongdoer is liable, no continuing collective perspective owns the debt, compensation and settlement remain individual, and group-level prediction adds nothing beyond those alternatives.

The case also illustrates **subjecthood absorption** only when a member lacks legitimate standing to refuse the inherited blood-and-honour jurisdiction. A corporate procedure that preserves personal innocence, appeal, compensation, exit, and public adjudication may form a collective agent without fusion. [Giuseppe Dari-Mattiacci and Nuno Garoupa](#) model the historical transition from communal liability to individual responsibility and public enforcement. Their economic explanation is a neighbouring alternative, not evidence that exogamy caused the transition or that clans are literally collective minds.

Teacher and classroom A teacher legitimately possesses coordination authority, normative authority over classroom procedure, and domain-specific epistemic authority. Agency is supported when the teacher shows methods, welcomes checks, admits mistakes, and trains pupils to reproduce the reasoning. Authority-gating occurs when “the teacher says so” replaces an available calculation and questioning is treated as misconduct.

Unknown institutional spokesperson Millions of citizens may trust a spokesperson whom none knows personally because the office, credential, channel, and institution authenticate the speech. This can be rational delegated knowledge. It becomes institution-gated when the same evidence is rejected without the institutional signature, when the institution’s claim cannot be independently defeated in principle, or when the spokesperson’s authority extends beyond the institution’s actual jurisdiction.

Political causal story A public condition is narrated as the product of a chosen culprit, a defined victim, and a remedy administered by the institution already seeking greater authority. The story may be correct, partly correct, or strategically distorted. Epistemic agency requires comparison with alternative causal models, omitted variables, base rates, predicted consequences, and the institution’s incentives—not automatic rejection merely because the story is political.

Counter-institutional capture A person recognizes genuine institutional failures and begins questioning official sources. They then adopt a counter-community whose master signifier—*Awakening* or *Hidden Truth*—classifies every institutional statement as deception and every counter-source as courageous. This is not yet cognitive liberty. The gate has changed direction, but source authorization still preempts symmetrical evaluation.

The failure is not that the source or community is rival. Rival institutions can provide necessary correction. The failure is that the successor gatekeepers become preemptive, classify their own authorization as sufficient, and disable symmetric evaluation and correction.

Repeater and crowd One prestigious speaker reaches a large audience because office, channel, and reputation amplify the signal. A crowd of individually weak transmitters can nevertheless produce equal or greater gain by repeating the phrase, displaying the same emotion, and making unanimity visible. The example distinguishes unequal node gain from aggregate field amplification.

Trusted opinion leaders: medical KOL and social-media influencer A medical KOL may function as a trusted opinion leader by combining domain expertise, professional standing, institutional authorization, personal trust, interpretation of technical evidence, access to a common professional audience, and peer-network brokerage. A YouTube influencer may acquire the same broader position through attention, familiarity, perceived authenticity, identity fit, parasocial attachment, audience feedback, and platform amplification. A physician YouTuber may occupy both application-specific positions. The trusted-opinion-leader profile preserves the difference between professional epistemic authority and audience intimacy while making their possible referral and transmission functions comparable.

Neither follower count nor academic rank establishes that a person is a trusted opinion leader. The case should be indexed by topic, audience, setting, channel, and time, and should trace how the leader was recognized or cultivated, what message entered, how it changed, what peers did with it, and whether apparently independent signals shared one source. The same profile can carry reliable knowledge or sponsor-shaped promotion; adoption does not decide which.

Cultural domain boundary Crossing from one region into another may reveal a sharp change in house forms, flower decoration, street care, or customs such as *Kehrwoche*. The magnetization analogy treats the boundary as a possible cultural domain wall maintained by dense local reinforcement. The visible contrast is an observation to be explained, not proof that all residents are synchronized or that geography caused the pattern.

Broadcast authority topology The *Volksempfänger* placed a distant authorized voice into many homes while listeners could understand themselves as members of one simultaneous audience. The culture-mechanical point is the replicated teacher-before-class geometry: common attention, common reception, authority, and narrative could converge. The historical example does not imply that the message succeeded uniformly.

Collective ownership Two assigned collaborators may coordinate without ever experiencing the task as *ours*. By contrast, a *Bahner* who protects the railway beyond the measured private task, a resident who treats common space as belonging to the civic *we*, or a Subak participant who maintains a continuing irrigation-ritual order illustrates the stronger unitary-owner hypothesis. Each remains a candidate explanation requiring comparison with incentives, habit, surveillance, and personal virtue.

26. Cross-references and branching concepts

Related term	Short semantic definition	Relation to epistemic agency under mechanical solidarity
Culture mechanics	Proposed framework beginning with homo duplex, the local bigOther, its mythological lens, and its coupling interface.	Supplies the individual source architecture from which the field account begins.
Lacan's big Other / shared symbolic protocol	The locus of language, law, and symbolic authority; functionally translated here as the on-the-wire protocol among local bigOthers.	Makes local classifications publicly intelligible without perfectly copying private states.
Epistemic dependence	Necessary reliance on other knowers and institutions.	The unavoidable starting condition, not itself a defect.
Personal epistemic authority	A trusted person's considered judgment functioning as evidence.	Healthy when competence is domain-limited and trust remains defeasible; preemptive when the person becomes a permissioning layer.
Epistemic vigilance	Monitoring communicated information for competence, honesty, coherence, and evidence.	Helps calibrate dependence without collapsing into gullibility or indiscriminate distrust.
Epistemic credulity	Insufficiently discriminating acceptance of communicated claims.	One possible disposition or failure mode; ordinary authority-gating is often selective rather than generalized.
Epistemic trust anchor	A person or institution whose authorization gives claims presumptive credibility.	Can provide rational delegation or become a preemptive reality-validation node.
Epistemic gatekeeper	A node that filters what a person admits as knowledge.	Names the personal, institutional, distributed, or symbolic routing structure.
Preemptive gatekeeper deference	Treating the gatekeeper's judgment as replacing rather than supplementing accessible evidence.	Marks the pathological transition from reliance to preemption.
Authority-gated belief updating	Updating primarily according to recognized authorization.	The central failure mechanism.
Asymmetric epistemic permeability	Unequal openness to evidence depending on its authorized route.	Explains how easy persuasion and difficult correction can coexist.
Role-conferred epistemic authority spillover	Transfer of authority from coordination, morality, care, or one knowledge domain into another.	Explains how formal offices acquire epistemic force they have not independently earned.
Pastoral epistemic authority	Epistemic trust grounded in guidance, care, protection, or personal interpretation.	Can support judgment or make surrender feel like safety.
Socialization into institutional trust	Learning which offices, credentials, institutions, and channels may certify reliable knowledge.	Installs the background trust architecture through which later claims are evaluated.

Related term	Short semantic definition	Relation to epistemic agency under mechanical solidarity
Lifted mechanical solidarity	Shared binding rules generate, select, apply, and revise concrete answers.	Explains how one full capture can produce changing outputs and can, as one application, constitute differentiated citizens, institutions, and jurisdictions.
Organic solidarity	Cohesion through specialization and interdependence.	Produces differentiated professions and institutions whose legitimacy may be supplied by lifted mechanical solidarity.
bigOther	Culture-mechanical sentiment classifier linking symbolic order to felt legitimacy, shame, loyalty, and belonging.	Supplies the local source and receiver through which field authority becomes affectively operative.
Mechanical-solidarity field	Emergent coherence among compatible local bigOthers that acts back through expectations, sanctions, institutions, and apparent consensus.	Names the group effect within which epistemic agency is exercised.
Distributed bigOther	Dynamically maintained symbolic-affective network state reproduced by local bigOthers, institutions, roles, practices, and artifacts.	Turns individual signals and enforcement into a self-reinforcing social field with memory.
bigOther-presence / bigOther-as-Thou	Project-developed terms for the field or symbolic authority locally encountered as an objectively present Other.	Names one phenomenological form of field back-action without identifying the experience with its whole mechanism.
Multi-mind-self	Distributed bigOther integrated enough to perceive, remember, judge, intend, own, and act with collective continuity.	Names a possible collective agent, not every crowd or mechanically solidary field.
Unitary ownership by the multi-mind-self	One collective agent owns and cares through many <i>beseelte</i> persons.	Reinterprets successful “shared ownership” as collective-person ownership rather than fractional private psychology.
Privileged authority-addressed programming topology	A differentiated authority position addresses a comparatively uniform audience under common attention.	Proposed recurrent geometry that can heighten reception and synchronization without defining mechanical solidarity.
Repeater	A local bigOther with greater gain, reach, credibility, frequency, connectivity, or institutional amplification.	Explains unequal influence while preserving the claim that every local bigOther transmits.
Trusted opinion leader	A person to whom members of a field recurrently refer for judgment, interpretation, or validation.	Names the human composite position that may combine repeater gain, gatekeeping, personal epistemic authority, translation, modelling, brokerage, representation, and field feedback.
Master signifier / S1	Privileged signifier organizing identities and bodies of knowledge; translated here as a compressed protocol token.	Can select and activate the common interpretive mode; becomes pathological when it terminates inquiry.
Laser synchronization	Metaphor for dynamic alignment of attention, affect, interpretation, and action.	Describes how many local classifiers enter a coherent common mode.

Related term	Short semantic definition	Relation to epistemic agency under mechanical solidarity
Clockwork coordination	Project-developed analogy for differentiated contributions routed toward a common result.	Resembles the organizational form associated with organic solidarity but is not identical with the cohesion organic interdependence produces.
Ideological power	Michael Mann's category, adapted by Rainer Mausfeld for power over sense-making categories, interpretive contexts, and framing narratives.	Names a possible macro-level means of programming the interpretive and trust environment; this entry focuses more broadly on the subject-side mechanisms and their corrigibility.
Causal story	Narrative assigning cause, responsibility, victim, fixer, and remedy.	Political-scale mechanism for organizing the distributed bigOther and forming agendas.
Persuasion	Process of changing belief, evaluation, identity, or action.	Can restore or suppress agency depending on epistemic direction, reciprocity, and correction.
Socratic manipulation	Questions that simulate open inquiry while steering toward a preselected conclusion.	Shows why an autonomy-flavoured method is not automatically truth-directed.
Contaminated mindware	Learned rules or beliefs that impair rationality and may disable their own evaluation.	Supplies content and anti-correction rules that authority and identity can protect.
Motivated reasoning	Directional use of reasoning toward a preferred conclusion.	Often occurs downstream of identity, sentiment, or authority-gated classification.
Bonhoefferian Dummheit	Socially induced loss of inner independence despite intact intelligence.	Describes the person-level result of power-saturated, slogan-mediated capture of judgment.
Normopathic adaptation	Adaptation to a pathological social normality until it no longer appears pathological.	Describes the population-side reproduction of a captured epistemic order.
Need for closure	Preference for definite resolution and aversion to ambiguity.	Can accelerate attachment to an S1 or authority that fills uncertainty.
Epistemic adulthood	Capacity to inspect and revise inherited standards and trust architecture within a fully installed lifted program.	Names the developmental achievement; it is reflective agency within full capture, not escape from programming.
Cognitive liberty	Reflective distance from socialization combined with continued capacity for trust and participation.	Names positive freedom under a universal, corrigible meta-order with bounded subordinate authorities.
Epistemic emancipation	Lifting from full capture by shared concrete answers to full capture by a reality-answerable generator of answers.	Names the practical unbraid/rebraid problem through which inherited answers lose finality without necessarily disappearing.
MCIP	Mirror, Cut, Invite, Promise.	Proposed micro-method for restoring agency while keeping the successor weave and its interpreters corrigible.
Piety toward the real	Humble willingness to let complex reality correct concepts, stories, institutions, and conviction.	Supplies the normative standard and final right of refusal.

Related term	Short semantic definition	Relation to epistemic agency under mechanical solidarity
Holistic structural realism	Model-centered epistemology in which concepts and operations are tested through prediction, surprise, and revision.	Supplies the positive reality-correction loop used by this entry.
Moral individualism	Shared commitment to the equal dignity and rights of persons.	Prevents factual correction and respect for social reality from becoming contempt for persons or worship of institutions.
Nächstenliebe	Love of neighbour directed toward the concrete person's reality-based good.	Requires concern and sometimes intervention while forbidding instrumental dehumanization.

27. Scope and terminological cautions

Epistemic agency under mechanical solidarity is a proposed synthetic term, not the established name of a single scientific theory or diagnostic category. It connects questions from social epistemology, Durkheimian sociology, Lacanian psychoanalysis, developmental theory, political psychology, narrative theory, persuasion research, and the proposed framework of culture mechanics.

Several boundaries are essential:

1. **It is not an anti-institutional doctrine.** Institutions are indispensable instruments of distributed knowledge. The problem is opacity, monopoly, domain spillover, preemption, and resistance to correction—not institutional form itself.
2. **It does not idealize personal verification.** Direct checking is decisive only where it is competent and proportionate. Elementary arithmetic cannot replace specialized medicine, engineering, history, or science; it can sometimes expose a particular claim within them.
3. **It does not equate disagreement with independence.** Automatic contrarianism and submission to an uncorrectable or preemptive gatekeeper are not cognitive liberty; the mere fact that a source rivals an incumbent does not decide the question.
4. **It is not a theory of intelligence.** High intelligence can coexist with authority-gated updating; modest intelligence can coexist with strong epistemic integrity.
5. **It is not a clinical diagnosis.** Credulity, Dummheit, normopathic adaptation, and capture are used as conceptual cross-references, not licenses to pathologize political or religious opponents.
6. **Mechanical solidarity is not necessarily hierarchical or unhealthy.** The large-group/small-elevated-group pattern is one important architecture, not the essence of the Durkheimian concept.
7. **A master signifier is not identical with mechanical solidarity.** It is one symbolic operator that may help organize solidarity.
8. **A causal story is not necessarily a lie.** Narrative selection is unavoidable; the test is comparative explanatory and predictive adequacy, openness about uncertainty, and responsiveness to consequences.
9. **Persuasion method does not determine truth.** Gentle inquiry can mislead, and forceful intervention can sometimes protect life. Epistemic direction, love of neighbour, proportionality, consequences, and corrigibility must be considered together.
10. **Piety toward the real is not submission to whoever speaks for “reality.”** It requires the opposite: no authority's certification can remove the possibility of external correction.
11. **Cognitive liberty is not epistemic autarky.** Its mature form is conscious interdependence, not isolation.
12. **“Freeing” is not self-authenticating.** A liberation campaign can install closed or uncorrectable successor culture mechanics. The liberator must expose their own model to the same tests demanded of the other person; replacement or rivalry alone is not the failure criterion.
13. **The field is neither isolated individual psychology nor a new physical force.** Culture mechanics treats relational organization as causally real and irreducible to independently formed individuals, while locating its implementation in persons, communication, institutions, practices, and artifacts. Field physics remains an analogy.
14. **The privileged programming topology is not universal or inherently manipulative.** Horizontal and leaderless synchronization also occur. A teacher can use the topology for truthful education, and an audience can resist it.

15. **A distributed bigOther is not automatically a multi-mind-self.** The latter requires sufficient continuity, memory, judgment, intention, and coordinated action; a momentary crowd may remain below that threshold.
16. **Unitary collective ownership is not legal title.** It is a proposed psychological-social relation and must be compared with incentives, habit, surveillance, personal virtue, and ordinary organizational coordination.
17. **Collective agency does not erase personal responsibility.** *Beseelte* persons remain biological, moral, and legal actors even when they enact a continuing collective perspective.
18. **bigOther-presence does not settle metaphysics.** The theory proposes one functional route by which an authority becomes present and conduct-directing; it neither proves nor disproves additional religious or metaphysical claims.
19. **Plural authorities are not parallel local bigOthers.** The main processor may compare alternatives and external counterfields may support reflection, but one local bigOther executes one operative lens. Compatible packages can be integrated; incompatible capture requires unbraiding and rebraiding rather than runtime ranking.
20. **Full, lifted, universal, and corrigible are different properties.** Full describes complete slot occupancy; lifted means that shared binding force lies in rules that generate, select, apply, and revise concrete answers; universal describes how far those rules govern; and corrigible describes openness to inspection, succession, and reality's right of refusal. Particular authorities can be plural and domain-limited beneath a universal lifted order.

The framework is descriptive before it is accusatory. Shared trust, narratives, symbols, and institutions can coordinate real knowledge and protect human dignity. The normative threshold is crossed when the system disables the very procedures by which its claims, classifications, and authorities could be corrected.

Semantic summary

- **Broader class:** social and developmental theory of situated epistemic agency.
- **Central object:** the person's relation to a socially installed architecture of epistemic trust.
- **Individual source and receiver:** the local bigOther within homo duplex.
- **Shared communication interface:** Lacan's big Other, functionally translated as the on-the-wire symbolic protocol.
- **Starting condition:** unavoidable epistemic dependence.
- **Social environment:** a mechanical-solidarity field, often combined with organic differentiation.
- **Order-level distinction:** first-order solidarity shares concrete rules and answers; lifted solidarity shares the rules that generate, select, apply, and revise concrete answers.
- **Generative compression:** fixed installed meta-rules can combine with changing knowledge and situations to produce many changing concrete outputs; neither fewness nor detail alone defines the order level.
- **Modern structural possibility:** lifted mechanical solidarity can span an organically differentiated and plural society, but plurality and division of labour are consequences or applications rather than the definition of lifting.
- **Complete slot occupancy / full capture:** first-order and lifted programs can each fully occupy the one local bigOther; fullness is not itself pathology.
- **Lifted jurisdiction:** an answer-generating meta-order may govern universally while allocating and limiting plural first-order outputs, authorities, and jurisdictions.
- **Corrigibility axis:** first-order and lifted full captures can each remain open or become closed; rivalry and replacement alone do not decide which.
- **Transmission process:** socialization into institutional trust.
- **Authority nodes:** persons, roles, institutions, professions, identities, channels, and apparent consensus.
- **Unequal-gain node:** repeater.
- **Human composite authority position:** trusted opinion leader.
- **Applied person-level analysis:** a trusted-opinion-leader profile separates transmission capacity, authority basis, routing function, jurisdiction, independence, and corrigibility rather than treating influence as one score; analogous axes can profile nonhuman authority nodes without calling them leaders.
- **Privileged but non-universal geometry:** differentiated authority addressing a comparatively uniform audience.
- **Proposed receptive condition:** the authority-addressed programming state.
- **Symbolic operator:** master signifier or S1 as compressed protocol token.
- **Narrative mechanism:** mythology or causal story.
- **Communication model:** audience-modelled reconstruction-finite messages are composed against an anticipated recipient codebook and induce a larger factual, causal, moral, and authorization model.
- **Communication audits:** decompression analysis compares surface content, omissions, assumed recipient, predictable and actual reconstruction, alternative decompressions, and resulting action or authorization.
- **Political-language source maxim:** Wegner's *Talking Points* presents political language as speech designed to

win trust and power over people's lives; Culture Mechanics translates that forceful claim into political language as an authorization bid.

- **Political-power audit:** the authorization payload separates policy agreement from the power, objects, jurisdiction, duration, discretion, oversight, revocability, and epistemic spillover requested through a causal story.
- **Single-slot capture constraint:** compatible material may reinforce or extend the installed weave; incompatible governing capture requires incumbent unbraiding and successor rebraiding.
- **Dynamic process:** synchronization and field back-action among local bigOthers.
- **Clockwork coordination:** differentiated contribution through roles, interfaces, handoffs, aggregation, and a common meta-order; it has an affinity with differentiated unity but is not its definition.
- **Bounded laser synchronization:** strong alignment restricted to a selected variable, task, time, and jurisdiction, compatible with person-preserving unity.
- **Generalized and jurisdictionalized laser synchronization:** alignment extended across domains and made compulsory; a pathway to fusion pressure rather than a sufficient condition for fusion.
- **Independent collective axes:** cultural interoperability concerns whether differentiated groups remain in one functioning shared field; subjecthood absorption concerns what legitimate standing persons retain against the collective.
- **Emergent network state:** the distributed bigOther.
- **Possible collective agent:** the multi-mind-self.
- **Activation profiles:** a continuing multi-mind-self can move between clockwork baseline and laser episodes; an episodic multi-mind-self crosses the agent threshold only during bounded activation; a latent distributed bigOther, de-animated remainder, and culturally lost system are different states.
- **Nested-author boundary:** collective agency can add an operative *we* while participating *Is* retain legitimate standing; fusion begins when that standing is displaced or absorbed.
- **Collective-property hypothesis:** unitary ownership by the multi-mind-self through many *beseelte* persons.
- **Dual-identification hard case:** mixed avowal or ritual does not establish two operative evaluators; the test is whether two incompatible authorities remain independently final, affectively alive, and mutually ungoverned in the same domain.
- **Corporate-feud hypothesis:** a feud becomes a candidate conflict between clan-scale multi-mind-selves when injury, liability, retaliation, compensation, settlement, and memory are owned and administered by continuing group perspectives rather than merely coordinated individuals.
- **Central pathological mechanism:** authority-gated belief updating.
- **Characteristic observable pattern:** asymmetric epistemic permeability.
- **Pastoral subtype:** care-grounded surrender of epistemic judgment.
- **Individual susceptibility factors:** identity dependence, need for closure, authoritarian submission, low vigilance, and fear of exclusion.
- **Proposed adoption pathway:** cognitive relief can mediate preference for an authority-endorsed compressed formula under complexity, uncertainty, public exposure, or responsibility for judgment.
- **Population-level outcomes:** distributed enforcement, Dummheit, and normopathic adaptation.
- **Healthy configuration:** a universal corrigible meta-order with calibrated, plural, domain-limited dependence upon particular authorities.
- **Developmental achievement:** epistemic adulthood.
- **Normative freedom:** cognitive liberty.
- **Normative orientation:** piety toward the real.
- **Moral orientation:** truth joined with Nächstenliebe and epistemic humility.
- **Liberation process:** epistemic emancipation.
- **Proposed conversational intervention:** MCIP—Mirror, Cut, Invite, Promise.
- **Central normative question:** Does authority provide a corrigible route to reality, or does its certification replace reality-testing?

Example of use

From the perspective of **epistemic agency under mechanical solidarity**, the citizens' reliance on the institution was not irrational merely because it was socially learned. The decisive problem was that institutional authorization had become preemptive: identical evidence was rejected outside the approved channel, elementary checks were treated as disloyal, and the institution claimed authority to define its own failures. Restoring agency therefore required more than transmitting contrary facts. It required making the inherited trust architecture visible, preserving social permission to doubt, and reopening a route through which reality could correct both citizen and institution.

Compact formulas

Healthy form:

socialization → institutional trust → delegated expertise → exposed evidence and method → prediction and correction → calibrated reliance

Field form:

local bigOthers → shared symbolic protocol → reciprocal classification and response → mechanical-solidarity coherence → distributed bigOther → field back-action upon local judgment

Programming-topology form:

differentiated authority + comparatively uniform audience + common attention and reception → heightened receptivity → activation, reinforcement, or reprogramming → stronger field coherence

Audience-modelled reconstruction:

communicator's model + anticipated recipient codebook → selected facts, omissions, sequence, symbols, and cues → finite message → recipient reconstruction → factual, causal, moral, action, and authorization consequences

Political language as authorization bid:

relevant structure + represented threat or promise + trusted protector/fixer + feared or blamed opponent → follow, believe, trust, oppose → requested grant of power or delegated jurisdiction

Authorization payload:

threatened structure + victim + culprit + protector/fixer + preferred remedy → requested power × objects × jurisdiction × duration × discretion; oversight, revocation, succession, and termination evidence remain separate tests

Cognitive-relief pathway:

complexity + uncertainty + responsibility → compressed authority formula → subjective relief and certainty → reduced checking or decompression → possible authority-gated reinforcement

Incompatible-capture form:

incompatible governing offer → incumbent bindings loosened and unbraided → liminal instability or dependency → retained and new strands rebraided → one successor lens installed → field reinforcement and defensive reasoning

Order-level and lifted-jurisdiction form:

fixed M + current K_t + situation C → binding R_t(C); a universally governing M may constitute, allocate, limit, coordinate, succeed, and correct plural first-order outputs and jurisdictions

Collective-owner form:

distributed bigOther + continuity + group judgment and intention → multi-mind-self → one collective owner acting through many *beseelte* persons

Dual-evaluator hard test:

mixed identity label → inspect final interpretive priority, guilt, veto, correction, and stability; two incompatible same-domain authorities remaining independently final without a third rule → evidence against the single slot

Corporate-feud form:

injury to member → group-owned debt → substitutable group bearer retaliates or compensates → opposing group remembers and responds; collective ownership and continuity must outperform individual-incentive alternatives

Activation-state form:

viable distributed memory and organization + bounded high coupling + common attention + reciprocal feedback + coordinated execution → possible episodic multi-mind-self; activation asks whether it acts as a self, fusion asks what standing participating persons retain

Pathological form:

socialization → master signifier and trust anchor → field-amplified authorization → authority-gated updating → asymmetric permeability → defensive rationalization and collective enforcement

Developmental form:

socially authored trust → reflective distance → self-authored trust → self-transforming trust → cognitive liberty

Normative form:

Respect persons unconditionally; evaluate propositions conditionally by evidence; regulate action through justice; preserve reality's right to correct every model and authority.

Liberation form:

full capture by shared concrete answers → unbraid their claim to finality → rebraid a shared reality-answerable generator → full lifted capture; Mirror the person → Cut the protected false connection → Invite independent judgment → Promise support for living with the result

Terminological provenance and primary sources

The vocabulary above does not come from one theory. The following map distinguishes established concepts from adaptations and new syntheses. Links point to the relevant publications rather than to conversations about them.

Established terms used substantially in their source sense

- **Mechanical and organic solidarity** — Émile Durkheim. *De la division du travail social* (1893) is the defining source. Durkheim's concepts are retained; *lifted mechanical solidarity* is the extension made by this entry.
- **Collective effervescence** — Émile Durkheim. *Les formes élémentaires de la vie religieuse* (1912) describes collective excitation, reciprocal amplification, and rhythmic unity. The laser-moment comparison is the present project's analogy, not Durkheim's terminology.
- **Epistemic dependence** — John Hardwig. "Epistemic Dependence," *The Journal of Philosophy* 82(7), 1985, pp. 335–349 (DOI) is the direct source for unavoidable rational dependence on other knowers.
- **Cognitive authority** — Patrick Wilson. *Second-Hand Knowledge: An Inquiry into Cognitive Authority* (1983) analyzes why people recognize some others as proper influences on what they think.
- **Epistemic authority and preemption** — Linda Trinkaus Zagzebski. *Epistemic Authority: A Theory of Trust, Authority, and Autonomy in Belief* (2012) is the principal source. Christoph Jäger's 2016 critique is especially relevant to the danger that authority displace understanding.
- **Choosing among experts** — Alvin I. Goldman. "Experts: Which Ones Should You Trust?" (2001) (DOI) grounds several audit criteria used here: arguments, agreement among experts, interests and biases, and track records.
- **Epistemic vigilance** — Dan Sperber, Fabrice Clément, Christophe Heintz, Olivier Mascaro, Hugo Mercier, Gloria Origi, and Deirdre Wilson. "Epistemic Vigilance" (2010) is the defining paper for vigilance toward communicated information.
- **Epistemic trust, mistrust, and credulity** — Chloe Campbell, Michal Tanzer, Rob Saunders, Thomas Booker, Elizabeth Allison, Elizabeth Li, Claire O'Dowda, Patrick Luyten, and Peter Fonagy. "Development and Validation of a Self-Report Measure of Epistemic Trust" (2021) defines and operationalizes this three-part construct. Its *credulity* scale is narrower than the broad nonclinical usage in this entry.
- **Pastoral power** — Michel Foucault. "The Subject and Power" (1982) is a concise primary source for the individualized, totalizing form of guidance from which *pastoral epistemic authority* is adapted.
- **Master signifier, S1/S2, and the master's discourse** — Jacques Lacan. *Le Séminaire, Livre XVII: L'envers de la psychanalyse* (1969–1970) is the central source for the four discourses. *Seminar XX: Encore* contains Lacan's characterization of the signifier as "stupid."
- **Causal stories** — Deborah A. Stone. "Causal Stories and the Formation of Policy Agendas," *Political Science Quarterly* 104(2), 1989, pp. 281–300 (DOI) is the defining paper.
- **Motivated reasoning** — Ziva Kunda. "The Case for Motivated Reasoning" (1990) is the canonical review.
- **Need for cognitive closure** — Donna M. Webster and Arie W. Kruglanski. "Individual Differences in Need for Cognitive Closure" (1994) defines and measures the construct.
- **Dysrationalia and contaminated mindware** — Keith E. Stanovich. "Dysrationalia: A New Specific Learning Disability" (1993) introduces *dysrationalia*; "Contaminated Mindware" (2009) develops the latter concept.

Borrowed concepts whose meaning is deliberately extended here

Term in this entry	Source and responsible thinker	Difference in the present usage
Lifted mechanical solidarity	Durkheim's mechanical solidarity	A project-developed order-level distinction: common binding force is moved from concrete rules and answers to rules that generate, select, apply, and revise them. Modern plural integration is one important consequence, not the definition. <i>Lifted</i> is not Durkheim's term.
Socialization into institutional trust	Wilson on cognitive authority; Niklas Luhmann on trust ; Anthony Giddens on expert and abstract systems	Synthesizes these antecedents with Durkheimian solidarity into a specific many-to-few socialization mechanism; none of the three authors uses the complete model stated here.
Preemptive gatekeeper deference	Zagzebski's Preemption Thesis	Restricts and radicalizes preemption into a pathological permissioning relation in which contrary evidence cannot be admitted without authorization.
Pastoral epistemic authority	Foucault's pastoral power	Isolates the epistemic effect of care-grounded guidance; it is narrower than Foucault's historical account of pastoral power.
Lacan's big Other as shared symbolic protocol	Lacan's locus of language, law, and symbolic authority	"On-the-wire protocol" is a culture-mechanical functional translation of one aspect, not Lacan's definition or a complete exegesis.
bigOther, local bigOther, distributed bigOther	Lacan's big Other	Recasts symbolic authority as a local affective classifier and an emergent network state. These are culture-mechanical adaptations, not Lacan's definitions.
bigOther-presence and bigOther-as-Thou	William James on felt objective presence ; Martin Buber's <i>I and Thou</i>	Borrows phenomenological and relational cues for how field authority may be locally encountered. Neither author proposed the local processor or distributed-field mechanism.
Mechanical-solidarity field	Durkheim's mechanical solidarity and collective consciousness	Treats solidarity as emergent symbolic-affective coherence with back-action upon local judgment. The field ontology and physical analogies are proposed here.
Laser synchronization	Analogy with physical lasers	A heuristic metaphor for social coupling and coherent collective output, not a claim that Durkheim or Lacan proposed a laser model or that social alignment obeys laser physics.

Term in this entry	Source and responsible thinker	Difference in the present usage
Magnetization, remanence, domains, domain walls, charged particles, photons, and repeaters	Analogies with physics and network engineering; William James's magnetic phenomenology and Le Bon's magnetic crowd language are source neighbors	Project-developed models for durable alignment, persistence, boundaries, source/back-action, relative carrier-independence, and unequal gain. James and Le Bon did not propose this topology, and it asserts no physical identity.
Trusted opinion leader	General opinion-leadership and diffusion research, including Thomas W. Valente and Patchareeya Pumpuang	Adds a project-developed composite definition centred on the human referral position and distinguishes its repeater, gatekeeping, authority, translation, modelling, brokerage, representation, and feedback functions. It is broader than the medical-marketing category <i>key opinion leader</i> .
Multi-mind-self and unitary collective ownership	Joscha Bach's " Synthetic Sentience "; Otto von Guericke on the real unity of associations ; F. W. Maitland on moral and legal personality ; Christian List and Philip Pettit on group agency	The term <i>multi-mind-self</i> is taken from Bach. The present synthesis adds an explicit functional threshold, local bigOthers, mechanical-solidarity field formation, <i>Beseelung</i> , nested authorship, the episodic profile, the fusion axis, and the claim that one collective self can own through many persons. The other cited authors supply group-person and group-agency neighbours, not that implementation.
Privileged authority-addressed programming topology and programming state	Freud on group psychology; Green and Brock on transportation; Horton and Wohl on parasocial interaction; Chwe on common knowledge; Bourdieu on authorized speech; Collins on interaction rituals	Synthesizes several mechanisms into a new, testable geometry. No source establishes the complete compound state.
Bonhoefferian Dummheit	Dietrich Bonhoeffer, " Von der Dummheit " (1943; PDF of the complete section) (HTML transcription)	Names a family resemblance between socially induced loss of independence and the present capture model. It is not an IQ measure, diagnosis, or complete restatement of Bonhoeffer.
Audience-modelled reconstruction	Dushan Wegner, <i>Relevante Strukturen</i> (2019), especially his account of linguistic <i>Komprimierung</i> and recipient-side <i>Dekomprimierung</i>	Retains the claim that finite messages rely on an anticipated recipient's stored knowledge, then gives it a typed factual, causal, moral, and authorization model, an adversarial subtype, and a decompression audit. <i>Lossy codec</i> and <i>decoder-targeted compression</i> are project analogies, not Wegner's technical terms.

Term in this entry	Source and responsible thinker	Difference in the present usage
Political language as an authorization bid	Dushan Wegner's official Talking Points page , which states that political language seeks trust and power over people's lives	Preserves Wegner's forceful maxim, then translates it into delegated jurisdiction and connects it to relevant structures, causal stories, opponent restrictions, and bounded political authority. The term <i>authorization bid</i> , the typed payload, and the audit are project-developed.
Cognitive-relief hypothesis	Wegner's situated formulation "Denken tut weh" in <i>Relevante Strukturen</i> ; neighbouring research on need for closure, cognitive effort, and authority	Turns a memorable witness formulation into a bounded, testable mediation hypothesis about relief, checking, and authority-gated acceptance. It is not a claim about intelligence, universal motivation, or prevalence, and it should not be attributed to Wegner in this operational form.
Normopathic adaptation	Erich Wulff, <i>Psychiatrie und Klassengesellschaft</i> (1972); Joyce McDougall's psychoanalytic normopathy; Hans-Joachim Maaz, <i>Das falsche Leben</i> (2017)	Uses the family of terms descriptively for adaptation to a pathological social normality without adopting any one author's clinical or political theory. The term has more than one intellectual genealogy, so a single uncontested origin should not be asserted.
Piety toward the real	Robert N. Bellah's introduction to <i>Émile Durkheim on Morality and Society</i> (1973)	Bellah's phrase characterizes Durkheim; this entry turns it into an explicit norm of epistemic model correction. It is not Durkheim's own technical term.
Moral individualism	Durkheim, "L'individualisme et les intellectuels" (1898)	Durkheim's moral defense of the sacred individual is retained, then joined here to the distinction between unconditional respect for persons and conditional evaluation of propositions.
Cognitive liberty	Richard Glen Boire, "On Cognitive Liberty"; Jan Christoph Bublitz, "My Mind Is Mine!?" (2013)	Extends freedom from mental interference into a positive developmental capacity to inspect and revise one's socialized trust architecture. That extension is not standard in the legal literature.
Epistemic adulthood	Robert Kegan's constructive-developmental theory	Applies Kegan's subject-object and self-authorship pattern specifically to epistemic trust. The term and trust stages are new here.
Nächstenliebe / love of neighbour	Jewish and Christian ethical tradition, classically Leviticus 19:18	Applied here to truth-directed care and intervention. The reality-corrigibility rule paired with it is this entry's ethical synthesis, not a definition contained in the scriptural phrase alone.

Newly proposed terms in this synthesis

The following expressions should not be attributed to Hardwig, Durkheim, Lacan, Foucault, Bellah, Kegan, McRaney, Stone, or any other cited author unless a later source establishes otherwise:

- **epistemic agency under mechanical solidarity;**
- **authority-gated belief updating** and **institution-gated belief updating;**
- **asymmetric epistemic permeability;**
- **epistemic trust anchor, institutional epistemic proxy, and reality-validation node;**
- **role-conferred epistemic authority spillover;**
- **culture mechanics** in the specific sense used here;
- **lifted mechanical solidarity;**
- **first-order full capture, lifted full capture,** the distinction between shared answers and a shared answer generator, and **universal jurisdiction over the allocation and limitation of first-order outputs and jurisdictions;**
- **mechanical-solidarity field** and **field back-action** in the specific sense used here;
- **The Quantum Mechanics of Psychology,** the laser/clockwork correspondence, collective effervescence as a laser moment, and the claim that a laser moment can regenerate the moral protocol used by a clockwork system;
- **bounded laser synchronization** and **generalized and jurisdictionalized laser synchronization,** together with their typed relationship to fusion pressure;
- **weak-field gravity and strong-field witnesses** as an observability analogy, the three-way calm-period distinction among dormancy, de-animation, and cultural loss, and the historical hypothesis that a society can forget a synchronization technology;
- **remanence** as a social hypothesis and the Bavaria-Swabia domain-wall mapping;
- **on-the-wire symbolic protocol** as the culture-mechanical translation of Lacan's big Other;
- **bigOther-presence** and **bigOther-as-Thou;**
- **repeater** as an unequal-gain local bigOther;
- **trusted opinion leader** as the human composite position defined here, and **trusted-opinion-leader profile** as its multidimensional applied analysis of transmission capacity, authority bases, routing functions, jurisdiction, independence, and corrigibility;
- **privileged authority-addressed programming topology** and the proposed **programming state;**
- the present functional threshold, **nested authorship,** and state profiles for the **multi-mind-self,** including **episodic multi-mind-self, unitary ownership by the multi-mind-self,** and **Beseelung / beseelt** in their present technical senses;
- the **dual-identification hard case** and its independently-final-evaluator defeat condition for strict single-slot exclusivity;
- the **clan-as-multi-mind-self** and **corporate-feud hypothesis** as conditional application classifications rather than established anthropological terms;
- **epistemic adulthood, epistemic emancipation,** and the three trust-development stages;
- **state transmission, operation transmission, and Socratic manipulation** as defined here;
- **audience-modelled reconstruction, adversarial audience-modelled reconstruction,** and the **decompression audit** in their present operational forms;
- **authorization payload** and the **authorization-payload audit;**
- the **cognitive-relief hypothesis** in its present mechanistic and testable form;
- **MCIP—Mirror, Cut, Invite, Promise.**

Field, programming-topology, and collective-agent source lineage

- **Émile Durkheim** supplies mechanical and organic solidarity, collective consciousness, collective effervescence, and the non-individualist starting point. *De la division du travail social* does not contain the field-physics or local-processor analogies. *Les formes élémentaires de la vie religieuse* supplies electricity, reciprocal amplification, rhythmic unity, and “mystic mechanics” as close source neighbors, but not a laser, clockwork, or ferromagnet theory.
- **Robert N. Bellah's** introduction to *Émile Durkheim on Morality and Society* supports reading Durkheim as a theorist of collective psychology and supplies *piety toward the real*. Bellah does not propose the multi-mind implementation.
- **William James** and **Martin Buber** supply partial phenomenological neighbors for felt presence and second-person encounter. James also describes abstract realities as polarizing and magnetizing human lives. **Gustave Le Bon** uses magnetic influence and hypnotic fascination in crowd psychology. The detailed ferromagnetic-domain analogy, laser/clockwork synthesis, and causal mechanism remain project-developed and separate from their accounts.
- **Julien Benda's** *La trahison des clercs* (1927) is used as situated testimony from a period in which political passions were becoming more coherent, continuous, sacred, and intellectually systematized. **Dietrich Bonhoeffer's** “*Von der Dummheit*” (1943) is used as testimony to the person-level effects of overwhelming political or religious

- power. Their observations do not establish the weak-field analogy or the culture-mechanical explanation.
- **Lionel Shriver's "How to spot the next mania"** is used as a contemporary first-person diagnosis of renewed public manias and "collective derangement" since roughly 2012; her novel *Mania* (2024) is the fictional treatment of that concern. The change in visibility is her observation; the synchronization mechanism and historical-loss hypothesis remain the present theory's interpretation.
 - **Otto von Gierke, F. W. Maitland, Christian List, and Philip Pettit** supply increasingly explicit accounts of real group personality, moral/legal personality, and organizational group agency. Their work helps specify the threshold question while leaving the culture-mechanical implementation new.
 - **Joscha Bach's "Synthetic Sentience"** supplies the term *multi-mind-self* and a neighbouring account of gods or top-level agents enacted across minds. **Julian Jaynes's bicameral-mind hypothesis** supplies a controversial local model in which action-guiding products are experienced as divine voices rather than self-authored deliberation. Culture Mechanics' Jaynes-Bach bridge, its processor and field architecture, and its separation of collective agency from fusion are project-developed. A [critical reappraisal](#) identifies neurological and philological difficulties in Jaynes's complete historical account.
 - **Sigmund Freud, Melanie Green and Timothy Brock, Donald Horton and R. Richard Wohl, Michael Suk-Young Chwe, Pierre Bourdieu, and Randall Collins** each establish or theorize one component adjacent to the proposed programming state. Their works are linked in Section 12; none should be cited as establishing the whole authority-addressed topology.
 - The *Volksempfänger* example is documented by the [Science Museum Group's collection record](#). Its use as a technological replication of the classroom geometry is the present framework's interpretation.
 - **Durkheim's "Les principes de 1789 et la sociologie"** supplies contemporary observations about unconscious social genesis, surviving affect, invented conscious reasons, revolutionary principles as articles of faith, and structural change in European societies. It does not establish the local bigOther, single slot, field mechanism, or multi-mind-self.
 - **Karen Paige Ericksen and Heather Horton, "Blood Feuds: Cross-Cultural Variations in Kin Group Vengeance"**, supply comparative evidence concerning kin-group vengeance, duty, liability, target substitution, marriage, and adjudication. **Max Gluckman's "The Peace in the Feud"** supplies the classic account of feud as a rule-governed relation constrained by cross-cutting allegiances. The clan-as-multi-mind-self classification is the present project's hypothesis.
 - **Giuseppe Dari-Mattiacci and Nuno Garoupa, "The Rise and Fall of Communal Liability in Ancient Law"**, supply an economic model of the transition from communal liability to individual responsibility and public enforcement. Their mechanism is an alternative or complement to the culture-mechanical and exogamy hypotheses, not confirmation of them.

Opinion-leader and influencer research for operational comparison

- **Local healthcare opinion leaders — Gerd Flodgren, Mary Ann O'Brien, Elena Parmelli, and Jeremy Grimshaw.** The 2019 Cochrane review *Local Opinion Leaders: Effects on Professional Practice and Healthcare Outcomes* finds heterogeneous but probably positive effects on professional compliance with evidence-based practice and very uncertain effects on patient outcomes. It supports conditional field influence, not the complete culture-mechanical account.
- **Opinion-leader identification — Thomas W. Valente and Patchareeya Pumpuang.** *"Identifying Opinion Leaders to Promote Behavior Change"* reviews ten identification methods across almost 200 studies and compares their advantages and disadvantages. It supports identifying authority from the receiving network rather than equating formal rank with influence.
- **Peer diffusion — Leila Agha and Dan Zeltzer.** *Drug Diffusion through Peer Networks: The Influence of Industry Payments* estimates payment-associated prescribing effects among physicians and their peers in a particular anticoagulant market. The result supports peer spillover in that setting, not a universal causal law or an inference of corruption from payment alone.
- **Cultivated medical KOLs — Brian Gac, Kgosi Tavares, Hanna Yakubi, Hannah Khan, Dorie E. Apollonio, and Eric Crosbie.** *"Pharmaceutical Industry Use of Key Opinion Leaders to Market Prescription Opioids"* uses internal industry documents to show deliberate identification, recruitment, and development of KOLs. This is evidence for endogenous authority production in that case, not a definition of medical expertise or proof against every KOL relationship.
- **Social-media influencer research — Yatish Joshi, Weng Marc Lim, Khyati Jagani, and Satish Kumar.** Their systematic review *"Social Media Influencer Marketing: Foundations, Trends, and Ways Forward"* maps a developed but theoretically federated literature involving source credibility, parasocial relations, authenticity, persuasion knowledge, sponsorship, and engagement. It supplies comparison variables rather than one unified influencer theory.

- **Disclosure and authority hygiene.** The [US Centers for Medicare & Medicaid Services' Open Payments programme](#), the [HHS Office of Inspector General's speaker-programme fraud alert](#), and the [US Federal Trade Commission's social-media disclosure guidance](#) provide domain-specific examples of making financial or material relations visible. Disclosure improves inspectability but does not by itself prove corruption, falsity, independence, or safety.

Persuasion and MCIP: sources and method lineage

- **David McRaney**, *How Minds Change* (2022), is a journalistic synthesis of research and practice concerning belief change. It motivates parts of the persuasion discussion, but *state transmission*, *operation transmission*, and MCIP are not McRaney's terminology.
- **Joshua Kalla and David Broockman**, "Reducing Exclusionary Attitudes through Interpersonal Conversation: Evidence from Three Field Experiments" (2020), provide empirical evidence concerning deep canvassing and non-judgmental narrative exchange. Their intervention is not MCIP and does not show that a conversational method guarantees truth.
- **Carl R. Rogers and Richard E. Farson**, "Active Listening" (1957), are an antecedent for *Mirror*.
- **William R. Miller and Stephen Rollnick**, *Motivational Interviewing: Helping People Change* (third-edition chapter, 2013), are antecedents for reflective listening, eliciting the person's own reasons, and preserving authorship.
- **J. L. Austin**, *How to Do Things with Words* (1962), supplies the speech-act background for treating a promise as an act that creates a practical and relational commitment.
- **Jacques Lacan's** use of the *cut* supplies a loose psychoanalytic analogy for interrupting an established sequence. MCIP's *Cut* is operationally defined by this entry and should not be presented as Lacanian technique without further argument.

Independent reality-orientation source

- *Holistic Epistemology and Metaphysics: Structural Realism* supplies the model-centered loop of concepts, operations, prediction, surprise, and revision used in the positive account of reality correction.

Epistemic constitution of lifted mechanical solidarity

epistemic constitution of lifted mechanical solidarity *noun phrase* **Status:** proposed synthetic term **Fields:** social epistemology, sociology of knowledge, sociology of morality, moral and political psychology, cultural theory, institutional design, argumentation theory

Short explanation for busy readers

An **epistemic constitution of lifted mechanical solidarity** is the society-wide meta-order that governs how a plural modern society relates public life to truth. It determines which persons and institutions receive epistemic authority, what counts as admissible evidence, whether people may honestly express doubt and disagreement, how claims are publicly tested, how errors are corrected, how collective memory is preserved, and whether social belonging depends upon professing an authorized account of reality.

It is a **universally governing second-order order** and, under the single-slot principle, a **lifted full capture**. The shared binding force lies in rules that generate, select, apply, and revise concrete answers, not in one fixed catalogue of answers. Its generated outputs can include plural first-order jurisdictions; the persons, offices, professions, institutions, communities, and contracting parties beneath it can therefore remain differentiated and domain-limited even when the generator governs universally.

It is called **lifted mechanical solidarity** because citizens share an answer-generating meta-order. They can reach different first-order answers and live different religious, occupational, and personal lives while remaining bound by how answers and authorities are produced and corrected. *Lifted* is a new extension of [Émile Durkheim's distinction between mechanical and organic solidarity](#); it is not Durkheim's own term.

The concept is analytically modular. It uses [Culture Mechanics](#) to describe one implementation of the shared order, but its central truth/systemic-lying distinction can be evaluated directly through public avowal, authority, evidence, disagreement, attention, memory, and correction.

The concept covers a tension space between two ideal-typical endpoints:

A **reality-anchored, truth-seeking epistemic constitution** makes sincere disagreement visible and keeps every person, model, authority, and institution corrigible by mind-independent reality.

A **systemic-lying epistemic constitution** organizes public speech, authority, incentives, memory, and social sanctions so that an authorized representation displaces reality and ordinary people reproduce it through conformity, concealment, and ritual participation.

Most actual societies and institutions lie somewhere between these endpoints and may occupy different positions on different dimensions. Movement toward one pole normally means movement away from the other: toward sincere avowal or compelled performance; public contestability or epistemic closure; universally binding corrigible meta-jurisdiction with bounded representatives or representatives who claim epistemic sovereignty; correction by reality or protection of the authorized model.

In its shortest form:

The epistemic constitution is the cultural operating system that determines whether society's shared world remains answerable to reality or reality becomes answerable to society's authorized story.

Long semantic definition

1. General meaning

An **epistemic constitution of lifted mechanical solidarity** is the operative ensemble of second-order norms, sentiments, roles, authorities, institutions, incentives, procedures, communication practices, and everyday habits through which a differentiated society:

- distributes the authority to know, interpret, certify, teach, remember, and correct;
- establishes what may enter public consideration as evidence;
- shapes the relationship between private judgment and public avowal;
- makes some forms of trust, doubt, disagreement, and inquiry honourable and others shameful;
- converts dispersed observations and judgments into public knowledge or public appearance;
- preserves or destroys independent routes by which claims can be tested;
- rewards correction or protects institutions from correction;
- directs collective attention and memory;
- and determines whether social authorization remains subordinate to truth or substitutes for it.

As a second-order meta-order it has universal jurisdiction over the constitution, allocation, limitation, interaction, succession, appeal, and correction of first-order outputs and jurisdictions. This is one application of its more basic form: installed meta-rules combine with current inputs and a situation to generate a binding answer. Plural institutions and ways of life are possible outputs, not the definition of lifting. The constitution fully occupies the cultural slot whether it is reality-anchored or systemic-lying; corrigibility must be assessed separately from order level, occupancy, and jurisdiction.

The word **constitution** is used functionally rather than narrowly legally. The constitution may partly be written into laws and formal procedures, but much of it is enacted through professional norms, schooling, media routines, prestige, sanctions, language, rituals, algorithms, reputations, and the anticipated judgment of others. It is what society actually runs, not merely what its formal declarations say it runs.

An epistemic constitution is therefore not a catalogue of officially correct propositions. It is the deeper order that determines:

who may say what, through which channels, under which burdens, with which social consequences, subject to which tests, and with what possibility of correction.

This usage has a close contemporary neighbour in **Jonathan Rauch's** *The Constitution of Knowledge*, which describes a liberal social system for turning disagreement into knowledge. The present term is broader and not identical. It treats *epistemic constitution* as a neutral genus that can name truth-seeking and systemic-lying orders alike, and it connects that genus to Durkheimian solidarity, cultural formation, public sincerity, distributed enforcement, and the possibility of an entire society becoming organized around an authorized unreality.

2. Semantic anatomy

Epistemic **Epistemic** concerns the social production, communication, justification, testing, preservation, and correction of belief and knowledge. It includes empirical claims but is not limited to formal science. Historical

memory, testimony, journalism, professional judgment, institutional records, public explanations, causal stories, and ordinary reports of experience all belong to the epistemic life of society.

Constitution **Constitution** means the relatively durable meta-rules by which epistemic life is organized. These rules allocate permissions, burdens, protections, jurisdictions, and sanctions. They need not have been designed by one actor. They may emerge recursively from many locally rational choices and then constrain the individuals who reproduce them.

These meta-rules may govern universally at their own level while generating particular answers and bounded authorities. The full definition, concrete cases, and difficult classifications remain in [Epistemic Agency under Mechanical Solidarity](#).

The term should not be confused with **Michel Foucault's regime of truth**, developed in interviews such as "Truth and Power" in [Power/Knowledge](#), although there is an important family resemblance. Foucault directs attention to the procedures, institutions, sanctions, and authorized speakers through which statements function as true. The present concept asks the additional realist and normative question: **does that social regime preserve independent ways for reality to defeat its authorized claims?** An epistemic constitution is therefore evaluated not only by how truth-status is socially produced but by whether the resulting order remains reality-answerable.

Mechanical solidarity **Mechanical solidarity**, introduced by **Émile Durkheim** in [De la division du travail social](#), is cohesion through shared beliefs, sentiments, and the moral force of collective consciousness. Durkheim contrasts it analytically with **organic solidarity**, which arises through differentiation, specialization, and interdependence.

The present synthesis does not claim that modern society simply returns to undifferentiated mechanical solidarity. Modern society remains organically differentiated: physicians, engineers, historians, courts, laboratories, media, families, religious communities, firms, and citizens perform different functions and possess different knowledge.

Within the coordinated theory family, [Epistemic Agency under Mechanical Solidarity](#) further interprets mechanical solidarity as emergent symbolic-affective field coherence among local bigOthers, with back-action upon the people who sustain it. This document does not repeat or depend upon the physical analogies used to explain that mechanism. It takes the resulting second-order social order as its object and asks whether its epistemic constitution preserves or disables correction by reality.

Lifted **Lifted** names a proposed transformation of mechanical solidarity. Binding sameness moves from shared concrete rules and answers to a shared generator:

FIRST-ORDER MECHANICAL SOLIDARITY

members share concrete rules and answers R1, R2, R3 ...

↓ lifting

LIFTED MECHANICAL SOLIDARITY

members share fixed M; current K_t and situation C generate binding R_t(C)

Fixed means operatively installed and binding, not eternal. Generator and output belong to one operative weave. The result often has less shared concrete content and greater reach because one generator can produce many answers. It can protect pluralism by making different outputs compatible with membership. It can also synchronize a society around a closed generator whose authorized procedure controls what may count as real.

Lifted therefore describes the order at which binding sameness resides, not incomplete occupancy, weak jurisdiction, pluralism, or moral quality. A lifted program fully occupies the single slot. Its generator may govern universally at its own level even while the outputs and representatives it constitutes are bounded. It can remain open and corrigible or become closed and pathological.

The phrase **lifted mechanical solidarity** is therefore an extension of Durkheim, not a term found in his work. First-order and lifted solidarity use the same field-forming mechanism in the present theory; *lifted* means that common binding force has moved from concrete answers to their generator. The detailed definition, examples, and boundary from organic differentiation remain in [Epistemic Agency under Mechanical Solidarity](#).

At society scale, a lifted order can support **cultural interoperability**: the capacity of differentiated persons, communities, institutions, and symbolic orders to translate important meanings, recognize legitimate common procedures and jurisdictions, and coordinate required common action. This is a performance of the architecture, not the definition of lifting. [Mythology Construction](#), "Cultural interoperability and its breakdown (Babelization)" distinguishes the

meta-order’s effective thickness, its span across interfaces, and the cultural-interoperability floor (anti-Babel floor). A lifted order may be nominal rather than operative, or too thin or narrow in span to keep a society above that floor. High cultural interoperability also does not decide the separate **subjecthood-absorption** question. A universal epistemic constitution can preserve differentiated persons and bounded subordinate jurisdictions, or it can become closed and absorptive. Order level, occupancy, jurisdiction, corrigibility, interoperability, and subjecthood absorption must therefore be assessed separately.

3. Why the concept is an operating system

The operating-system metaphor identifies the level at which the concept works. An epistemic constitution does not itself contain all social knowledge. It governs how knowledge-producing and belief-forming processes obtain access, communicate, compete, record results, handle error, and recover from failure. Like an operating system, the meta-order is universal over permissions and process boundaries while the processes remain differentiated. Universality at this level does not imply one central programmer, one institutional brain, or unlimited competence for any process or administrator.

Operating-system function	Epistemic-constitutional equivalent
Kernel	Mind-independent reality and its reserved capacity to contradict every model
Permissions	Domain limits on authority; rights to question, answer, inspect, and appeal
Processes	Persons, disciplines, institutions, professions, communities, and inquiries
Interfaces	Public language, media, education, testimony, reports, debates, and records
Sensors	Observation, experience, disagreement, failed predictions, adverse outcomes, and anomalies
Logs	Provenance, evidence, decision reasons, minority reports, predictions, corrections, and institutional memory
Fault isolation	Independent sources, institutions, methods, and causal routes that reduce common-mode failure
Recovery	Retraction, reconsideration, appeal, replication, model revision, and honourable mind-changing
Resource management	Stewardship of finite public attention and resistance to informational flooding
User protection	Dignity, cognitive liberty, due process, legitimate dissent, and practical possibilities of exit

The metaphor must not imply a central programmer or a single institutional brain. The epistemic constitution is distributed. Its implementation uses several levels defined more fully in [Culture Mechanics](#) and [Epistemic Agency under Mechanical Solidarity](#):

Core construct	Limited function needed here
Lacan’s big Other	The shared symbolic order and, in the present functional translation, the on-the-wire protocol of language, law, roles, conventions, master signifiers, and recognized symbolic authority. This does not exhaust Lacan’s concept.
Local bigOther	The individual sentiment classifier that executes an installed mythological lens and makes approval, shame, legitimacy, loyalty, and exclusion affectively operative.
Mechanical-solidarity field	Emergent coherence among compatible local bigOthers that acts back through public expectations, sanctions, institutions, and apparent consensus.

Core construct	Limited function needed here
Distributed bigOther	The dynamically maintained symbolic-affective network state reproduced through local bigOthers, institutions, roles, practices, stories, and artifacts.
Multi-mind-self	The distributed system only when it becomes sufficiently integrated and continuous to qualify as a collective agent. An epistemic constitution does not require every society or institution to pass this threshold.

The spelling *bigOther* marks the culture-mechanical adaptation; it should not be attributed to Jacques Lacan. These distinctions specify the implementation interface without making the truth/systemic-lying analysis depend upon the full homo-duplex architecture, field analogies, privileged programming topology, or collective-ownership hypothesis. An epistemic constitution can be described and evaluated by its rules of authority, avowal, evidence, disagreement, memory, attention, and correction even where those deeper mechanisms remain disputed.

For the mapped features and limits of the operating-system picture, and its relationship to the framework's CPU, PCI-slot, protocol, field, laser, magnet, and braiding models, see [Analogical Models in Culture Mechanics: A Semantic Inventory](#). That optional inventory does not alter the definition or tests stated here.

The constitution is installed when people learn not only propositions but sentiments such as:

- whether asking an elementary question is responsible or insolent;
- whether disagreement signifies integrity or betrayal;
- whether checking an ally's claim is honourable or disloyal;
- whether uncertainty signifies honesty or weakness;
- whether correction earns respect or humiliation;
- whether an accusation demands evidence or immediate alignment;
- whether an institution's prestige supplements evidence or replaces it.

4. The recursive culture-mechanical cycle

The epistemic constitution forms individuals, and individuals reproduce the epistemic constitution. The causal structure is recursive:

In the core vocabulary, visible conduct is encoded through the shared symbolic protocol, reproduced as part of the distributed bigOther, and returned to persons as field back-action. The **epistemic constitution is not identical with that field**. It is the comparatively durable epistemic rule-pattern carried by the field and its institutions: which signals receive authority, which contradictions remain admissible, which memories persist, and how correction occurs.

No conspiracy is required. An epistemic constitution can arise through ordinary socialization, coordination, career incentives, reputational concern, information overload, sincere belief, institutional inertia, and people's reasonable need to rely on others. Deliberate actors can nevertheless exploit the same mechanisms.

This is why small individual acts matter constitutionally. A forwarded claim, concealed doubt, ritual affirmation, honest correction, elementary check, or refusal to repeat a statement can alter the public signal to which others respond.

5. Epistemic dependence without epistemic surrender

Modern people cannot verify everything personally. John Hardwig’s “Epistemic Dependence” argues that rational knowledge often depends essentially on other knowers. Patrick Wilson’s *Second-Hand Knowledge* explains *cognitive authority*: why some people are recognized as proper influences on what others believe. Linda Trinkaus Zagzebski’s *Epistemic Authority* develops a positive account of rational authority and epistemic preemption.

The present synthesis borrows from these sources but makes a distinction they do not formulate in this exact way:

- Reliance:** “This person’s or institution’s judgment is important evidence that I should normally weight heavily.”
- Reality-permission:** “This person’s or institution’s judgment determines which evidence I am permitted to recognize.”

The first can be rational epistemic dependence. The second is **authority-gated belief updating**, the proposed pathological term defined in *Epistemic Agency under Mechanical Solidarity* for the point at which authorization begins to govern admissibility before content is examined. This document applies that person–authority mechanism at constitutional scale; it does not redefine it.

A reality-anchored constitution does not abolish expertise. It makes authority:

- domain-limited for particular persons and institutions within the universal meta-order;
- earned and track-record-sensitive rather than purely status-conferred;
- transparent about source, method, uncertainty, and conflict of interest;
- open to criticism from independent causal routes;
- able to coordinate action without claiming ownership of empirical truth;
- corrigible without requiring institutional self-destruction.

The central constitutional maxim is:

No person or institution receives root access to reality.

This maxim limits representatives, not the scope of the constitution. Universal meta-jurisdiction determines how authority is allocated and corrected; it does not give parliament, a court, an expert body, or any other representative universal epistemic competence or the power to make reality answer to its certification.

6. Sincerity precedes collective truth-seeking

A person may sincerely express a false belief. Conversely, a person may insincerely repeat a proposition that happens to be factually correct. Public sincerity and objective truth are therefore distinct dimensions:

	Proposition tracks reality	Proposition does not track reality
Sincerely expressed	Knowledge or truth-tracking belief	Honest error
Insincerely expressed	Correct conformity or strategic assent	Deception, false compliance, or lying

The first constitutional task is not to certify the speaker’s belief as true. It is to preserve fidelity between public avowal and private judgment so society can discover what its members actually observe, believe, doubt, and misunderstand. Only then can those sincerely represented beliefs be tested against reality.

This yields a two-stage principle:

1. **Avowal fidelity:** let people truthfully say what they think is true, false, doubtful, or unknown.
2. **Reality fidelity:** expose those sincerely expressed judgments to evidence, criticism, experience, prediction, and correction.

In compact form:

Say what you actually believe; submit what you believe to reality; truthfully say what you believe after reality changes it.

Timur Kuran’s *Private Truths, Public Lies* supplies the central micro-to-macro mechanism of **preference falsification**: public expression can diverge from private preference under social pressure. His analysis also connects falsified

public performance to impoverished public knowledge and hidden political fragility. The present framework extends Kuran's problem from preferences to the broader sincerity conditions of public epistemic life.

The resulting pathological loop is:

private doubt
→ fear of reputational or material penalties
→ public conformity
→ appearance of consensus
→ stronger pressure on remaining dissenters
→ concealment of evidence and arguments
→ corruption of public knowledge
→ altered private knowledge and socialization
→ deeper conformity or an unpredictable preference cascade

Public conformity thus corrupts what may be called **public epistemic telemetry**: the signals through which society tries to perceive its own distributed observations and judgments. This expression is proposed here; it is not Kuran's term.

7. Living within the lie and ordinary participation

The systemic-lying pole is sustained not only by authors of official falsehoods. It depends upon ordinary people repeatedly acting as if the authorized representation were true.

Václav Havel's *The Power of the Powerless* describes "living within a lie": public ritual and conformity reproduce a system even when participants do not believe its claims. **Aleksandr Solzhenitsyn's** "*Live Not by Lies*" formulates the individual refusal to let organized falsehood operate through one's own speech and conduct. **Lisa Wedeen's** *Ambiguities of Domination* analyzes public dissimulation in which citizens act as if they revere claims widely understood to be fictitious. **Hannah Arendt's** essays collected in *On Lying and Politics* examine factual truth, political lying, self-deception, and organized deceit.

These authors are antecedents, not co-authors of the present term. They illuminate a constitutional principle:

A systemic lie becomes a social order when people need not believe it privately but must orient public action, speech, and status as though it were true.

Rod Dreher's *Live Not by Lies* later borrows Solzhenitsyn's title and applies lessons from Christian dissidents to his own diagnosis of contemporary soft totalitarianism. Dreher is relevant to dissident formation and the social cost of truthfulness, but neither his political diagnosis nor his theological commitments define the regime-neutral concept developed here.

8. Truth as reality's reserved right of correction

The positive pole affirms that something exists independently of authorization, discourse, and collective preference. Objective truth is the regulative target, although human access to it remains fallible, partial, socially distributed, and corrigible.

The model-centred control loop is developed in *The Normal Metaphysics and Epistemology: Holistic Structural Realism*. Its core sequence is:

experience and observation
→ concepts and operations
→ models or "digital twins"
→ predictions and interventions
→ encounter with mind-independent reality
→ surprise, error, and out-of-sample consequences
→ revision of models, concepts, or operations

The epistemic constitution generalizes this correction loop beyond formal science. Institutions, historical narratives, causal stories, policies, public accusations, and everyday beliefs must also remain exposed—by methods proportionate to their subject matter—to disconfirming evidence and real consequences.

Truth-seeking therefore does not mean that one institution already possesses Truth. It means preserving reality's ability to say **no**.

Objective truth exists, but no person or institution is identical with it; therefore the collective search for truth must remain plural, testable, and corrigible.

This is the meaning of **reality-anchored**: not that every current belief is correct, but that the social order acknowledges an external referee that cannot be finally overruled by authorization.

9. Piety toward the real

The central virtue of the positive pole is **piety toward the real**. The phrase comes from sociologist **Robert N. Bellah's** introduction to *Émile Durkheim on Morality and Society*, where Bellah characterizes Durkheim as possessing a strong "piety toward the real." It is Bellah's phrase about Durkheim, not a standard Durkheimian technical term.

The present synthesis extends it into an epistemic-constitutional virtue:

- reality is not exhausted by present concepts;
- a satisfying narrative is not sufficient evidence;
- social facts may contain structures and functions invisible to first impressions;
- preferred theories must risk predictive and explanatory failure;
- consequences and surprises can defeat authorization;
- one's own side deserves especially careful checking;
- correction is fidelity to truth rather than betrayal of identity.

Piety toward the real must be joined to Durkheim's defense of the morally sacred person in "*L'individualisme et les intellectuels*". The combined formula is a synthesis rather than a quotation from Durkheim:

Respect persons unconditionally; evaluate propositions conditionally by evidence; regulate actions through justice.

This prevents truth-seeking from becoming a license for contempt, denunciation, or coercion. Persons do not lose dignity when they are mistaken; propositions do not become true because their proponents possess dignity.

An expressive formulation of the same orientation is:

Shine the light of objective truth into subjective darkness—without appointing anyone sovereign owner of the light.

10. Communicative integrity and linguistic tricks

The epistemic constitution is enacted at the smallest scale through ordinary speech. It matters whether communication is oriented toward mutual understanding and reality or toward operative effect while preserving the appearance of communication.

This distinction resembles **Jürgen Habermas's** contrast between communicative and strategic action and his differentiation of truth, normative rightness, and sincerity as validity claims in *The Theory of Communicative Action*. The present synthesis borrows this orientation but does not adopt Habermas's entire theory or treat discursive agreement as sufficient for correspondence with reality.

The detailed micro-level taxonomy is maintained separately in *Linguistic Tricks: A Semantic Inventory*. That inventory covers the assertional, informational, semantic, dialogical, attributional, and contextual operations through which communication can obscure rather than illuminate. It also explains the relation between fallacy, sophism, sophistry, and the wider category of instrumental untruthfulness. Its entries are not reproduced here.

Constitutionally, the point is:

Repeated micro-violations of communicative integrity can accumulate into the normal language, reflexes, public narratives, and institutional practices of a systemic-lying order.

Victor Klemperer's *The Language of the Third Reich* is a major historical antecedent for understanding how repeated official vocabulary can shape categories, habits, emotions, and culture. **Harry Frankfurt's** *On Bullshit* identifies the distinct danger of communication indifferent to whether its content is true. Neither author supplies the complete category of instrumental untruthfulness used in the inventory.

11. Disagreement as social perception

A reality-anchored constitution treats consequential disagreement first as information that the social model may be incomplete—not as contamination to be removed.

Not every propositional disagreement is a conflict between mythologies. *Culture Mechanics*, “Disagreement, mythological rivalry, and ideological-form conflict,” distinguishes propositions, causal stories, classifications, informal mythological rivalry, active mythological conflict, competing governing programs, and organized ideological-form conflict. This constitution is concerned with the correction route across all of them. **Rival-signal suppression** becomes constitutionally dangerous when censorship, channel exclusion, or synchronized institutional classification removes a competing claim before independent judgment can inspect it. The suppressed signal may be wrong, but it may also contain independent evidence, minority perception, or an internal correction.

The proposed **disagreement sensor** performs a limited function:

“A consequential disagreement exists. Here are the rival propositions and their actual proponents.”

It does not determine which side is true. Its positive institutional expression is a deliberately simple **public contestability infrastructure**:

```
DETECT A CONSEQUENTIAL DISAGREEMENT
      ↓
OFFER ITS PROPONENTS AN EQUAL PUBLIC STAGE
      ↓
ENABLE DISTRIBUTED PUBLIC OPINION-FORMATION
      ↓
PRESERVE THE EXCHANGE AND REOPEN IT WHEN REALITY ADDS EVIDENCE
```

The institution is a public sensor, stage, and memory—not a public brain. It performs three primary operations.

11.1 Detect: make the disagreement publicly legible Candidate disagreements can enter through two simple routes:

- **open registration:** anyone may point to two consequential, genuinely incompatible public claims and request that they be placed on a visible public list;
- **attention monitoring:** widely circulating contradictory claims—including claims found in trending social-media posts—can trigger an invitation without any judgment that either claim is respectable or true.

The sensor translates a conflict among persons, affiliations, slogans, or posts into a conflict among propositions. For example:

Claim A: X is the principal cause of Y.

Claim B: X is not the principal cause of Y; Z is.

Consequences: the disagreement materially affects policy or public conduct.

Proponents: A1 and B1, or representatives selected by them.

The public list should show the proposed wording, why the claims conflict, their public reach or consequence, who has been invited, who has accepted or declined, and when the exchange will occur. Where demand exceeds available stage time, published queues, rotation, or lottery are preferable to an opaque judgment about which position deserves attention. Detection establishes only that **a disagreement exists and matters**. It confers neither truth nor moral endorsement.

11.2 Stage: expose the rival propositions to one another and to everyone The paradigm is television-style in reach, immediacy, and intelligibility to ordinary viewers—not an expert-only institutional process—but without television’s declaration that one participant has “won.” Its minimal form is:

1. State the opposing propositions plainly and publish the agreed or disputed wording.
2. Give the actual proponents, or representatives chosen by them, equal standing and time.
3. Allow each side to present its own positive case rather than merely answer an opponent’s framing.
4. Permit direct questions, answers, rebuttals, and concessions under transparent rules.
5. Display the sources and evidence invoked so viewers can inspect them.
6. Broadcast the complete exchange live or with equivalent mass accessibility.
7. Preserve an unedited recording, searchable transcript, source list, and any explicit predictions or unresolved cruxes.
8. Let no moderator, panel, fact-checking office, audience poll, or institution declare a winner.

9. Leave every position open to later challenge and renewed debate.

The moderator is a custodian of equal opportunity, relevance, answerability, and accurate representation—not a sovereign certifier of truth. The moderator enforces time and speaking rules, prevents interruption, keeps the exchange on the stated propositions, and ensures an opportunity to answer allegations. Fact verification remains useful for authenticating documents, quotations, dates, calculations, and provenance, but it is an instrument available to public inquiry rather than an authority standing above it.

11.3 Public group opinion-making: judgment without an institutional judge After the stage has supplied a common encounter, each observer forms a provisional opinion. Viewers can compare reasons, inspect the displayed sources, discuss the arguments with others, notice different evasions or contradictions, and revise their judgments. People with relevant experience can add observations and counterevidence. Later events can reopen the same disagreement.

The resulting **public group opinion** is not a verdict issued by the hosting institution. It is the changing distribution of many individual judgments after exposure to the same strongest available opposing cases. A poll may describe that distribution, but it must not manufacture an epistemic winner or imply that a majority vote creates truth.

The hoped-for group advantage comes from distributed perception: different observers notice different factual errors, missing premises, rhetorical evasions, trade-offs, and connections to experience. It depends upon access to the full exchange, diversity of perspective, and sufficient independence of judgment. If social pressure tells everyone in advance what a respectable person must conclude, the crowd ceases to supply meaningfully independent observations.

Truth therefore functions as a **centre of gravity**, not as a democratic product. Neither the institution nor the majority owns truth. The institutional contribution is to place rival claims in shared light so dispersed human judgment—and eventually further evidence from reality—can act upon them.

The compact constitutional form is:

Detect disagreement → offer an equal public stage → let public opinion form from independent judgments → preserve the record → reopen the question when argument, evidence, or reality warrants it.

11.4 Concrete prior art—and the missing integration Several existing institutions demonstrate parts of this mechanism:

Prior art	Relevant contribution	Difference from the proposed constitutional organ
DEBATECON / Modern-Day Debate	A flagship in-person conference within a self-described neutral platform that brings opposing positions into public debates on religion, politics, and science. It demonstrates the uncensored, symmetrical public stage.	It supplies the stage, but its published format is not organized around a permanent open process for detecting, registering, and revisiting consequential disagreements.
Open to Debate —formerly Intelligence Squared U.S.	Precisely framed motions, opposing sides, structured exchanges, mass distribution through broadcast and online media, and a large public archive. Its Oxford-style format gives both sides equal opportunity and polls the audience before and after.	It declares the side producing the greatest audience shift the winner. The proposed organ retains the motion, symmetry, and broadcast reach but treats opinion change only as descriptive public telemetry, not a truth criterion or victory condition.
The Soho Forum	Public one-on-one Oxford-style debates around a clearly stated resolution, with direct engagement, audience questions, livestreaming, and preserved recordings. It demonstrates sustained proposition-versus-proposition confrontation rather than short panel sound bites.	It also defines victory through movement in the audience vote. Its topic selection is producer-driven rather than the output of an open disagreement sensor.

Prior art	Relevant contribution	Difference from the proposed constitutional organ
Braver Angels Debates	A structured, non-punitive ethos in which participants articulate what they actually believe, may express nuance or uncertainty, and seek greater understanding rather than vanquishing an opponent.	It supplies part of the sincerity and disagreement ethos, but is designed principally as participatory small-group conversation rather than mass-broadcast public evidence testing.

These comparisons concern the organizations' published formats; they do not imply that the organizations have never experimented with other elements. Their contributions are complementary:

DEBATECON supplies the open conference stage; Open to Debate supplies the formal motion and mass-broadcast form; the Soho Forum supplies sustained direct engagement; Braver Angels supplies part of the non-punitive ethos. The proposed public contestability infrastructure joins these to an open disagreement sensor, distributed public judgment without an official winner, preserved evidence, and renewed correction.

The distinctive integration lies before and after the event. Existing debate producers ordinarily choose a topic and then stage it. A disagreement-sensing constitutional organ makes the detection and fair public processing of emerging consequential disagreement itself a continuing social function. After the event, it preserves the question rather than closing it with a winner.

This procedure can borrow rules from **Frans H. van Eemeren and Rob Grootendorst's** [pragma-dialectical theory of critical discussion](#). The borrowing is partial. Pragma-dialectics supplies procedures for reasonably resolving differences of opinion; the epistemic constitution adds the external requirement that even procedurally reasonable conclusions remain answerable to evidence and reality.

The institution is deliberately not a centralized public brain:

The institution detects and stages disagreement. The public judges. Reality decides over time.

Distributed judgment can outperform centralized judgment when observers contribute genuinely different information, perspectives, and heuristics. **Lu Hong and Scott Page's** conditional result in "[Groups of Diverse Problem Solvers Can Outperform Groups of High-Ability Problem Solvers](#)" is a relevant formal antecedent, but it must not be inflated into the claim that every crowd is wise. Diversity, sufficient competence, independence, information access, and correction are enabling conditions. A synchronized crowd can amplify shared error.

12. Epistemic stewardship and responsible amplification

The individual-level virtue corresponding to public contestability is **epistemic stewardship**, with **responsible amplification** as its everyday practice. Both expressions are proposed terms in this synthesis.

Epistemic stewardship is the disposition to treat one's power to transmit claims and allocate other people's attention as a responsibility.

Its operational rule is:

Verify, qualify, or withhold.

Before forwarding a consequential claim, a person performs the simplest competent check proportionate to its reach and possible harm. This can include reading beyond a headline, identifying the original proposition, checking the date and context, following the source chain, reproducing an elementary calculation, looking briefly for serious counterevidence, and distinguishing observation, inference, prediction, opinion, and satire.

Nobody can verify everything. *Qualify* therefore matters. A person may say, "I have not verified this; I am sharing it as a question that deserves examination." The constitutional failure occurs when uncertainty is silently converted into assertion and transferred to others as if someone upstream had checked it.

Forwarding is not merely self-expression:

To amplify a claim is to vote for what the collective mind will attend to.

The reality-anchored cultural mapping is:

checking before amplification → responsibility
 checking one's own side → integrity
 marking uncertainty → honesty
 refraining from noise → attentional restraint
 correcting one's own claim → honour
 careless repeated forwarding → unreliability

This should remain a virtue and shared yardstick rather than an official score, badge, or permission system. An agency-supporting mechanical-solidarity field can make stewardship honourable through local bigOthers; it must not convert the norm into an epistemic police force or grant one institution custody of reality.

13. Low-cost contradiction, not low-cost condemnation

Protecting truthful disclosure does not justify converting anonymous reporting into a system of denunciation. A reality-anchored constitution distinguishes:

- **contradicting a claim, model, record, policy, or prediction**, which should be inexpensive and widely accessible; from
- **accusing a person in a process capable of imposing serious reputational, professional, legal, or social consequences**, which must be precise, evidentially grounded, and procedurally constrained.

The compact rule is:

Make contradiction cheap; make evidence preservable; make accusations precise; make investigation independent; make sanctions procedurally demanding; make institutional error repairable.

This is the constitutional answer to the moralization mechanism developed in [Culture Mechanics](#). Drawing on Michael Andrick, that account shows how an exchange can move simultaneously from the issue to the person's character and from inquiry to accusation, so that a statement, omission, association, missing conformity signal, imposed marker, or attributed target label becomes an alleged disclosure of an unbearable person. The present section does not reproduce that mini-theory; it specifies the institutional barrier against turning such a character accusation directly into lost civic standing or punishment.

An anonymous discrepancy report may legitimately trigger evidence preservation, an audit, or investigation. It must not itself count as evidence of guilt. Person-directed proceedings require, in proportion to their consequences:

- specification of the alleged act and applicable rule;
- preservation and disclosure of the substance of the evidence;
- an opportunity to answer and present contrary evidence;
- separation of reporting, investigation, adjudication, and sanction;
- an explicit standard of proof and reasoned decision;
- proportionality, independent appeal, correction, and repair after error.

Due process is not only mercy toward an accused person. It is an error-correction technology. The [EU Whistleblower Directive](#), for example, couples reporter protection with protections for the implicated person's identity, presumption of innocence, right to be heard, access to the file, and effective remedy. The epistemic-constitutional principle is broader than that particular legal instrument.

A systemic-lying constitution tends to reverse the proper cost structure:

contradicting an authorized proposition → expensive
 accusing a designated opponent → cheap

A reality-anchored constitution reverses that reversal:

challenging claims → easy
 condemning persons without tested proof → difficult

14. Memory, provenance, and correction

Collective memory is part of the epistemic constitution because present judgment depends upon the evidence, alternatives, predictions, failures, and earlier dissent that the public record preserves.

A reality-anchored order records:

- original sources and source chains;

- the evidence and uncertainty available when decisions were made;
- who exercised which authority and within what jurisdiction;
- reasons, predictions, and expected consequences;
- objections and minority analyses;
- subsequent outcomes, failed replications, corrections, and reversals.

A systemic-lying order instead edits memory so that the authorized account appears always to have been obvious, unanimous, successful, and morally uncontested. Past predictions disappear; failures are renamed; dissenters become invisible or retroactively illegitimate; and later generations inherit no vocabulary or evidence with which to reconstruct the excluded alternative.

Correction therefore has both present and historical forms. Retraction without preserved provenance can become another memory hole. A healthy constitution makes correction visible while retaining enough of the error history for later institutional learning.

The two endpoints and the tension space between them

15. The spectrum is real but multidimensional

The two endpoints are **ideal types**: analytically clarified limiting configurations, not claims that any whole society perfectly instantiates either one. Every actual constitution is mixed. A laboratory may be highly reality-responsive while its personnel process is denunciatory; a government may preserve due process while manipulating public statistics; a dissident community may protect sincerity while installing a rival, closed epistemic authority.

The tension space is therefore multidimensional rather than a single scalar score. Nevertheless, the poles specify genuine directional oppositions. On each relevant dimension, preserving a stronger route of independent correction weakens the corresponding mechanism of systemic lying, while increasing authority-gating, compelled performance, memory control, or semantic manipulation weakens collective corrigibility.

Dimension	Reality-anchored, truth-seeking pole	Systemic-lying pole
Ontological premise	Mind-independent reality can resist every account	Authorized representation determines socially admissible reality
Epistemic aim	Active truth-seeking and improving truth-tracking	Operative effectiveness, loyalty, control, or preservation of the system
Public avowal	Belief, doubt, uncertainty, and revision may be sincerely expressed	Performative conformity is safer than honest expression
Authority	Universal corrigible meta-jurisdiction with plural, transparent, defeasible, and bounded representatives	Representatives monopolize the meta-order, become self-certifying or preemptive, and spill beyond allocated jurisdiction
Evidence	Content and provenance remain independently inspectable	Authorization controls admissibility and weight before examination
Disagreement	A social sensor and legitimate route to correction	A sign of ignorance, contamination, disloyalty, or danger
Discussion	Opposing propositions receive a visible and equal stage	Deplatforming, weak opponent selection, ritual consultation, or authorized verdict
Correction	Mind-changing, retraction, and concession can be honourable	Correction threatens status; failures are denied, renamed, or forgotten
Public telemetry	Visible speech approximately represents distributed judgment	Preference and knowledge falsification manufacture apparent consensus
Language	Meanings and burdens remain explicit and contestable	Linguistic tricks, euphemism, semantic drift, and sophistry steer interpretation
Attention	Responsible amplification and prioritization of consequential disagreement	Flooding, outrage competition, repetition, and noise exhaust checking capacity

Dimension	Reality-anchored, truth-seeking pole	Systemic-lying pole
Memory	Provenance, predictions, dissent, and correction histories are preserved	Records are selectively erased, rewritten, or detached from context
Person-directed accusation	Precise allegations, tested evidence, due process, appeal, and repair	Cheap denunciation, vague charges, asymmetric secrecy, and irreversible stigma
Institutional structure	Independent causal routes reduce common-mode failure	Synchronization makes nominally separate bodies reproduce one protected account
Membership	Persons retain dignity while claims remain conditional	Belonging, virtue, and factual assent become fused
Everyday participation	Members check, qualify, dissent, and correct	Members forward, conceal, perform, sanction, and normalize the authorized account

16. Reality-anchored, truth-seeking epistemic constitution

reality-anchored, truth-seeking epistemic constitution *noun phrase* **Status:** positive ideal type and proposed synthetic term

Short definition A reality-anchored, truth-seeking epistemic constitution is a social meta-order that affirms mind-independent reality, protects sincere expression and visible disagreement, organizes a plural search for objective truth, and preserves independent routes by which persons, claims, authorities, institutions, memories, and policies can be corrected.

It is a full lifted capture and a universal meta-order. Its reality-anchoring lies not in incomplete authority but in binding corrigibility: no authorized interpreter receives epistemic sovereignty, and independent reality retains the final right of refusal.

Constitutive properties Its defining properties are:

1. **Realism:** something exists independently of authorization and collective preference.
2. **Fallibilism:** every human model and authority may be mistaken.
3. **Truth-seeking:** inquiry actively attempts to discover what is the case rather than merely professing respect for truth.
4. **Truth-tracking:** the order evaluates whether its procedures actually improve prediction, explanation, and contact with evidence.
5. **Public avowal integrity:** people can express belief, doubt, ignorance, and revision without being required to falsify their judgment.
6. **Open contestability:** consequential disagreements remain visible and their serious proponents receive standing to defend them.
7. **Corrigible dependence:** expertise and institutions remain indispensable but defeasible, externally auditable, and limited to jurisdictions allocated by the universal meta-order.
8. **Plural correction routes:** independent sources, methods, institutions, and observers reduce synchronized error.
9. **Communicative integrity:** language facilitates shared examination rather than covertly substituting operative effect for truth.
10. **Epistemic stewardship:** individuals treat amplification and collective attention as responsibilities.
11. **Due process:** contradiction is inexpensive, while consequential condemnation requires tested evidence and remedy.
12. **Honourable correction:** admitting error and changing one's mind are signs of fidelity rather than humiliation.
13. **Moral individualism:** persons retain unconditional dignity while propositions receive conditional confidence.

Its lifted mechanical solidarity is not agreement on a comprehensive worldview. It is shared honour around the conditions under which disagreement remains truth-seeking:

People like us say what we actually believe, examine what we most want to believe, give opponents a fair hearing, preserve evidence, and let reality correct us.

17. Systemic-lying epistemic constitution

systemic-lying epistemic constitution *noun phrase* **Status:** pathological ideal type and proposed synthetic term

Short definition A systemic-lying epistemic constitution is a social meta-order in which public communication, institutional authority, social incentives, language, memory, and routine participation are organized to reproduce an authorized representation of reality while sincere avowal, contradictory evidence, genuine disagreement, and independent correction are suppressed, distorted, ritualized, or made prohibitively costly.

It too is a full lifted capture and a universal meta-order. Its pathology lies in how its representatives and rules monopolize interpretation, block succession and correction, and make reality answerable to authorization—not in the mere fact that one second-order order governs society-wide jurisdiction rules.

Constitutive properties Its defining properties include:

1. **Reality substitution:** the authorized model acquires priority over what observation, prediction, and consequence reveal.
2. **Public-private divergence:** people learn to say what participation requires rather than what they believe.
3. **Ritualized assent:** performance matters more than private conviction; visible compliance confirms the system.
4. **Authority-gated updating:** source authorization determines whether evidence may count.
5. **Asymmetric epistemic permeability:** in-group claims enter easily; inconvenient evidence faces exceptional burdens.
6. **Conflation of loyalty and truth:** disagreement becomes betrayal, impurity, danger, or moral defect. This is semantic and institutional conflation, not by itself subjecthood absorption (fusion).
7. **Institutional synchronization:** nominally independent institutions reproduce the same classifications and common-mode failures.
8. **Semantic capture:** words, frames, causal stories, and moral labels preselect what can be perceived, blamed, or remedied.
9. **Attention exhaustion:** flooding and repetitive low-cost claims reduce society's capacity to identify and examine important disagreements.
10. **Denunciatory enforcement:** accusations against designated persons become cheap while contradiction of authorized claims becomes costly.
11. **Memory control:** failed predictions, dissent, alternative explanations, and earlier meanings disappear from the usable record.
12. **Self-sealing correction:** the institution defines criticism as proof of hostility and failure as evidence that more commitment is needed.
13. **Distributed reproduction:** ordinary people become the execution layer by forwarding, concealing, performing, rewarding, and sanctioning.

The word **lying** is broad at this pole. A systemic-lying constitution need not consist entirely of consciously false sentences. It may contain:

- true statements selected to produce a false overall model;
- sincere believers repeating culturally installed errors;
- officials indifferent to truth rather than privately certain of falsity;
- accurate propositions repeated insincerely as rituals of submission;
- euphemisms, implications, omissions, presuppositions, frames, and classifications that evade literal falsehood;
- institutions that preserve local accuracy while protecting a globally misleading narrative.

The constitutional scale can therefore include organized control of the **reconstruction pipeline**, not only organized production of false sentences:

admissible event model

↓ compressed through approved vocabulary, omissions, and sequence

trusted speakers and institutions repeat the compressed form

↓

installed recipient codebooks supply the expected decompression

↓

ordinary participants may sincerely reconstruct and enforce the authorized model

↓

alternative decompressions are marked ignorant, immoral, or inadmissible

Epistemic Agency under Mechanical Solidarity, “Audience-modelled reconstruction and decompression” defines the person-to-message mechanism and decompression audit. The constitutional claim is narrower than an intent attribution: no conscious liar is required at every node, and the same communication tools can serve honest compression when uncertainty, alternatives, and correction remain available.

What makes the constitution systemic-lying is not the falsity of every component. It is the organization of the whole order against independent correction.

18. Intermediate and mixed constitutions

Everything between the endpoints consists of partial, unstable, and domain-specific combinations. Useful intermediate descriptions include:

- **truth-professing but weakly truth-tracking:** truth is praised, but predictions, audits, and correction records are poor;
- **procedurally open but socially punitive:** formal speech rights exist, but dissent carries severe informal costs;
- **sincere but reality-detached:** people speak honestly, yet inquiry lacks adequate evidence, method, or willingness to revise;
- **technically accurate but publicly insincere:** institutions possess good local knowledge while requiring ritual public assent;
- **plural but authority-gated:** several institutions exist, yet all depend on the same source, incentives, or master classification;
- **dissident but closed around successor gatekeepers:** an alternative community protects disagreement from the mainstream while its own gatekeepers preempt symmetric evaluation and correction; rivalry alone is not the pathology;
- **corrigible in ordinary cases but closed around sacred claims:** correction works until identity-defining propositions are threatened;
- **transparent but denunciatory:** records are available, yet person-directed accusation lacks symmetrical due process;
- **free-speaking but attention-corrupted:** no one is formally silenced, but flooding and algorithmic competition bury consequential disagreement.

This prevents a simplistic classification of whole societies as “truthful” or “lying.” The analytical question is always: **which mechanisms on which dimensions currently control the correction loop?**

19. Movement within the tension space

Movement toward the reality-anchored pole occurs when a system:

- reduces the penalty for sincere uncertainty and disagreement;
- separates personal dignity from propositional correctness;
- makes claims rather than enemies the primary unit of dispute;
- opens evidence and provenance to independent inspection;
- limits authority by domain and separates coordination from truth certification;
- creates independent correction routes and preserves minority analyses;
- stages consequential disagreements without issuing an institutional winner;
- records predictions and revisits them after outcomes occur;
- makes correction, appeal, and institutional repair visible;
- installs epistemic stewardship as an admired everyday virtue.

Movement toward the systemic-lying pole occurs when a system:

- makes public performance increasingly independent of private judgment;
- treats consensus as evidence even when expression is pressured;
- conditions admissibility on institutional or identity authorization;
- fuses moral worth, belonging, and factual assent;
- closes or synchronizes nominally independent sources;
- substitutes labels, frames, and accusations for examination;
- makes contradiction costly and condemnation cheap;
- overwhelms attention with untested claims;
- erases failed predictions and embarrassing evidence;
- rewards participants for reproducing the authorized account.

Because the cycle is recursive, early changes can compound. Sincere dissent makes disagreement visible; visible disagreement reduces isolation; reduced isolation lowers the cost of further sincerity. Conversely, public conformity creates apparent consensus; apparent consensus increases deference; deference strengthens authorities able to impose further conformity.

The two poles must therefore be kept together conceptually. Each positive safeguard is intelligible partly as the reversal of a negative mechanism, and each negative mechanism can be diagnosed by identifying the route of correction it disables.

Normative and diagnostic summary

20. Core constitutional principles

1. **Reality exists independently of social authorization.**
2. **No individual or institution is identical with objective truth.**
3. **Sincere avowal is the social starting condition of collective inquiry, not proof of correctness.**
4. **Epistemic dependence is unavoidable; epistemic sovereignty is not.**
5. **A lifted constitution shares rules that generate, select, apply, and revise concrete answers; it may govern universally while producing bounded first-order jurisdictions.**
6. **Disagreement is information before it is pathology.**
7. **Contradiction should be inexpensive; condemnation should require evidence and due process.**
8. **Publicity should expose opposing propositions, not appoint an official winner.**
9. **Independent correction routes are constitutional infrastructure.**
10. **Attention is a finite epistemic commons.**
11. **Correction and mind-changing should carry honour rather than shame.**
12. **Persons deserve unconditional dignity; propositions deserve confidence proportionate to evidence.**
13. **Reality retains the final right of refusal.**

21. Diagnostic questions

- Can a person publicly say “I doubt,” “I do not know,” or “I changed my mind” without losing ordinary membership?
 - Does public speech plausibly reveal private judgment, or mainly the anticipated cost of expression?
 - Are authorities trusted because of inspectable competence and performance, or because their authorization decides admissibility?
 - Can an inexpensive direct check defeat an authorized claim?
 - Are identical claims judged differently under friendly and hostile branding?
 - Are important disagreements made visible with their strongest genuine proponents?
 - Does a moderator preserve symmetry or issue epistemic verdicts?
 - Are evidence, provenance, uncertainty, predictions, dissent, failures, and corrections preserved?
 - Can institutions admit error without redefining the error or punishing the person who exposed it?
 - Do nominally independent institutions rely on genuinely independent causal routes?
 - Is checking one’s own side honoured more than rapidly forwarding its claims?
 - Does an anonymous report trigger investigation or function as proof of guilt?
 - Are accusations precise, answerable, appealable, and repairable after error?
 - Does the language of care, safety, justice, science, tradition, or freedom open inquiry or terminate it?
 - What observation would make the dominant model lose confidence?
 - Who, if anyone, has been granted practical power to overrule reality?
 - Do participants share concrete rules and answers, or the rules that generate, select, apply, and revise them?
 - Which meta-rules govern the creation, allocation, limitation, interaction, succession, appeal, and correction of the first-order outputs or jurisdictions at issue?
 - Is a particular person or institution being called “universal” when only the lifted constitution has universal jurisdiction at its own level?
 - Is the constitution first-order or lifted, is the slot fully occupied, and are its rules and representatives corrigible?
- These are separate questions.

22. Compact formulas

Neutral genus:

epistemic constitution = the operative social meta-order governing authority, avowal, evidence, disagreement, memory, attention, and correction

Order and jurisdiction:

full lifted capture → fixed M + current K_t + situation C → binding R_t(C); where M governs universally, it can constitute, allocate, limit, succeed, and correct first-order jurisdictions while representatives receive no root access to reality

Positive pole:

sincere avowal → visible disagreement → plural inquiry → encounter with reality → correction → sincere revised avowal

Negative pole:

social pressure → public performance → apparent consensus → authority-gated knowledge → suppressed correction → organized unreality

Reconstruction-pipeline capture:

authorized event model → approved compression → trusted repetition → installed decompression → sincere reconstruction and enforcement → alternative models punished

Individual virtue:

verify, qualify, or withhold

Public contestability:

the institution detects and stages disagreement; the public judges; reality decides over time

Moral rule:

respect persons unconditionally; evaluate propositions conditionally by evidence; regulate actions through justice

Ultimate contrast:

A reality-anchored constitution preserves reality's right to correct society. A systemic-lying constitution grants society's authorized representatives the right to correct reality.

Terminological provenance and boundaries

23. Established concepts retained substantially in their source sense

- **Mechanical and organic solidarity** — Émile Durkheim: *De la division du travail social*.
- **Epistemic dependence** — John Hardwig: "Epistemic Dependence".
- **Cognitive authority** — Patrick Wilson: *Second-Hand Knowledge*.
- **Epistemic authority and preemption** — Linda Trinkaus Zagzebski: *Epistemic Authority*.
- **Epistemic vigilance** — Dan Sperber, Fabrice Clément, Christophe Heintz, Olivier Mascaro, Hugo Mercier, Gloria Origgi, and Deirdre Wilson: "Epistemic Vigilance". The present synthesis uses their account of vigilance toward communicated information without assuming that individual vigilance alone can repair a systemic order.
- **Preference falsification** — Timur Kuran: *Private Truths, Public Lies*. The present synthesis generalizes the problem from preference expression to public avowal and epistemic telemetry.
- **Living within the lie** — Václav Havel: *The Power of the Powerless*.
- **Refusal to participate in lies** — Aleksandr Solzhenitsyn: "Live Not by Lies".
- **Public dissimulation and acting "as if"** — Lisa Wedeen: *Ambiguities of Domination*.
- **Political lying and factual truth** — Hannah Arendt: *On Lying and Politics*.
- **Language as culture-forming political medium** — Victor Klemperer: *The Language of the Third Reich*.
- **Critical discussion** — Frans H. van Eemeren and Rob Grootendorst: *Argumentation, Communication, and Fallacies*.

24. Borrowed concepts deliberately extended or modified here

Term used here	Source	Difference in the present synthesis
Lifted mechanical solidarity	Durkheim's mechanical solidarity, as extended in <i>Epistemic Agency under Mechanical Solidarity</i>	Moves common binding force from concrete rules and answers to rules that generate, select, apply, and revise them while retaining the same proposed field-forming mechanism. Plural first-order lives are a possible result, not the definition. <i>Lifted</i> is not Durkheim's term.
Lacan's big Other as shared symbolic protocol	Lacan's locus of language, law, and symbolic authority	"On-the-wire protocol" is the functional translation defined in <i>Culture Mechanics</i> , not Lacan's definition or a complete exegesis.
Local bigOther	Lacan's big Other, operationally adapted in <i>Culture Mechanics</i>	Names the individual sentiment classifier executing the mythological lens. It is neither Lacan's symbolic order nor a synonym for the distributed bigOther.
Mechanical-solidarity field and distributed bigOther	Durkheim's mechanical solidarity and Lacan's big Other, synthesized in <i>Epistemic Agency under Mechanical Solidarity</i>	Distinguishes emergent field coherence from the dynamically maintained symbolic-affective network state. These are project-developed extensions, not source-author terminology.
Multi-mind-self	Group-person and group-agency neighbours synthesized with culture mechanics in <i>Epistemic Agency under Mechanical Solidarity</i>	Names only a distributed system integrated enough to qualify as a continuing collective agent; it is not required for the definition of an epistemic constitution.
Piety toward the real	Robert Bellah's characterization of Durkheim	Converts Bellah's descriptive phrase into an explicit norm of epistemic and institutional model correction.
Epistemic constitution	Neighbouring use in Jonathan Rauch's <i>constitution of knowledge</i> and broader social epistemology	Makes the term a neutral genus spanning both truth-seeking and systemic-lying social orders and joins it to lifted solidarity and culture mechanics. No claim of first use is made.
Public avowal integrity	Kuran's preference falsification and Havel's living within the lie	Extends private-public fidelity from preferences and dissident ethics to belief, doubt, uncertainty, and revision across public epistemic life.
Communicative integrity	Habermas's communicative action and validity claims; pragma-dialectical critical discussion	Adds explicit reality-answerability and a broader inventory of semantic, contextual, and systemic failure modes.
Reality correction loop	Holistic structural realism; fallibilist and scientific model testing	Generalizes model-prediction-surprise-revision beyond formal science to institutions, narratives, policies, and public knowledge.

25. Newly proposed terms and formulations

The following are proposed within the coordinated theory project. Some originate in the preceding entries and are applied rather than redefined here. They should not be attributed to Durkheim, Lacan, Bellah, Rauch, Kuran, Havel, Solzhenitsyn, Arendt, Wedeen, Habermas, or van Eemeren and Grootendorst unless a later independent source establishes otherwise:

- **epistemic constitution of lifted mechanical solidarity** in the exact sense defined here;
- **first-order full capture, lifted full capture**, the distinction between shared answers and a shared answer generator, and **universal jurisdiction over the allocation and limitation of first-order outputs and jurisdictions**, inherited from the coordinated theory project and applied constitutionally here;
- **reality-anchored, truth-seeking epistemic constitution**;
- **systemic-lying epistemic constitution**;
- **public epistemic telemetry**;
- **public avowal integrity** as defined here;
- **authority-gated belief updating** and **reality-permission**, inherited from *Epistemic Agency under Mechanical Solidarity* and applied at constitutional scale here;
- **disagreement sensor** and **public contestability infrastructure**;
- **epistemic stewardship** and **responsible amplification**;
- **verify, qualify, or withhold** as the stewardship formula;
- the maxim **no person or institution receives root access to reality**;
- the combined tension-space model joining all of these concepts.

26. Scope cautions

1. **The framework is not anti-institutional.** Modern knowledge requires institutions and rational epistemic dependence. The pathology is monopoly, opacity, spillover, preemption, synchronized error, and resistance to correction.
2. **It is not epistemic individualism.** Personal checking is proportionate and domain-sensitive. Elementary verification supplements rather than abolishes expertise.
3. **It does not identify sincerity with truth.** Honest error remains error; correct conformity remains socially fragile if nobody may express why they disagree.
4. **It does not identify consensus with truth.** Consensus can be evidence when expression is free and routes are independent; it can be manufactured telemetry when expression is pressured.
5. **It does not identify disagreement with truth.** Contrarianism may be governed by a closed or preemptive successor authority. Rivalry alone is not the defect; disagreement initiates examination but does not settle it.
6. **It does not authorize a ministry of truth.** Reality-anchoring denies final epistemic sovereignty to every institution, including institutions established in the name of truth.
7. **It does not treat every social construction as false.** Law, money, office, promise, jurisdiction, and dignity are socially constituted yet real in their operation. Empirical assertions about them and their consequences remain testable.
8. **It does not require certainty before action.** Decisions under uncertainty still consider probability, severity, justice, reversibility, and the costs of action and inaction.
9. **It does not assume deliberate conspiracy.** Systemic lying can emerge through sincere belief, conformity, dependency, attention dynamics, and institutional self-protection, although it can also be strategically exploited.
10. **It is not a partisan classification.** The same criteria apply to governments and dissidents, majorities and minorities, scientific institutions and countercultures, religious and secular communities, allies and opponents.
11. **It does not depend upon the strongest collective-mind claims of culture mechanics.** The constitutional distinction can be applied by inspecting authority, avowal, evidence, disagreement, attention, memory, and correction even if the multi-mind-self threshold, privileged programming topology, or physical field analogies remain disputed.
12. **It does not define lifting as pluralism.** A lifted order is defined by its shared answer generator. That generator may have universal jurisdiction and produce plural, domain-limited authorities; universal meta-jurisdiction is not epistemic sovereignty because no representative may determine what reality is permitted to be.

Final semantic summary

- **Broader class:** society-wide epistemic and cultural meta-order.
- **Central object:** the relationship among reality, private judgment, public avowal, authority, evidence, disagreement, attention, memory, and correction.
- **Social form:** lifted mechanical solidarity—shared rules for generating, selecting, applying, and revising concrete answers—coexisting here with organic differentiation.
- **Society-wide performance:** operative lifted solidarity can support cultural interoperability above the anti-Babel floor; thickness and span describe that performance without redefining the order level.
- **Independent person–collective question:** high interoperability does not establish subjecthood absorption (fusion), and differentiated unity does not require identical first-order answers.

- **Slot occupancy:** reality-anchored and systemic-lying constitutions are both full lifted captures; full occupancy does not decide epistemic quality.
- **Jurisdictional form:** the lifted generator can govern universally while constituting, allocating, limiting, coordinating, and governing the succession and correction of first-order outputs and jurisdictions.
- **Authority boundary:** persons and institutions remain plural and domain-limited beneath the meta-order and receive no root access to reality.
- **Core-theory interface:** local bigOthers communicate through a shared symbolic protocol and help maintain a mechanical-solidarity field and distributed bigOther; a multi-mind-self is possible but not required.
- **Implementation:** formal institutions plus distributed cultural programming, incentives, language, habits, reciprocal social enforcement, and field back-action.
- **Starting predicament:** unavoidable epistemic dependence.
- **Positive endpoint:** reality-anchored, truth-seeking epistemic constitution.
- **Negative endpoint:** systemic-lying epistemic constitution.
- **Positive central virtue:** piety toward the real.
- **Positive interpersonal condition:** sincere avowal without immunity from correction.
- **Positive public mechanism:** visible, equal, non-sovereign staging of consequential disagreement.
- **Positive individual virtue:** epistemic stewardship in amplification.
- **Central negative recursion:** conformity → apparent consensus → deference → knowledge corruption → deeper conformity.
- **Reconstruction-pipeline pathology:** systemic lying can govern selection, compression, trusted repetition, recipient decompression, and the admissibility of alternative reconstructions without requiring a consciously false sentence at every node.
- **Central institutional pathology:** authority-gated belief updating and self-protected correction failure.
- **Micro-level mechanisms:** cross-referenced in [Linguistic Tricks: A Semantic Inventory](#).
- **Governing question:** Does society's authorization provide corrigible routes toward reality, or does authorization determine what reality is permitted to be?

Linguistic Tricks: A Semantic Inventory

Status: Working, source-backed inventory

Scope: Linguistic mechanisms discussed in the private source-development material; source filenames and links are withheld from this publication

Purpose: A component of the reality-anchored, truth-seeking epistemic constitution described in 0010-culture-mechanics.semantic and 0020-epistemic-agency.semantic-definition.md

1. Working concept

The reviewed source material uses *linguistic tricks* as a practical name for sophisticated forms of lying and truth-obscuring speech. The best analytical umbrella recovered during source development is **instrumental untruthfulness** (*instrumentelle Unwahrhaftigkeit*): communication governed primarily by the effect it is meant to produce rather than by truth, accuracy, sincerity, shared meaning, or reasonable resolution of disagreement.

This inventory therefore uses *lie* in a broad normative sense. An utterance need not contain a literally false sentence to belong here. It can mislead by omission, implication, presupposition, redefinition, framing, diversion, attribution, contextual manipulation, or corruption of the dialogue itself.

The family resemblance is:

A linguistic trick subordinates one or more truth-supporting conditions of communication to operative effectiveness while preserving enough of the appearance of communication to steer an audience.

This is not a claim that every use of rhetoric, framing, conceptual innovation, ambiguity, or a fallacious argument is intentionally deceptive. The classifications below concern their manipulative uses.

Sophism and sophistry

Sophism is an important established name for a large subset of what this inventory calls linguistic tricks. A sophism is an argument that appears rational or valid but owes its persuasive force to a concealed ambiguity, invalid inference, misrepresentation, irrelevant consideration, or comparable defect that obstructs truth-seeking. **Sophistry** is the practice or style of constructing and deploying such arguments.

The terms are related but not interchangeable:

- A **fallacy** is a defect in reasoning and can be committed accidentally.
- A **sophism** is an apparently plausible, argument-shaped maneuver whose defect is concealed or exploited; the term ordinarily carries a stronger implication of strategic or intellectually dishonest use.
- **Sophistry** is the systematic practice of producing, combining, or habitually relying on sophisms.
- A **linguistic trick** is broader. It also includes non-argumentative operations such as omission, euphemistic inversion, defamatory labeling, dog-whistle messaging, information flooding, and source manipulation.
- **Instrumental untruthfulness** is broader still: it is the governing orientation that subordinates truth-supporting conditions to operative effect and can employ sophistry alongside many other mechanisms.

The conceptual nesting is therefore:

```
instrumental untruthfulness
├── direct and informational deception
├── semantic and rhetorical manipulation
├── sophistry
│   └── sophisms
├── dialogue manipulation
└── propaganda and systemic deployment
```

Sophisms should consequently not be added below as one more mechanism beside equivocation, presupposition smuggling, straw men, burden reversal, or motte-and-bailey shifts. They are a **cross-cutting, argument-shaped class** instantiated by many of those mechanisms. A mechanism becomes sophistical when it is incorporated into an apparently reasoned case whose concealed defect supplies its persuasive advantage.

2. Integrity dimensions

The inventory normalizes the mechanisms against nine dimensions developed during the private source-review process.

Code	Integrity dimension	Governing question
TI	Truth integrity	Are asserted propositions presented in accordance with the speaker's evidence and beliefs?
II	Information integrity	Is relevant information included rather than selectively withheld or flooded out?
RI	Relevance integrity	Does the response address the actual issue and evidence?
CI	Clarity integrity	Is the communication sufficiently clear to permit scrutiny?
SI	Sincerity integrity	Does public speech truthfully express what the speaker thinks?
MI	Meaning integrity	Are words used in shared, stable, and inspectable senses?
DI	Discussion integrity	Are the standpoint, burdens, reasons, and closure rules handled fairly?
LI	Dialogue integrity	Is the overt kind of conversation also the operative kind of conversation?
XI	Context/source integrity	Are origin, context, identity, and evidential status represented honestly?

These dimensions are diagnostic, not mutually exclusive boxes. One mechanism commonly violates several at once.

3. Inventory

A. Assertion and information selection

LT-001 — Direct falsification

- **Aliases:** lie by commission; false assertion.
- **Operation:** Assert as true a proposition the speaker believes to be false or inadequately supported.
- **Integrity:** TI, SI.
- **Status:** Established core category.
- **Project provenance:** Source details withheld from this publication.

LT-002 — Omission and selective concealment

- **Aliases:** lie by omission; suppression; selective disclosure.
- **Operation:** Present a technically compatible fragment while withholding information needed to form the materially correct picture.
- **Integrity:** II, TI, SI.
- **Status:** Established core category.
- **Project provenance:** Source details withheld from this publication.

LT-003 — Paltering and false implicature

- **Aliases:** misleading truth; deceptive implicature.
- **Operation:** Use literally true statements to induce a conclusion the speaker regards as false, retaining the escape that the false conclusion was never explicitly stated.
- **Integrity:** TI, II, SI.
- **Diagnostic:** Ask what a reasonable listener was meant to infer, not only what the sentence literally entailed.
- **Project provenance:** Source details withheld from this publication.

LT-004 — Bullshit and evidential indifference

- **Aliases:** assertion without truth orientation; argumentative bullshit.
- **Operation:** Speak for impression, status, mobilization, or persuasion without treating the truth or falsity of the content as a governing constraint.
- **Integrity:** TI, SI.
- **Status:** Established category; distinct from a lie narrowly defined because knowledge of the truth need not guide the speaker.
- **Project provenance:** Source details withheld from this publication.

LT-005 — Trade-off suppression

- **Aliases:** one-sided effect selection; effect/side-effect asymmetry.
- **Operation:** Describe only the desired effect or only the unwanted side effect of a measure, thereby concealing that action and inaction both involve benefits, costs, risks, and alternatives.
- **Integrity:** II, RI.
- **Status:** Project-developed term; the exact formulation was not located in the reviewed source material during this pass.
- **Diagnostic:** Require the same ledger—benefits, harms, uncertainty, alternatives, and opportunity costs—for favored and disfavored measures.

LT-006 — Information flooding

- **Aliases:** firehose of falsehood; attention saturation; epistemic overload.
- **Operation:** Produce claims at a volume and speed that exceeds the audience's capacity to test them, allowing important disagreements to drown in low-cost messages.
- **Integrity:** II, RI, TI.
- **Status:** Established propaganda family; also a bridge from individual speech acts to systemic lying.
- **Project provenance:** Source details withheld from this publication.

B. Meaning, implication, and framing

LT-007 — Equivocation and private-definition escape

- **Aliases:** semantic ambiguity; mental reservation; strategic polysemy.
- **Operation:** Exploit a word's different senses—or silently use a specialist/private sense—so the audience receives one meaning while the speaker later retreats to another.
- **Integrity:** MI, CI, SI.
- **Project provenance:** Source details withheld from this publication.

LT-008 — Persuasive redefinition

- **Aliases:** persuasive definition; semantic extension or contraction; illegitimate extension of vocabulary; definitional drift.
- **Operation:** Preserve a word's favorable or condemnatory emotional force while changing the cases to which it applies. The inherited evaluation is transferred without having to justify it anew.
- **Integrity:** MI, DI.
- **Examples of form:** "True freedom is obedience"; expanding a grave term so that minor or disputed cases inherit its moral force.
- **Project provenance:** Source details withheld from this publication.

LT-009 — Doublespeak and euphemistic inversion

- **Aliases:** Newspeak; semantic cosmetics; inverted meaning; bureaucratic euphemism.
- **Operation:** Rename an act so that its description obscures agency, cost, coercion, or moral character—or makes an adverse reality sound benign.
- **Integrity:** MI, CI, SI.
- **Project provenance:** Source details withheld from this publication.

LT-010 — Presupposition smuggling

- **Aliases:** presupposition manipulation; loaded question; assumption smuggling.
- **Operation:** Encode a disputed proposition as already given rather than assert it openly, so accepting the grammatical frame silently concedes the point.
- **Integrity:** TI, MI, DI.
- **Diagnostic:** Extract every proposition that must already be true for the question or sentence to work.
- **Project provenance:** Source details withheld from this publication.

LT-011 — Selective framing

- **Aliases:** frame control; aspect selection; interpretive steering.
- **Operation:** Select and emphasize aspects of reality so as to privilege a problem definition, causal account, moral evaluation, or remedy while rendering competing descriptions less visible.
- **Integrity:** II, RI; sometimes MI.
- **Boundary:** Framing is unavoidable; the trick lies in concealing consequential selections, excluding rival frames, or presenting a contestable frame as reality itself.
- **Project provenance:** Source details withheld from this publication.

LT-012 — Outcome relabeling

- **Aliases:** terminus relabeling; "true X" maneuver; procedural-value substitution.
- **Operation:** Stretch a procedural or contestable value into an absolute, declare existing practices counterfeit, then reserve the value's name for the speaker's preferred outcome—for example, defining democracy as the policy that "the people truly want."
- **Integrity:** MI, DI, LI.
- **Project provenance:** Source details withheld from this publication.

LT-013 — Benevolent-language camouflage

- **Aliases:** care-speak; safety camouflage; coercion-as-care; convenience rhetoric.
- **Operation:** Describe expanding control, penalties, dependence, or loss of exit in the language of care, concern, safety, support, and convenience, thereby borrowing benevolent intent as a shield against structural examination.
- **Integrity:** MI, II, LI.
- **Boundary:** Benevolent language is not evidence of concealed coercion. The diagnostic is whether contestability, reversibility, and exit disappear behind it.
- **Project provenance:** Source details withheld from this publication.

LT-014 — Dog-whistle double address

- **Aliases:** coded appeal; dual-audience messaging.
- **Operation:** Use an expression with an innocuous public reading and a second, group-coded reading, enabling mobilization of insiders alongside deniability to outsiders.
- **Integrity:** MI, SI.
- **Project provenance:** Source details withheld from this publication.

LT-015 — Diffamatory fighting term

- **Original term:** *diffamierender Kampfbegriff*.
- **Operation:** Attach a negatively charged label to a person, group, or idea so moral rejection occurs before factual examination; justification is replaced by moral marking.
- **Integrity:** RI, MI, DI.
- **Status:** User-selected compound term.
- **Project provenance:** Source details withheld from this publication.

LT-016 — Symbol displacement

- **Original term:** *Symbolverschiebung*.
- **Operation:** Turn a neutral or minor object into the emotionally charged proxy for a diffuse conflict; shared rejection of the proxy synchronizes a group and substitutes symbolic hostility for examination of the underlying issue.
- **Integrity:** RI, II; sometimes MI.
- **Boundary:** This can emerge collectively without a designing speaker; it is therefore also a culture mechanism, not only a deliberate trick.
- **Project provenance:** Source details withheld from this publication.

C. Diversion and corruption of discussion

LT-017 — Quibbling and irrelevant precision

- **Aliases:** hairsplitting; trivial objection; pedantic derailment.
- **Operation:** Focus scrutiny on a minor ambiguity, exception, or wording defect that does not materially affect the disputed claim, creating the appearance of refutation while avoiding its substance.
- **Integrity:** RI, DI.
- **Project provenance:** Source details withheld from this publication.

LT-018 — Redirection

- **Aliases:** red herring; whataboutism; topic diversion; evasion.
- **Operation:** Replace the proposition under examination with another subject, comparison, accusation, or question that is easier or more advantageous to discuss.
- **Integrity:** RI, DI.
- **Diagnostic:** Restate the original proposition and ask whether the response changes its evidential status.
- **Project provenance:** Source details withheld from this publication.

LT-019 — Psychologizing Bulverism

- **Original term:** *psychologisierender Bulverismus*.
- **Operation:** Evade examination of a thesis by presupposing it false and explaining instead which motive, pathology, identity, or defect allegedly caused the speaker to believe it.
- **Integrity:** RI, DI, TI.
- **Related but distinct:** ad hominem, genetic fallacy, motive fallacy, presupposition smuggling.
- **Project provenance:** Source details withheld from this publication.

LT-020 — Standpoint substitution

- **Aliases:** straw man; misrepresentation; attributed-position drift.
- **Operation:** Replace an opponent's actual position with a weaker, more extreme, or more morally objectionable one and refute the substitute.
- **Integrity:** DI, TI, RI.
- **Project provenance:** Source details withheld from this publication.

LT-021 — Caricature-demonic phantom-enemy distortion

- **Original term:** *karikaturdämonisches Phantomfeind-Zerrbild als Hassfigur*.
- **Operation:** Construct a grossly exaggerated, morally demonized opponent from selected and invented attributes, then make this phantom a collective hate object. It is a socially elaborated straw man whose function includes affective mobilization and group identity.
- **Integrity:** TI, II, RI, DI.
- **Status:** User-developed compound term.
- **Project provenance:** Source details withheld from this publication.

LT-022 — Burden reversal and immunization

- **Aliases:** burden shifting; unfalsifiable retreat; proof-demand asymmetry.
- **Operation:** Demand that critics disprove an unsupported claim, or continually alter what would count as counterevidence, insulating the favored position from the obligations imposed on alternatives.
- **Integrity:** DI, TI.
- **Project provenance:** Source details withheld from this publication.

LT-023 — Closure sabotage

- **Aliases:** moving the goalposts; false declaration of victory; refusal to concede.
- **Operation:** Change success criteria after evidence arrives, refuse the consequences of a defeated claim, or declare resolution without answering the decisive objection.
- **Integrity:** DI, SI.
- **Project provenance:** Source details withheld from this publication.

LT-024 — Covert dialogue-type switch

- **Original umbrella:** *Dialogintegritätsverletzung*.
- **Operation:** Ostensibly participate in inquiry or critical discussion while covertly operating by the rules of another dialogue—personal quarrel, negotiation, propaganda, interrogation, or audience performance.
- **Integrity:** LI, DI, SI.
- **Example:** A request to examine evidence becomes an occasion to diagnose the questioner or signal loyalty to spectators.
- **Project provenance:** Source details withheld from this publication.

LT-025 — Reversive blockade

- **Original term:** *Reversive Blockade*.
- **Operation:** Assert an extreme opposite of the truth so emphatically that an audience disposed toward moderation searches for a midpoint and lands at a conclusion still displaced from reality in the manipulator's preferred direction.
- **Integrity:** TI, DI, MI.

- **Status:** Project-developed term; the exact phrase was not located in the reviewed source material during this pass.
- **Related mechanisms:** anchoring, false balance, midpoint fallacy, strategic polarization.

LT-026 — Person/group substitution by neologism

- **Prompting example:** *Zufallsmehrheiten*.
- **Operation:** Introduce a novel label that redirects attention from the substantive issue to the character or composition of persons and groups, allowing the original subject to remain unexamined.
- **Integrity:** RI, MI.
- **Status:** Provisional project reconstruction; the exact term was not located in the reviewed source material during this pass. More source context is needed before treating it as a settled independent type.

D. Moral attribution and enemy construction

Working heuristic — The iron law of ideological projection The **iron law of ideological projection** is the working heuristic that the less a closed ideological formation can acknowledge and correct its own discrediting motives, practices, and intentions, the more strongly it tends to attribute them to its opponents.

This is a proposed culture-mechanical principle, not an established scientific law. It generalizes the source-attested partisan expression “The Iron Law of Woke Projection” into a structurally neutral term. “Iron law” denotes a recurrent tendency, not an exceptionless rule.

It must not be converted into the claim that every accusation is a confession. That would itself become a sophism: the origin of an accusation would replace examination of its evidence. Every accusation must still be evaluated on its own evidence.

The heuristic contains several increasingly specific phenomena:

- **Psychological projection:** attributing one’s characteristics, affects, impulses, or responsibilities to another; it can be unconscious and nonstrategic.
- **Negative total projection:** transferring a generalized inventory of disowned badness to the enemy.
- **Accusation in a Mirror:** attributing one’s particular act or intention to the prospective victim.
- **Moral inversion:** more broadly reversing aggressor/defender, responsible party/victim, or good/evil roles.
- **DARVO:** the reactive sequence of denial, attack, and victim–offender reversal.
- **Project provenance:** Source details withheld from this publication.

LT-027 — Accusation in a Mirror

- **Aliases:** AiM; mirror politics; mirror accusation; *Spiegelbeschuldigung*.
- **Functional description:** preventive blame reversal; *präventive Schuldumkehr*.
- **Operation:** Attribute one’s own intended or ongoing aggression to the opponent so that one’s aggression can be interpreted in advance as defensive necessity.
- **Integrity:** TI, II, RI.
- **Functions:** Preemptive attribution, moral disinhibition, information fog, reaction delay, pretext formation, and plausible deniability.
- **Specialized neighboring term:** *Human-rights inversion* is used for related inversions in international human-rights discourse.
- **Distinction:** AiM is narrower than psychological projection and moral inversion. It specifically mirrors the actor’s own conduct or intention and is commonly pre-emptive.
- **Project provenance:** Source details withheld from this publication.

LT-028 — Positive moral appropriation

- **Aliases:** moral transfer; co-option; glittering generality; strategic mimicry.
- **Operation:** Appropriate the respected symbols, achievements, virtues, or vocabulary of another tradition or group without accepting the practices that earned their positive standing.
- **Integrity:** XI, MI, SI.
- **Project provenance:** Source details withheld from this publication.

LT-029 — Strategic moral reattribution

- **Original term:** *moralische Attributionsverschiebung*.
- **Operation:** Transfer one's own negative characteristics to the opponent while transferring the opponent's or a respected third party's positive characteristics to oneself. The combined operation performs a rhetorical "moral balance-sheet cleanup."
- **Negative subtype: Negative total projection** (*negative Totalprojektion*) attributes a broad inventory of the actor's or in-group's disowned vices to the enemy. Unlike strict AiM, it need not mirror one particular act or intention.
- **Positive subtype:** Positive moral appropriation transfers another party's virtues, achievements, symbols, or benevolent intentions to the in-group.
- **Integrity:** TI, XI, SI.
- **Status:** Synthetic family joining LT-027 and LT-028.
- **Project provenance:** Source details withheld from this publication.

LT-030 — Comparison destruction and moral leveling

- **Original term:** *moralische Nivellierung*.
- **Aliases:** false equivalence; universalized cynicism; epistemic fog.
- **Operation:** When favorable comparison is no longer credible, make distinctions between better and worse appear unknowable or irrelevant: "everyone lies," "all sides are equally corrupt."
- **Integrity:** TI, II, RI.
- **Effect:** Moral fatigue suppresses discriminating judgment without rehabilitating the discredited actor on the facts.
- **Project provenance:** Source details withheld from this publication.

LT-031 — Protection blackmail

- **Original term:** *Schutz-Erpressung*.
- **Operation:** Admit or normalize one's own harms while claiming that only submission to the harmful actor prevents an even worse enemy: "we may be harsh, but we are all that protects you."
- **Integrity:** II, RI, SI.
- **Project provenance:** Source details withheld from this publication.

LT-032 — Reality-free escalation of invective

- **Original coined label:** *political Tourette syndrome*.
- **Operation:** Emit a continuous stream of increasingly grave accusations and taboo-laden insults with little evidential constraint, gaining affective force from the extremity of the vocabulary itself.
- **Integrity:** TI, RI, MI.
- **Naming caution:** The original label is metaphorical, not clinical, and risks stigmatizing a neurological condition. The descriptive heading above is preferred for the inventory.
- **Project provenance:** Source details withheld from this publication.

LT-033 — Script-forming threat preactivation

- **Original term:** *skriptbildende Voraktivierung*.
- **Operation:** Repeatedly narrate the opponent as an imminent aggressor so a later ambiguous event is automatically recognized through the prepared script: their act is attack; ours is defense.
- **Integrity:** TI, II, RI.
- **Status:** Primarily a downstream cognitive and social effect of repeated AiM, but retained because it explains why the linguistic operation matters over time.
- **Project provenance:** Source details withheld from this publication.

LT-038 — DARVO

- **Expansion:** Deny, Attack, and Reverse Victim and Offender.
- **German description:** denial, counterattack, and *Täter-Opfer-Umkehr*.
- **Operation:** When confronted with alleged wrongdoing, deny the conduct, attack the accuser or their credibility, and recast the accused party as the real victim and the confronting party as the offender.

- **Integrity:** TI, RI, DI, LI.
- **Distinction from AiM:** AiM is commonly pre-emptive and prepares aggression as defense. DARVO is commonly reactive and protects an actor from accountability after confrontation.
- **Relation to moral inversion:** The final DARVO stage is a form of moral inversion or *Täter-Opfer-Umkehr*, but DARVO names the complete three-stage sequence.
- **Status:** Established term.
- **Project provenance:** Source details withheld from this publication.

LT-039 — Moralized character accusation

- **Source term:** Michael Andrick's account of *Moralisierung* in *Im Moralgefängnis: Spaltung verstehen und überwinden*.
- **Operation:** Move the focus from the disputed issue to the other person's character and the dialogue mode from inquiry to accusation. Reinterpret a statement, omission, association, missing conformity signal, imposed marker, or attributed target label as a revealing disclosure of character, then use that accusation to attack the person's standing or eligibility to participate.
- **Integrity:** RI, DI, LI.
- **Status:** Borrowed from Andrick and operationalized for this inventory; the culture-mechanical field extension is project-developed.
- **Related but distinct:** psychologizing Bulverism, redirection, covert dialogue-type switch, defamatory moral marking, and legitimate evidence-based judgment of conduct.
- **Systemic extension:** The complete signal-character accusation-exclusion-enforcement mechanism and Andrick's category of discursive violence are developed in *Culture Mechanics*; they are not reduced here to a linguistic trick.

LT-040 — Cue-function substitution (*Wie-Was manipulation*)

- **Source term:** Dushan Wegner's *Wie-Was-Manipulation* in *Relevante Strukturen* (2019).
- **Aliases:** recognition-cue substitution; cue-function mismatch; moral camouflage.
- **Operation:** Supply the learned perceptible cues by which an audience recognizes a valued category while the underlying operation, structure, or consequences that make the category applicable are absent, materially weaker, or opposed. The *Wie* is the recognition route; the *Was* is what the category is meant to identify.
- **Integrity:** MI, II, RI; sometimes SI.
- **Examples of the general form:** visible moral vocabulary without the corresponding conduct; credentials or institutional form without the claimed function; symbolic compliance that substitutes for the result the symbol is supposed to indicate; camouflage or decoys that elicit a learned recognition response.
- **Diagnostic:** Specify the claimed category and its constitutive function, list the cues that activated recognition, inspect actual operation and consequences, and observe what happens when cue and function are compared openly.
- **Boundary:** Every practical category relies on fallible cues and proxies. Cue-function mismatch can arise through error, changed conditions, Goodhart-like drift, or an obsolete classification rule. Manipulation is a stronger inference requiring evidence such as strategic production of the cue, recurrent asymmetry, concealment of function, or resistance to consequence-based correction.
- **Status:** Wegner's distinction is retained in his language and operationalized here as a cross-domain diagnostic. It overlaps benevolent-language camouflage, ideological symbols, paramorality, and qualified-concept inversion without being reducible to any one of them.

E. Agenda, representation, and policy coupling

LT-034 — Pretext trap of the harmful fix

- **Original term:** *Vorwandfalle der Schadlösung*.
- **Operation:** Use a real problem as the pretext for a preselected measure presented as its solution even though the measure foreseeably preserves or worsens that problem.
- **Component operations:** Problem surfing, a causal story serving as a pretextual bridge, argumentative coupling, and concealment of the harmful or placebo character of the remedy.
- **Integrity:** II, RI, TI, LI.
- **Status:** User-selected term.
- **Project provenance:** Source details withheld from this publication.

LT-035 — Ventriloquism of constituencies

- **Aliases:** self-appointed representation; constructed-interest speech; speaking for “the people.”
- **Operation:** Construct a group’s interests and speak authoritatively in its name without authorization, internal plurality, or a route by which members can contradict the attributed voice.
- **Integrity:** XI, SI, DI.
- **Project provenance:** Source details withheld from this publication.

LT-036 — Motte-and-bailey amplitude shift

- **Aliases:** mobilizing maximalism / scrutinized minimalism.
- **Operation:** Use a sweeping structural claim when mobilizing support, then retreat under criticism to a narrow technical claim; after scrutiny passes, return to the expansive implication.
- **Integrity:** TI, MI, DI.
- **Diagnostic:** Require one stable statement of the claim, its scope, and its proposed consequences across audiences.
- **Project provenance:** Source details withheld from this publication.

LT-037 — Context and source manipulation

- **Aliases:** false context; imposter content; manipulated content; information laundering.
- **Operation:** Preserve or fabricate content while falsifying who produced it, where it appeared, when it applied, or what evidential standing it has. Apparent provenance substitutes for argument.
- **Integrity:** XI, TI.
- **Project provenance:** Source details withheld from this publication.

4. Important boundaries

Honest error is not insincerity

A person can sincerely state a false belief, and can insincerely repeat a proposition that happens to be true. Sincerity and reality-tracking are distinct dimensions. The first constitutional step is to make it safe and normal for people to say what they actually think; only then can open disagreement test how well those beliefs track reality.

Semantic disagreement is not necessarily manipulation

Some disputes are genuinely verbal: participants attach different meanings to the same word. Clarifying definitions can dissolve confusion without establishing deceit. A reviewed private source supplies the relevant boundary case: shared definition repair is the remedy, whereas covertly changing a definition while retaining its emotional force is LT-008.

At society scale, persistent divergence can contribute to **intergroup semantic decoupling** and eventually **cultural interoperability breakdown (Babelization)** even when no speaker is manipulating anyone. That is a systemic condition, not a linguistic trick. Shared definition repair, trusted translation, and legitimate common procedures can increase the effective thickness or span of lifted solidarity without requiring identical first-order meanings. [Mythology Construction, “Cultural interoperability and its breakdown \(Babelization\)”](#) defines that larger condition and its anti-Babel floor.

Framing and conceptual engineering are not inherently dishonest

All finite descriptions select aspects of reality, and communities sometimes need better concepts. Manipulation begins when consequential selection or revision is hidden, rival descriptions are excluded from consideration, or the revised concept is represented as the word’s uncontested natural meaning.

A recognition cue is not automatically a counterfeit

Language, credentials, symbols, institutional forms, and behavioural markers are often indispensable evidence of an otherwise difficult-to-observe function. LT-040 does not license the inference that every proxy is fraudulent. Its target is the inspectable mismatch between cue and function and, when manipulation is alleged, the further evidence that the mismatch was strategically produced, concealed, or immunized against correction.

A fallacy is not automatically a lie

Bad reasoning can arise from haste, ignorance, motivated cognition, or honest confusion. A fallacy therefore becomes a sophism only when its plausibility is used to conceal or exploit the defect in the argument. This inventory classifies communicative operations, not the speaker's inaccessible inner intent. Evidence of a pattern, asymmetrical application, strategic retreat, resistance to correction, or concealed dialogue purpose strengthens an inference of sophisticated or otherwise instrumental use.

Effects are not always tricks

Symbol displacement, pluralistic ignorance, moral fatigue, and script preactivation can emerge through distributed repetition without a central designer. They belong here where they explain how repeated speech acts become a culture mechanism, but they should not be mistaken for proof of an individual plot.

5. Relation to the epistemic constitution

This inventory is not primarily a blacklist of forbidden expressions. In a reality-anchored, truth-seeking epistemic constitution it supplies a common vocabulary—a yardstick installed in the social *big Other*—for noticing when communication departs from truth-seeking.

The entries identify local operations; *Epistemic Agency under Mechanical Solidarity*, “Audience-modelled reconstruction and decompression” supplies a cross-cutting model of how several such operations can be combined against an anticipated recipient so that the recipient reconstructs a targeted factual, causal, moral, or authorization model.

The corresponding positive virtues are:

1. State what one actually believes and distinguish belief from knowledge.
2. Check simple factual claims before amplifying them.
3. Present material counterevidence, trade-offs, and uncertainty.
4. Keep meanings explicit, shared, and corrigible.
5. Represent an opponent's actual strongest position.
6. Answer the proposition before discussing the speaker.
7. Apply comparable evidential burdens to allies and opponents.
8. Keep the kind and rules of the dialogue visible.
9. Preserve provenance and context.
10. Permit correction without making honest concession socially ruinous.
11. Test identity-bearing and moral recognition cues against actual function and consequences.

The inventory's function is thus constitutional and formative: it helps individuals recognize and resist small acts of public untruthfulness, while their repeated resistance changes the public norm that subsequently forms other individuals.

6. Provenance and limitations

This version was produced through structured review of private project source material, vocabulary expansion, contextual reading, synonym normalization, and boundary auditing. Source filenames, links, conversation identifiers, and internal prompt logs are intentionally withheld from this publication.

LT-039 and LT-040 are explicit exceptions to that private discovery route. LT-039 was added from Michael Andrick's book material and linked directly to the underlying publication. LT-040 was added from Dushan Wegner's *Relevante Strukturen* (2019, ISBN 978-3-7394-0563-6), whose *Wie–Was* distinction is retained while the operational test and boundary are project-developed.

This is a high-recall working inventory, not a claim of semantic exhaustiveness. The reviewed source collection is large, the same mechanism may have been discussed without any of the recovered names, and several private sources contain long embedded source texts. Future revisions should add newly found mechanisms only after checking whether they are genuinely distinct operations or aliases, combinations, effects, and institutional deployments of types already recorded here.

The labels *Reversive Blockade* and *Zufallsmehrheiten* were developed during the private source-review process but were not found verbatim in the reviewed materials during this pass. They are deliberately retained with provisional provenance rather than silently attributed to a source document.

Mythology construction

mythology construction noun phrase

Status: proposed synthetic term

Fields: cultural psychology, moral psychology, social psychology, cultural evolution, behavioural genetics, sociology of culture, sociology of morality, narrative theory, political theory, institutional design, systems leadership, social epistemology

Short explanation for busy readers

Mythology construction is the study and possible practice of the formation, adaptation, embodiment, transmission, defence, and revision of culturally transmissible systems of meaning that organize how a population perceives events, explains causes, assigns moral roles, experiences belonging, and coordinates action.

The constructive element is load-bearing, but it does not imply that every mythology has a deliberate designer. This document studies both **endogenous mythology formation**—the distributed, plant-like growth of mythology from social conditions, practices, institutions, receiver dispositions, and cultural selection—and the open research possibility of **purposive mythology construction**, in which actors try to redirect that ecology toward a proposed destination. Neither path is merely auxiliary to the other. The future operational programme must determine what on-purpose design and release can actually achieve without presuming sovereign control.

Here **mythology** does not mean merely an ancient sacred tale or a false story. It means a connected system of stories, causal explanations, topoi, values, heroes and antagonists, sacred objects, identities, roles, and expectations. Individual narratives are components of a mythology. Repeated mythologies train the **mythological lens** through which the culturally formed person rapidly experiences observations and possibilities as admirable or shameful, legitimate or illegitimate, loyal or treacherous, sacred or profane, promising or threatening. Symbols, rituals, practices, institutions, systems, and habits can embody, reinforce, contradict, or defeat those lessons, but they are not thereby reduced to mythology or exhaustively treated by this definition.

The expressions **mythology** and **mythological lens** are borrowed most directly from [Ian Macdonald, Catherine Burke, and Karl Stewart's *Systems Leadership: Creating Positive Organisations*](#). Their use here is related but not identical: Systems Leadership applies them principally to the value-laden interpretation of behaviour in organizations, whereas this definition extends them to population psychology, narrative repertoires, institutions, gene-culture hypotheses, collective agency, and adversarial cultural conflict.

Within Culture Mechanics, *Systems Leadership* is the **definitive practical source for how to implement a culture**—or, in the present theory's vocabulary, how to form and stabilize the programming of local bigOthers and the culture they reproduce. A reader who wants to know exactly how to do that should read the book rather than treating the workflow below as a complete guide. *Systems Leadership* is not about mythologies alone: leadership behaviour, systems and policies, symbols, mythologies, habits, organizational arrangements, rewards and sanctions, and repeated experience work together. Any of these other channels may be as important as mythology, or more decisive, in a particular implementation.

The originating framework's verdict is that the book's practical account is **approximately 99% correct**, meaning that it requires almost no adaptation. This is a strong qualitative judgment, not a measured validation statistic or a claim of disciplinary consensus. Its limitation for Culture Mechanics is primarily one of embedding and range: it concentrates on work, work ethics, organizational design, and company or workplace culture without placing its method in the wider account of homo duplex, bigOther processing, emergent collective fields, epistemic constitution, or population-scale cultural conflict. **bigOther** is the present framework's translation, not the Systems Leadership authors' term.

This document deliberately isolates the **mythology layer** of that larger implementation problem. It develops mythology-specific extensions and refinements; it does not provide a parallel method for designing systems, selecting symbols, forming habits, or conducting leadership in general. Mythology nevertheless has an elevated place in the theory because:

Mythologies are the assembly language of the bigOther.

This originating analogy means that evaluated stories encode persons, roles, causes, permissions, prohibitions, values, and consequences in a form close to the bigOther's learned classification operations. A repertoire of such stories can train general mappings that the bigOther applies to situations it has never encountered in narrative form. The analogy identifies a privileged cultural interface, not a claim that stories are causally sufficient or that

the processor is literally digital. Assembly language still requires a working machine and execution environment. Likewise, mythology requires congruent systems, symbols, habits, conduct, sanctions, and repeated experience if its classifications are to be installed and sustained. A formally elegant mythology can fail when those other channels teach the opposite lesson.

Mythology construction is therefore more than persuasive messaging. A message asks for attention or assent. A mythology makes a world socially intelligible and gives people places within it. Its durable form is not only what a population says, but what its members notice, feel, enact, reward, punish, teach, build, maintain, and transmit.

It also faces a **one-slot constraint**. One local bigOther executes one operative mythological weave, although that weave may combine several compatible cultural packages. An incompatible governing mythology cannot be added as a parallel evaluator or ranked at runtime; replacement requires sufficient unbraiding of the incumbent and rebraiding of one successor.

A mythology cannot be judged successful merely because it spreads. Its success has several distinguishable dimensions:

1. **Entry:** Does it resonate with the recipient population?
2. **Momentum:** What interpretations and actions does it make psychologically downhill or uphill?
3. **Destination:** Does repeated participation move toward life, capability, relationship, creation, and posterity, or toward sterile repetition, dependency, and destruction?
4. **Embodiment:** Does it become practice, character, ritual, and institution?
5. **Scale:** Can it support society-wide collective agency while preserving useful differentiation?
6. **Reality coupling:** Can evidence and consequences correct it?
7. **Replacement:** Can it defend its own braid and unbraid a failing rival without leaving a nihilistic vacuum?
8. **Agency allocation:** Who is authorized by the solidarity order to perform apologetics and polemics?
9. **Adversarial viability:** Can it resist destructive competitors without reproducing their dark arts?

The recipient-fit component is called **resonant mythology construction**. Its central hypothesis is that adoption depends partly on a fit among three components:

species-typical human machinery
x
heritable dispositional configuration
x
mythological and memetic form
↓
probability of adoption, retention, enactment, and transmission

One important, non-exclusive pathway through that interaction is **relevant-structure resonance**: a mythology may gain an adoption and mobilization advantage when recipients believe that it recognizes, protects, repairs, strengthens, or gives them an honourable role in structures they already experience as morally important.

The applied workflow derived from the broader theory is called the **Mythology Construction Toolkit**.

In one sentence:

Mythology construction studies how culturally viable systems of meaning grow, are assembled, become embodied, and reproduce, while keeping open the question of how far they can also be purposefully designed and released to enable—or disable—reality-oriented collective agency.

Long semantic definition

1. General meaning

Mythology construction is the constructive companion to descriptive **culture mechanics**. **Culture mechanics** is a framework-specific term proposed in the present synthesis rather than a term attributed to an external author. It asks how mythologies train a mythological lens, how that lens supplies rapid social and moral feeling, and how people reproduce cultural order through reciprocal signalling and institutions. Mythology construction asks two linked questions:

How do mythologies grow, become assembled, selected, embodied, defended, revised, and transmitted through a living cultural ecology?

Under what conditions, and within what limits, could actors deliberately design and release a mythology so that a population recognizes, adopts, embodies, tests, corrects, or rejects it?

The first question is not reducible to a design problem. Mythologies are altered whenever recipients retell them, institutions translate them into procedures, opponents parody them, events contradict them, or a new generation interprets inherited symbols under different conditions. The second question remains a prospective research branch and does not imply a sovereign constructor. Construction is consequently closer to plant growth and, where purpose enters, gardening, institution-building, or protocol design than to writing an executable command for a passive machine.

The prospective purposive branch asks whether and how a mythology constructor can:

- diagnose an existing cultural ecology;
- select and combine inherited cultural materials;
- formulate causal stories and moral classifications;
- offer identities and social roles;
- connect symbols to practices and institutions;
- create rituals of activation and renewal;
- alter rewards, sanctions, and prestige;
- form, recognize, and constrain the persons, offices, and institutions authorized to defend or contest the mythology;
- test whether recipients actually understand and enact the intended operation;
- observe material and psychological consequences;
- revise, defend, or retire a failing mythology.

No attempted constructor can guarantee interpretation, adoption, or outcome. The object being shaped is a living, distributed social system whose members retain intelligence, interests, agency, memory, and the capacity for resistance.

Mythology formation and attempted construction are normatively neutral as a genus. Their mechanisms can support:

- moral formation and civilizational continuity;
- ecological coordination and commons management;
- constitutional solidarity among strangers;
- organizational culture and professional ethics;
- public-health cooperation;
- commercial identity formation;
- political mobilization and hegemony;
- cultic capture, scapegoating, systemic lying, or destructive mass action.

Its normative evaluation therefore requires separate questions about truth, flourishing, freedom, justice, reversibility, and consequences.

2. Semantic anatomy

Mythology In ordinary usage, *myth* can mean a traditional sacred narrative or a false belief. Neither meaning is sufficient here.

In contemporary political, organizational, and media language, **narrative** is often used as a fuzzy synonym for **mythology**. The present framework keeps *narrative* as the broader term for an organized account of events, actors, causes, and consequences. Such an account becomes culture-mechanically mythological when it also supplies social evaluation, roles, expected feeling, or permission. A merely chronological narrative need not be a mythology; “the narrative” can, depending on context, name one evaluated story, a mythology family, or the authorized lens through which events must be interpreted.

A **mythology** in this framework is a socially evaluated system of stories and associated cultural forms through which a population learns:

- what kind of world it inhabits;
- what events resemble one another;
- who “we” are;
- what has happened to us;
- who or what causes benefit and harm;

- which persons occupy the roles of protector, producer, victim, betrayer, oppressor, teacher, ancestor, or outsider;
- what deserves gratitude, shame, loyalty, resistance, sacrifice, or protection;
- which goals can be pursued together;
- which actions are permitted, forbidden, expected, or unthinkable;
- what future would count as fulfilment, decline, liberation, or catastrophe.

A mythology may contain empirical truth, error, symbolic condensation, normative commitment, historical memory, fiction, ritual, and institutional knowledge at the same time. Calling something a mythology does not decide whether it is true or false.

One narrative can be an episode within a mythology. Many mutually reinforcing narratives form a repertoire. Their repeated evaluative patterns train a more general **mythological lens**. That lens allows a new event to be classified without replaying every previous story.

Construction **Construction** is used here in a deliberately broad constructive sense: mythologies are formed, assembled, embodied, reproduced, and revised through human and social processes rather than simply appearing as finished givens. The unqualified term does not by itself settle how much of that process was intended. When intention matters, use the qualified terms below.

Two processes must therefore be separated:

Process	Meaning
Endogenous mythology formation	Distributed, substantially undesigned emergence and selection of cultural articulations from changing morphology, institutions, practices, events, and receiver dispositions.
Purposive mythology construction	Prospective research branch concerning target-state-guided intervention by an actor or organized agency into mythology and its supporting arrangements in an attempt to redirect the cultural trajectory.

The document treats both paths as substantive. Endogenous formation is not merely background for a constructor: its plant-like growth, selection, embodiment, and back-action are part of the research object in their own right. Purposive construction remains an explicitly open possibility rather than an accomplished precision science or the definition of the entire document.

The current version establishes semantic and theoretical groundwork for both paths. A fuller operational treatment of on-purpose design, release into a living cultural ecology—"the wild"—and post-release observation, adaptation, correction, and retirement remains a future addition. The present workflow should therefore be read as a provisional research and design scaffold, not as the completed design-and-release method.

Construction is not confined to verbal authorship. A school timetable that rewards punctuality, a court that visibly follows due process, an initiation ritual, a public memorial, a promotion rule, a marriage norm, an agricultural calendar, or an institution that honours truthful correction can construct mythology more durably than a speech.

The word also emphasizes that cultural order is made and remade. It does not imply that every feature was designed, that inherited practices lack real functions, or that an unconstrained designer can reconstruct society without loss.

Society or population The intended recipient is a **society** in a broadly Durkheimian sense: a population whose members participate in a shared moral and symbolic order, not merely a statistical collection of individuals.

The society may be:

- a family or local community;
- a profession or organization;
- a religious body;
- a political movement;
- a region, nation, or civilization;
- a transnational network;

- a temporary public assembled around an event.

The relevant boundary is functional: across which population must shared classifications travel for the desired cooperation to become possible?

Resonance **Resonance** is the experienced fit between a mythology and the recipient's existing psychological, moral, motivational, historical, and institutional configuration.

A mythology resonates when recipients experience it not as arbitrary alien material but as a compelling recognition, clarification, elevation, or completion of something already latent in their perception and dispositions. Resonance can produce attention, narrative transportation, moral emotion, identity, recall, and willingness to act.

Resonance is not agreement with every proposition. A mythology can resonate by naming an unease, honouring an unrecognized motive, explaining a recurring experience, or offering a role for which a person already feels prepared.

Resonance is also not proof. A false and destructive mythology may resonate powerfully; a true and beneficial account may initially fail because it lacks a culturally intelligible form.

Toolkit The **Mythology Construction Toolkit** is the current research and practical scaffold of diagnostic maps, canvases, provisional design procedures, experiments, institutional checks, and adversarial audits derived from the mythology-specific theory. It guides both analysis of endogenous formation and inquiry into possible purposive construction at the mythology layer. It does not claim to cover systems, symbols, habits, or the other culture-implementation channels in their own right; the definitive complete method remains *Systems Leadership*. In its present state it also does not claim to be a complete end-to-end protocol for deliberate mythology design, release into the wild, monitoring, and redesign; that operational lifecycle remains future work.

The **software-development-kit analogy** makes the relationship tangible. An SDK does not dictate one finished application; it exposes reusable operations from which many applications can be built. In the same way, causal-story canvases, resonance maps, role design, ritual design, institutional checks, and adversarial audits expose operations for working on the culturally installed classifier called the bigOther. The analogy has a limit: people are not passive processors. They interpret, refuse, modify, and sometimes reverse the intended operation. A legitimate toolkit must therefore include agency, inspectability, correction, and exit rather than treating compliance as successful execution.

3. Terminological neighbours and prior art

Mythology construction overlaps with several established fields without being identical to any one of them.

Neighbouring concept	Primary object	Relation to mythology construction
Narrative design	Narratives, public meaning, and their reception	Common practitioner-language near-synonym for mythology construction at the intervention level; supplies plot, character, transportation, and sequencing methods, but may stop before institutional embodiment.
Framing	Selection and salience in presenting an issue	Supplies interpretive emphasis; mythology construction joins many frames into a durable moral world.
Rhetoric and persuasion	Change in attention, attitude, or decision	Supplies message-level operations; mythology construction includes socialization, identity, ritual, and institutions.
Ideology	System of political or social ideas	Often names the propositional or justificatory layer; mythology includes affect, symbol, practice, and tacit role formation.

Neighbouring concept	Primary object	Relation to mythology construction
Propaganda	Organized persuasive communication, often strategic	Can be one implementation mode, especially when manipulative; mythology construction is the broader neutral genus.
Apologetics and polemics	Defence of a belief system and contestation of rival belief	Supplies the paired functions of maintaining one's own mythology and unbraiding a competitor; the present framework generalizes theological terms beyond religion.
Psychoanalysis	Interpretation of unconscious formations, symptoms, resistance, and repetition	Supplies a suggestive model of structured untying; its use as mythology-level deprogramming is an analogy, not Freud's own social theory.
Critical Theory and critique	Diagnosis of contradiction, domination, and historically contingent social order	Supplies polemical tools for making an inherited order questionable; mythology construction adds the burden of replacement and tests whether critique is reality-coupled or indiscriminately corrosive.
Discourse and hegemony	Contingent articulation of meaning, identity, and political boundaries	Supplies tools for equivalential chains, antagonism, nodal points, and contestation.
Organizational culture	Shared assumptions and learned ways of acting	Supplies concrete embedding mechanisms through leadership, selection, reward, ritual, and response to crisis.
Cultural evolution	Differential transmission and retention of cultural variants	Supplies population-level models of inheritance, selection, and gene–culture feedback.
Memetics and memetic engineering	Replicating cultural variants and the aspiration to manipulate their interacting patterns	Supplies a sharp carrier–replicator warning and a historical image of target-state cultural intervention; mythology construction does not adopt meme-first ontology or a promise of precise control.

[Robert Entman's account of framing](#) emphasizes selection and salience in defining problems, diagnosing causes, making moral judgments, and suggesting remedies. [George Lakoff's work on conceptual framing](#) emphasizes that political communication operates through structured concepts rather than isolated words. [Ernesto Laclau and Chantal Mouffe's theory of hegemony](#) treats collective identities and political unities as contingent articulations rather than ready-made essences.

The theological vocabulary is used here in a deliberately generalized sense. [John G. Stackhouse](#) distinguishes defensive apologetics, which answers challenges, from an offensive mode that provokes interest. Older theological classifications also distinguish apologetics from polemics directed against error, although the boundary varies among traditions. Mythology construction abstracts the functional contrast: **apologetics defends and repairs an installed mythology; polemics attacks and unbraid a rival mythology**. These definitions are not claimed as the uniquely correct theological meanings of the words.

These traditions help explain construction grammar, maintenance, and contestation. The present synthesis adds a three-component resonance model, psychological-gradient analysis, sublimation and moral formation, coupling range, lifted mechanical solidarity, reality coupling, and a complete braid–unbraid–rebraid model of mythological replacement.

Existing practical tools such as the [Butterfly Lab Narrative Design Toolkit](#), the [Counter-Narrative Handbook](#), and [Story-based Strategy](#) can be understood as partial software-development kits for changing contested cultural classification. They are prior art, not complete equivalents of the framework defined here.

James Gardner’s 1996 popular essay “[Memetic Engineering](#)” gives the stronger control aspiration a memorable historical form: a future science might manipulate interacting memes to produce a “precisely altered cultural phenotype.” The essay presents that possibility speculatively, not as an achieved science. Culture Mechanics retains two warnings from the proposal: cultural forms may reproduce without serving their human carriers, and reflexive actors may deliberately alter the selection environment. It does not infer that consciousness is nothing but an artifact of selfish memes, that memes are the only relevant agents, or that a constructor can specify a cultural phenotype with engineering precision.

Their vocabulary makes the terminological overlap concrete. In contemporary practice, **narrative design** and **narrative construction** name substantially the same intervention domain that this framework calls **mythology construction**: forming stories, causal interpretations, identities, roles, values, and expected responses so that a population perceives and acts differently. The term *mythology construction* is retained because it makes the culture-programming and evaluative function explicit and follows the narrative into symbols, rituals, practices, institutions, and the mythological lens. The toolkits remain partial rather than complete equivalents because none by itself supplies this framework’s whole ontology, embodiment account, epistemic safeguards, or relationship to Systems Leadership.

4. Place within the wider framework

Mythology construction joins four layers that should remain distinguishable:

CULTURE MECHANICS

How mythologies program evaluative perception and coordination

MYTHOLOGY CONSTRUCTION

How mythologies grow and how far they can be purposefully formed and embodied

EPISTEMIC AGENCY AND CONSTITUTION

Who may inspect, reject, revise, and correct the installed order

LINGUISTIC-TRICKS AUDIT

Which local operations corrupt meaning, attribution, and discussion

In this synthesis, **epistemic agency** means the person’s and group’s ability to understand, inspect, and revise socially supplied judgments. **Epistemic constitution** means the society-wide rules governing authority, avowal, evidence, disagreement, memory, and correction. **Adversarial linguistic audit** means the inspection of recurring micro-level operations through which communication can be made strategically misleading or correction-resistant. These are framework-specific operational uses, not definitions borrowed unchanged from one external author.

Mythology construction operates between them. It can create cultural forms that strengthen agency and correction, or forms that capture them.

The framework’s basic culture-mechanical sequence is:

mythologies and institutions

mythological lens

social and moral classification

attention, emotion, judgment, and action

visible conduct and reciprocal signalling

distributed cultural reinforcement or change

Mythology construction intervenes at every stage rather than merely at the first line.

Pre-articulation genesis and receiver-order mismatch Mythology is not causally prior in every case. A principle, story, or symbol can first be an imperfect **output** of changes that participants cannot yet formulate and only later become an **input** that programs new recipients. Historical analysis should therefore distinguish five phases of **endogenous mythology formation**:

1. **Genesis:** social morphology, institutions, practices, conflicts, ecology, and receiver dispositions generate diffuse needs, aversions, and aspirations.
2. **Articulation:** intellectuals, organizers, storytellers, or institutions give those pressures propositional, narrative, symbolic, and political form.
3. **Sacralization:** selected formulations acquire non-fungible moral weight, exemplary persons, rituals, and costly commitment.
4. **Institutionalization:** law, office, education, calendar, property, reward, sanction, and material systems embody the formulation.
5. **Reproduction and back-action:** the institutionalized mythology trains later receivers, selects actors, changes incentives and relationships, and can alter the social conditions from which subsequent mythology arises.

This sequence describes the cultural analogue of a plant growing from its ecology: no single actor need have selected the final form. “Natural” here means emergent from the operating causal ecology. It does not mean biologically fixed, morally good, free of power, or untouched by previous interventions.

A **receiver-order mismatch** is the proposed condition in which an inherited order no longer accommodates important dispositions, practical relations, needs, or aspirations developing among its receivers, although no coherent successor has yet been articulated. It is not necessarily genetic, progressive, legitimate, or consciously experienced. It can arise through demographic change, technology, institutional contradiction, education, commerce, migration, war, ecological pressure, developmental change, or altered population distributions.

Émile Durkheim’s “[Les principes de 1789 et la sociologie](#)” (1890; translated by Mark Traugott in [Émile Durkheim on Morality and Society](#), pp. 34–42) gives this research problem an unusually compact historical form. He links the transnational persistence of the revolutionary principles to “some general change which occurred in the structure of European societies” and later describes “new and unconscious aspirations” pressing against traditional structures. This is Durkheim’s hypothesis and situated diagnosis, not evidence for the present theory’s genetic branch, local bigOther, or exact causal sequence.

The temporal test is demanding. Did the relevant practices, grievances, dispositions, or structural changes precede the canonical formulation? After articulation and embodiment, did the formulation independently alter conduct, institutions, reproduction, or later receiver formation? If not, the proposed output-to-input transition has not been shown.

Prospective purposive construction as a trajectory-intervention hypothesis The prospective branch models a purposive-construction attempt as beginning with a proposed **destination** (D^*): a normative, institutional, behavioural, or civilizational condition that an actor wants to make more likely than it would be under the diagnosed baseline trajectory. This is a research model for intention, release, reception, and outcome, not a claim that reliable redirection has already been demonstrated. The destination is a declared design input, not a prediction of history’s natural endpoint and not evidence that the actor possesses jurisdiction to pursue it.

The hypothesis treats mythology as a principal symbolic **intervention surface** because it may change which persons, causes, values, actions, and futures feel socially real. It is not the whole implementation stack. Systems, leadership conduct, incentives, rituals, material arrangements, sanctions, and events may support, transform, or falsify the intended classification.

Where construction is attempted, the resulting successor need not be identical to the design intention:

actual successor
= intended destination × receiver fit × incumbent resistance
× institutional selection × rival intervention
× unintended consequence × reality

The multiplication sign expresses joint constraint, not a calibrated equation. Recipients retell, reinterpret, refuse, combine, and sometimes invert the offered material. Institutions select what can be enacted. Rivals counterframe it. Reality supplies consequences that may correct the programme or be suppressed by it. A research programme on purposive construction must therefore model adaptive steering under uncertainty rather than assume precise cultural manufacture.

When evaluating or eventually designing an intervention, the target-state audit should ask:

- Who chose (D^*), for whom, and by what jurisdiction?
- Which baseline trajectory and receiver–order mismatch are actually evidenced?
- Which human capabilities and protected jurisdictions should the destination preserve?
- May recipients inspect, refuse, revise, and remove the intervention and its authorized actors?
- What evidence would show diversion from the destination or harm to carriers?
- Could the mythology optimize its own transmission while defeating the stated human purpose?

Aspirational authorization and the functional remainder **Aspirational authorization** is the proposed process by which a formulation acquires social authority because receivers experience it as expressing their needs and aspirations. Durkheim writes of the principles of 1789:

“Their authority comes not from their being in accord with reality but from their conformity to national aspirations.”

This is a mechanism of authorization, not an epistemic warrant. Resonance can explain why a claim recruits, sacralizes, or coordinates without showing that the claim is factually accurate, morally legitimate, constitutionally authorized, or beneficial in consequence.

The corresponding **functional-remainder test** asks what remains after an explicit doctrine or causal explanation has been criticized:

- What need, aspiration, grievance, coordination problem, or protected good was the doctrine carrying?
- Does that remainder exist independently of the doctrine’s factual errors?
- Was the doctrine actually necessary to satisfy it, or merely one available vehicle?
- Which alternative formulation could answer the remainder with better reality coupling and fewer destructive consequences?

Evaluation must therefore keep at least four questions independent:

epistemic accuracy
× receiver need or aspiration
× integrative and motivational function
× moral and institutional consequence

A false explanation need not imply an unhealthy need. An integrative mythology need not be true or good. A legitimate aspiration does not vindicate every programme that claims to express it.

Scientific explanation, political judgment, and intervention The outputs of mythology analysis should not be collapsed:

1. **Description and source criticism:** what actors said, did, experienced, and recorded.
2. **Causal explanation:** which mechanisms and conditions best explain the observed process.
3. **Normative and constitutional judgment:** which purposes, rights, jurisdictions, and trade-offs should govern.
4. **Political or organizational intervention:** what should be attempted under uncertainty, by whom, with which authority and safeguards.

Durkheim distinguished sociology, which “studies what is and what has been,” from *l’art politique* and practical solution. His separation is useful here as an anti-conflation rule, not as a claim that empirical knowledge is irrelevant to action or that normative premises cannot be criticized. A correct causal account does not select a legitimate end, confer jurisdiction, or guarantee that an intervention will work. Conversely, an urgent political purpose does not convert resonance or moral conviction into causal evidence.

A contemporary witness can also be an operator inside the field: reporting an atmosphere, classifying factions, advocating a successor, and attempting to move the conflict in the same text. That dual role increases access and bias simultaneously. Apply the evidential protocol in [Epistemic Agency under Mechanical Solidarity, “Observability, cultural forgetting, and contemporary witnesses”](#) rather than treating proximity as either calibration or disqualification.

5. What is being constructed

A mythology is a structured configuration, not a bag of slogans. Its major design objects include:

Design object	Guiding question
World model	What kind of world do participants inhabit?
Historical memory	What happened, what was inherited, and what remains unfinished?
Desired world	What future would constitute fulfilment or flourishing?
Feared world	What decline, domination, betrayal, or dissolution must be avoided?
Topoi	Which recurring situations and recognisable commonplaces organize interpretation?
Plot or mythos	By what causal sequence did the present arise, and how can it change?
Moral grammar	Which dimensions of care, proportionality, loyalty, authority, purity, equality, property, or liberty are activated?
Relevant structures	Which relationships, role-contexts, institutions, practices, legal orders, or shared futures carry moral weight; what supports or damages them; and how are conflicts, standing, and jurisdiction resolved?
Causal stories	What or who produced the condition, with what intention and responsibility?
Characters	Who acts as protagonist, beneficiary, victim, guardian, producer, obstacle, or antagonist?
Sacred objects	What may not be traded away without moral desecration?
Master signifiers	Which compact terms organize otherwise diverse demands and identities?
Identity offer	Who can the recipient become by entering the mythology?
Role offer	What concrete contribution can that person perform?
Permission structure	What may, must, or must not be done?
Practices and rituals	How is the mythology repeatedly enacted and renewed?
Institutional embodiment	Which offices, rules, rewards, and material systems reproduce it?
Actor architecture	Which persons, offices, or institutions may authoritatively defend, interpret, attack, repair, or replace it?
Reality interface	What outcomes, observations, or failures can correct it?
Exit and repair	How can error be admitted, harm repaired, and participation ended?

These components need not all be explicit. The more important the mythology, the more likely its decisive knowledge is stored in habitual action, institutional design, calendar, etiquette, architecture, and remembered example rather

than in a single canonical text.

5.1 Mythological replacement: braiding, apologetics, and polemics Mythology construction is not only the production of new material. It also concerns the **replacement problem**: how one governing mythology loses authority and another acquires it.

The framework proposes a **one-slot hypothesis**: one local bigOther occupies the one PCI slot and executes one operative mythological lens. A person can entertain many stories, roles, schemas, identities, and alternative worldviews in memory and reflective thought. The operative lens may likewise be a complex braid assembled from several compatible programming packages or libraries. But these are not independent local bigOthers or governing programs awaiting a higher runtime rule that ranks them. Their operative meanings and relations are already produced within the one installed weave. The PCI analogy describes exclusive occupancy by one evaluator, not literal neuroanatomy, simplicity of the program, or cultural purity.

Compatibility concerns load-bearing classifications and authority relations, not mere similarity. As *Culture Mechanics*, “The single-slot principle,” illustrates, Paul’s pride in supporting himself through work shows how Christianity and a *Berufsethos* can reinforce one another inside one weave rather than compete for supremacy. Conversely, the originating framework states that Christianity and the National Socialist worldview are deeply incompatible programming systems. Nazi programming could not be installed beside an intact Christian program. Capture required the incumbent Christian braid to be loosened and unbraided sufficiently for retained and new strands to be rebraided into one Nazi-governed successor.

An installed mythology is best pictured as a braid:

A single strand is weak. Repeatedly crossing the strands makes the whole structure strong, flexible, durable, and redundant. A historical story supports a moral judgment; the judgment honours an identity; the identity performs a ritual; the ritual authorizes an institution; the institution makes the historical story visible again. No single proposition need carry the entire load. If one strand frays, neighbouring strands preserve the pattern.

The more human image is a mother braiding her daughter’s hair. Her hands repeatedly cross flexible strands that would otherwise drift apart, producing a form stronger, more orderly, and more durable than any strand alone. Mythological formation similarly turns many stories, habits, values, and expectations into a structure that can survive movement and local damage without becoming rigid.

Without such formation, culturally supplied meanings may instead resemble a box of tangled cables: fragments of injunction, desire, fear, memory, and borrowed language cross one another without traceable structure. The result can be a Gordian knot or **spaghetti code** in the co-processor—difficult to inspect, debug, or deliberately revise. Braiding is structured cultural programming: it does not eliminate complexity, but gives the strands a discoverable relation and a durable direction.

This produces two indispensable operations:

- **Mythological apologetics** defends, explains, repairs, and renews the braid. It answers objections, clarifies apparent contradictions, reconnects inherited symbols to living practices, and removes obstacles to justified confidence.
- **Mythological polemics** attacks and unbraids a rival braid. It identifies load-bearing strands, separates associations that had seemed natural, exposes false causal links or contradictory permissions, and withdraws authority from a mythology that is to be displaced.

The presence of a rival mythology does not by itself mean that active conflict has begun. The framework distinguishes:

- **mythological rivalry**: informal or decentralized competition among meaning systems;
- **mythological conflict**: active interference with a rival mythology’s transmission, authority, membership, or institutional embodiment;

- **cultural-program conflict:** competition between incompatible governing programs or operative lenses, where single-slot replacement becomes relevant.

Rivalry becomes conflict when participants begin actively interfering with the rival mythology's transmission, authority, membership, or institutional embodiment.

Recruitment, polemical unbraid, conformity testing, delegitimation, channel exclusion, institutional displacement, and censorship can perform this transition. *Culture Mechanics*, "Disagreement, mythological rivalry, and ideological-form conflict," distinguishes these operations from propositional, causal-story, and classification conflicts and names the organized recruitment-and-suppression configuration **ideological-form conflict**. Physical coercion or violence marks the narrower **fundamentalist-form conflict**. These Culture Mechanics terms translate rather than reproduce Kenneth Minogue's conflict-centered use of *ideology*.

Polemics is crucial because an incompatible successor mythology cannot simply be placed beside an incumbent that still occupies the slot. The incumbent tells recipients how to classify the newcomer and may mark it as absurd, immoral, impure, treacherous, or literally unintelligible. Construction therefore includes a controlled sequence of dissolution and reconstruction:

```
map the incumbent braid
  ↓
separate recoverable strands from false bindings
  ↓
polemically unbraid the incumbent's governing authority
  ↓
keep a bridge across the liminal interval
  ↓
braid the successor mythology into role, ritual, and institution
  ↓
maintain it through reality-coupled apologetics
```

The bridge matters. Pure unbraid can destroy confidence more quickly than a constructive replacement can grow. It may leave cynicism, anomie, or raw first-order identity to occupy the vacancy. Effective polemics therefore does not merely say that the old order is bad. It distinguishes what is false or destructive from what remains true, functional, or worthy of inheritance, and it accepts responsibility for the successor order its critique makes possible.

Replacement need not erase every incumbent strand. Words, symbols, memories, rituals, offices, practices, and self-descriptions may be preserved, but their operative meaning comes from their bindings within the successor weave. A Nazi-Christian successor is therefore one rebraided program, not a Nazi program ranked above an intact Christian program. Failed or incomplete replacement may produce contradiction, instability, or spaghetti code in one tangled lens; it does not produce several simultaneously operative bigOthers.

Revolutionary overshoot and mobilizational absoluteness The originating hypothesis is:

To hit the target, a revolutionary mythology may have to aim above it. An empirically false or normatively overextended account of the autonomous person may sometimes function as scaffolding for creating protected personal standing against an entrenched absorptive order.

This **revolutionary-overshoot hypothesis** does not say that exaggeration is always necessary, conscious, justified, or harmless. It distinguishes three mechanisms:

1. **Conscious strategic overshoot:** actors deliberately demand more than the settlement they expect to retain.
2. **Sincere revolutionary absolutization:** actors experience the counter-principle as categorical and timeless.
3. **Cultural selection among variants:** uncompromising formulations recruit, coordinate, and survive better than balanced variants without any author designing the overshoot.

Mobilizational absoluteness names the independent degree to which a programme presents its claims as categorical, eternal, exceptionless, sacred, or non-negotiable. Durkheim treats the "categorical and absolute form" of the principles as characteristic of creative eras and "new and hardy faith." That observation motivates the dimension; it does not establish that absoluteness caused revolutionary success.

Mobilizational absoluteness is not the same as field strength, first-order solidarity, lifted solidarity, full slot occupancy, comprehensive jurisdiction, closed corrigibility, or fusion. A lifted constitutional generator can be defended categorically; a first-order creed can be weakly held; a mobilizing absolute can protect individual sovereignty or absorb it.

The hypothesis predicts that stronger incumbent resistance should, other things equal, select more categorical counter-mythologies, and that some successful overshoots should later be translated into more discriminating institutions or lifted generators. It is weakened where moderate formulations displace equally entrenched orders just as reliably, where categorical variants owe their success to coercion or material advantage rather than receiver fit, or where the alleged overshoot never recedes and simply installs another closed first-order order.

For the mapped features and limits of the braid, tangled-cable, spaghetti-code, unbraiding, and rebraiding pictures, and their relationship to the framework's computing and physical models, see [Analogical Models in Culture Mechanics: A Semantic Inventory](#).

5.2 Who performs apologetics and polemics? Apologetics and polemics are not performed by an abstract mythology acting without carriers. They require an **actor**, but the actor is not always an autonomous individual and need not be the person whose mouth or pen produces the visible statement. The relevant actor is the person, office, or institution whose intervention the solidarity order recognizes as having authority to defend, interpret, attack, condemn, repair, or replace mythology.

In **first-order mechanical solidarity**, authority is commonly personalized. A priest, clan chief, elder, shaman, bard, prophet, or other singular figure may embody the group's memory and sacred distinctions. The person's lineage, initiation, charisma, age, demonstrated courage, ritual position, or inherited office makes the person a focal node of the common consciousness:

```
first-order mythology
↓
recognized sacred or political person
↓
defence of the group's braid + attack on rival braid
```

Here it may be difficult to separate person from office. An attack upon the chief or priest can be experienced as an attack upon the group, while the person's defence of the mythology carries force because the group recognizes that person as one of its authoritative embodiments.

In **lifted mechanical solidarity**, apologetic and polemical agency can migrate from a singular person to an institution. A court, church, university, academy, professional body, newspaper, parliament, party, ministry, or constitutional office can defend the meta-order, interpret its canonical terms, reject rival claims, and sanction violations. Humans still speak, write, judge, and enforce, but they do so as officeholders, organs, or representatives of an actor that persists beyond them:

```
lifted civic or professional mythology
↓
institution with office, memory, procedure, jurisdiction, and succession
↓
replaceable human representatives
↓
apologetic and polemical intervention carrying institutional authority
```

Calling the institution the **real actor** does not erase human action or attribute a supernatural mind to an organization. It identifies where durable authority, memory, procedure, resources, reputation, and continuity reside. The individual judge, editor, professor, bishop, or civil servant may leave while the institution continues to speak and act in a recognizably continuous way.

The framework further proposes that apologetic and polemical actors are partly **selected by the solidarity field**. The mythology creates recognizable positions or **systemic slots**: guardian of orthodoxy, authoritative interpreter, reconciler, prosecutor, boundary keeper, heresy hunter, reformer, or polemicist. People differ in how strongly those positions attract them and in how credible they appear once they approach them.

```
mythology and solidarity order create a systemic slot
↓
the slot offers a recognizable duty, danger, status, and permission
↓
persons differ in dispositional fit
↓
some gravitate toward training, conflict, office, or public advocacy
↓
```

group or institution recognizes, ratifies, appoints, or rejects them

actor-slot coupling

authorized apologetic or polemical agency

the actor reinforces or modifies the field that selected the actor

Relevant dispositions may include sensitivity to incoherence or boundary violation, loyalty, aggression, verbal ability, courage under conflict, desire for order, status motivation, institutional temperament, historical memory, and willingness to bear the costs of public defence. Apologetic roles may disproportionately attract people oriented toward continuity, integration, explanation, and repair. Polemical roles may disproportionately attract people oriented toward threat detection, semantic decomposition, boundary enforcement, confrontation, and attack. The same person or institution can combine both functions, but the dispositional profiles need not be identical.

This is the **natural-choice hypothesis** in a precise sense. A person can choose to study, prepare, campaign, seek office, or attempt an intervention. The person cannot by private decision alone make the intervention carry the authority of the solidarity order. Self-appointment creates a claimant; effective apologetic or polemical authority requires reciprocal coupling between person and slot:

personal choice and preparation

+

dispositional and symbolic fit

+

recognition by the relevant group or institution

=

systemically effective actor

“Natural choice” does not mean that one genetically predetermined individual is destined for the position. It means that, among available persons, the interaction of disposition, biography, competence, network position, symbolic credibility, institutional need, and collective recognition makes some candidates more likely than others to occupy the slot successfully.

The E–M-field analogy therefore applies to agency as well as resonance. The solidarity field creates gradients and positions toward which fitting actors move; the actors then strengthen, redirect, or destabilize the field. They are simultaneously products, carriers, and modifiers of the mythology.

Systemic selection is not automatically wise. A corrupt or death-driven mythology may select gifted rationalizers, persecutors, or dark artists because their dispositions fit the pathological slot it offers. A lifted institution may also become self-protective and select representatives who defend organizational survival rather than the institution’s stated purpose. Actor selection must therefore be evaluated by reality coupling and institutional consequence, not merely by the intensity of recognition.

6. The dimensions of mythological success

Mythology construction uses a multidimensional definition of success.

Entry: resonance Does the mythology activate existing human machinery and fit the population’s dispositional and cultural configuration sufficiently to gain attention, recognition, and initial adoption?

Momentum: psychological gradient Once entered, which interpretations and actions become easier to repeat? Does the mythology supply immediate relief, belonging, certainty, and catharsis, or does it make discipline, truthfulness, service, and mastery increasingly meaningful?

Destination: drive direction What does the path cumulatively produce? Does repetition increase capability, relationship, creation, maintenance, and posterity, or dependency, sterile repetition, resentment, and destruction?

Embodiment: cultural durability Does the mythology become a stable part of character, practice, ritual, selection, reward, institution, and material environment?

Scale: collective agency Does the mythology travel across the population required for cooperation? Does it build shared second-order meaning or merely intensify local subcultures?

Reality coupling: adaptive correction Can evidence, failed prediction, ecological consequence, human suffering, exit, and comparison correct the mythology? Or does every failure generate only a demand for greater commitment?

Replacement: apologetics and polemics Can the mythology explain and repair its own braid under challenge? If it must replace an incumbent order, can it identify and unbraid the incumbent's false or failing bindings while preserving recoverable knowledge, continuity, and a credible route into the successor? Does its polemic open a constructive future, or merely dissolve trust in every available order?

Agency allocation: actor-slot coupling Who occupies the apologetic and polemical slots, and why does the solidarity order recognize that person, office, or institution? Does authority depend upon personal embodiment, institutional office, or both? Can succession preserve legitimate agency without turning the role into either charismatic personal rule or self-protective institutional closure?

Adversarial viability: competition and defence Can the mythology survive parody, hostile reframing, semantic capture, demoralization, and psychologically cheaper competitors? Can it defend itself without becoming deceptive, self-sealing, or persecutory?

The dimensions can diverge. A mythology can be highly resonant, psychologically downhill, institutionally durable, society-wide, and catastrophically reality-detached. Another can be true and beneficial but culturally inert. Construction seeks a viable combination rather than maximizing a single variable.

Recipient fit: resonant mythology construction

7. The three-component resonance model

The proposed model collapses the apparent complexity of recipient fit into three interacting components.

7.1 Species-typical human machinery Human beings share broadly similar evolved capacities that make mythology possible:

- sensitivity to harm, reciprocity, loyalty, rank, purity, property, equality, and domination;
- narrative comprehension and transportation;
- imitation, prestige learning, and conformity;
- attachment, identification, and coalition formation;
- authority sensitivity and reactance;
- sacred-value formation;
- emotional contagion and synchrony;
- causal inference and agency detection;
- status seeking and reputation management;
- ritual participation and collective effervescence.

Moral Foundations Theory—developed principally by Jonathan Haidt, Craig Joseph, Jesse Graham, and collaborators—treats moral foundations as evolved psychological preparations elaborated by culture. The present framework borrows the metaphor of **moral taste buds** and the formulation, emphasized in [Haidt's *The Righteous Mind*](#), that biology supplies a first draft rather than a finished moral text. Common receptors can be differently weighted and culturally trained. The framework also extends the metaphor beyond the current list of moral foundations; the complete species-typical machinery includes narrative, motivational, social-learning, and collective-coordination capacities.

The culinary image captures both commonality and difference. People may possess broadly similar taste receptors while preferring different cuisines, intensities, and combinations because receptor sensitivity, development, and learning differ. A mythology constructor is therefore like a cook who must understand both the available receptors and the formed palate. The dish that produces the strongest first sensation is not necessarily the one that nourishes, and a familiar recipe may fail when transported unchanged into another culinary culture.

Melanie Green and Timothy Brock's work on narrative transportation helps explain how attention, emotion, and imagery can temporarily organize recipients inside a narrative world. Transportation is one mechanism of entry, not the entire resonance process.

7.2 Heritable dispositional configuration Within the shared architecture, people differ in thresholds, weightings, sensitivities, motives, temperaments, and capacities. The theory proposes that part of this variation is heritable and highly polygenic.

Candidate dispositions include:

- individualism and collectivism;
- autonomy and reactance;
- care and threat sensitivity;
- proportionality and cheating detection;
- equality and anti-dominance sensitivity;
- loyalty, authority, purity, order, and property sensitivity;
- novelty seeking and uncertainty tolerance;
- affiliation, status, power, tranquillity, honour, and curiosity;
- preference for personal versus impersonal trust;
- producer-like and guardian-like orientations.

A **polygenic score** combines the small estimated associations of many genetic variants into a probabilistic index for a trait or outcome. Robert Plomin's *Blueprint* popularizes the relevance of highly polygenic inheritance for psychological differences. A score is neither an essence nor an individual destiny. Its proposed role here is predictive: future scores may help explain why different people respond differently to the same mythological configuration.

The useful image is **gold dust rather than a single nugget**. Each measured variant contributes, at most, a minute weighted signal. Aggregating many such specks can produce a probabilistic population-level prediction, but it does not reveal a hidden "individualism gene," determine one person's response, or eliminate the importance of culture and situation.

The framework therefore includes, as real research hypotheses:

- that mythology receptivity has partly heritable components;
- that future polygenic scores may predict differential receptivity;
- that scores may add predictive information beyond demographics and self-report;
- that population histories may alter the distribution of relevant dispositions;
- that producer-like and egalitarian-guardian-like configurations may prove to be partly heritable clusters.

These hypotheses are not removed because current scores are incomplete. Their absence from present measurement defines work to be done. At the same time, current construction practice must diagnose expressed traits rather than pretend to read unmeasured genotypes.

7.3 Mythological and memetic configuration The third component is the cultural form offered to the recipient. It includes the mythology's moral weighting, causal model, identity, roles, status economy, authorities, symbols, practices, institutions, and psychological rewards.

A mythology has a meaningful chance of adoption when it:

- activates shared human capacities;
- fits the recipient's dispositional weighting;
- explains experience through a plausible causal worldview;
- offers satisfying but enactable motives and roles;
- uses trusted symbols and messengers;
- becomes compatible with the recipient's social network and institutions;
- supplies an environment in which the newly adopted identity can be reinforced.

The three components meet recursively:

COMMON HUMAN MACHINERY

provides the possible receptors and learning capacities

↓

HERITABLE DISPOSITIONAL CONFIGURATION

weights sensitivities, motives, thresholds, and niche preferences

7.4 Relevant-structure resonance across the three components Relevant-structure resonance is not a fourth component beside common human machinery, dispositional configuration, and mythological form. It is a proposed interaction pathway through them. The source formulation comes from Dushan Wegner's *Relevante Strukturen* (2019; ISBN 9783739405636), in which experienced good and evil are connected to the strengthening and weakening of relevant structures. Culture Mechanics translates the proposal into two linked but distinct hypotheses:

Relevant-structure appraisal hypothesis: people often experience an action, omission, continuation, or proposed change as good when they believe it strengthens, protects, repairs, or honourably serves a structure they experience as relevant, and as evil when they believe it weakens, corrupts, betrays, or destroys such a structure.

Relevant-structure resonance hypothesis: other conditions being equal, a mythology often gains an advantage in adoption, retention, enactment, and transmission when recipients believe that it recognizes or supports their relevant structures, and loses that advantage when it appears indifferent or hostile to them.

The second hypothesis gives a specific account of why one mythology may be followed while another, even one making superficially similar promises, is rejected. A mythology can name a threatened family, profession, community, institution, right-bearing legal relation, practice, relationship, or shared future; explain what is happening to it; assign guardian, victim, beneficiary, and antagonist roles; and offer the recipient an honourable way to protect or repair it. Competing mythologies can address the same structure while disagreeing about the causal effect, legitimate representative, proper jurisdiction, time horizon, or precedence among conflicting structures.

The account is deliberately non-exclusive. Curiosity, habit, coercion, prestige, material incentive, exhaustion, institutional dependence, social proof, or attraction to a new identity may outweigh relevant-structure fit. Mythologies can also reprogram relevance rather than merely fit what recipients already find important. A present story may activate an installed concern; repeated stories, practices, sanctions, and institutions may durably change which structures matter or how their conflicts are resolved.

Resonance establishes neither truth nor benefit. The variables must be measured and evaluated separately:

“Strengthening” cannot be reduced to one score. A mythology may improve an institution’s continuity, capacity, reach, or cohesion while damaging its truth-contact, corrigibility, legitimacy, person-preservation, or external relations. An oppressive institution can therefore strengthen itself in some dimensions by absorbing persons or transferring costs. Relevant-structure resonance may help explain why participants support it without making that support morally sufficient.

7.5 Mirrored and foregrounded relevance Two further source observations from Wegner should remain visible as hypotheses rather than disappear into the broader vocabulary of empathy, attention, or narrative transportation.

Mirrored-relevance hypothesis: narrative identification can make another person’s relationships, injuries, dependencies, responsibilities, or anticipated future temporarily function as felt-relevant structures for

the recipient.

Foregrounded-relevance hypothesis: selecting which affected structures are placed before the recipient’s mental attention can change their present salience and therefore the moral appraisal of an event or proposal.

The hypotheses are related but distinct. Mirroring proposes an identificatory route by which another’s structure becomes experientially one’s concern. Foregrounding proposes attentional selection among structures that may already carry some installed weight. Either can produce **relevance activation** without durably changing the mythological lens. Repeated narrative, practice, reward, sanction, and institutional reinforcement may later contribute to **relevance reprogramming**, but one emotionally successful story does not demonstrate that change.

These labels are Culture Mechanics operationalizations of Wegner’s discussions of *Spiegelung* and of what is placed “vorn Auge,” not terms he formally defines in this form. Availability, ordinary empathy, transportation, novelty, and emotional contagion are alternatives or neighbouring mechanisms. A useful test separates one-shot salience and identification from later change in independently measured rankings, sacrifice choices, resource allocation, and behaviour outside the original story.

7.6 Relevant-structure weaponization and Wegner’s control schema Wegner’s formulation “**Ethik ist eine Waffe**” and his **Vierschritt der Kontrolle** describe a practical use of relevant-structure appraisal:

FOR A CHANGE

present the change as strengthening a relevant structure
present opposition as accepting or causing its weakening

AGAINST A CHANGE

present resistance as preventing the structure's weakening
present the proposed change or its advocates as causing that weakening

Culture Mechanics retains this in Wegner’s language as a **relevant-structure-weaponization schema**, not as a universal law of moral argument. It identifies an upstream route by which relevance selection and a causal story can generate protector, victim, culprit, and bad-member classifications before moralized character accusation, public synchronization, sanction, or delegated power:

select a high-relevance structure
↓
represent my side as support and the rival as damage or tolerated damage
↓
compress the appraisal into a moral token
↓
public alignment, accusation, sanction, or authorization

Reasoning about actual effects on valued persons and institutions is not thereby manipulative. The adversarial diagnosis requires further evidence such as fabricated effects, omitted structures or trade-offs, selective relevance, unfounded attribution of intention, blocked decompression, or use of moral classification to pre-empt examination. Actual multidimensional effects, normative standing, and jurisdiction remain separate from the appraisal the schema succeeds in producing.

8. The observable resonance surface

The operational interface of the three-component model is multidimensional:

expressed dispositions × moral intuitions × motives × relevant structures × causal worldview × group identity × authority structure × institutions × situation

These dimensions are not nine foundations competing with genetics. They are observable forms through which common machinery, dispositional variation, and cultural programming meet.

Surface dimension	Diagnostic question
Expressed dispositions	What patterns of temperament, autonomy, trust, threat response, and cooperation are repeatedly visible?

Surface dimension	Diagnostic question
Moral intuitions	Which violations produce immediate care, anger, disgust, betrayal, cheating, oppression, or encroachment responses?
Motives	Which forms of belonging, status, order, independence, power, curiosity, honour, or tranquillity are sought?
Relevant structures	Which relational arrangements already carry moral weight, what is believed to support or damage them, and how are their conflicts ordered?
Causal worldview	Are people disposed toward constrained trade-offs, systemic redesign, providence, fate, conspiracy, personal agency, or impersonal mechanism?
Group identity	Which “we” already commands loyalty, shame, memory, and sacrifice?
Authority structure	Who may name events, certify knowledge, settle disputes, and grant legitimacy?
Institutions	Which rules, rituals, roles, and incentives already embody the culture?
Situation	Which event, threat, opportunity, humiliation, or crisis is activating the configuration now?

The same recipient may occupy different positions across domains. A person can prefer impersonal accounting in commerce, intimate need-based sharing in family life, hierarchy in a military role, and egalitarian discussion among friends. Resonance mapping must therefore be situational and role-sensitive rather than reducing a person to one ideological label.

9. Developmental amplification and active niche selection

The theory adopts **active gene–environment correlation** as a developmental mechanism. [Robert Plomin, John DeFries, and John Loehlin’s early formulation](#) distinguishes ways in which genotypes and environments can become correlated; [Sandra Scarr and Kathleen McCartney](#) subsequently developed the active form into a theory of how people increasingly select and construct their own environments. Mythology construction borrows this mechanism but extends the object of selection to mythological repertoires, identities, institutions, and culturally marked niches. This usage is compatible with, but not identical to, [John Odling-Smee, Kevin Laland, and Marcus Feldman’s evolutionary niche-construction theory](#), which concerns organisms’ modification of selective environments and ecological inheritance.

As people gain autonomy, they increasingly select, modify, and create environments that fit their dispositions:

Mythologies can become cultural niche-selection devices. They tell people where “someone like me” belongs, which occupation is honourable, which partner is admirable, which community feels safe, and which costs are meaningful. Adoption therefore changes not only belief but the environments that will shape later belief.

This produces an **age-amplification hypothesis**:

Differences in mythology receptivity may become more visible with age when people increasingly construct lives that express and reinforce their dispositions.

The hypothesis does not require every disposition to grow monotonically. Institutions, trauma, conversion, migration, education, and deliberate self-formation can redirect development. It predicts a tendency toward self-selected amplification, not an irreversible fate.

The cultural-meta-environment hypothesis Behavioural-genetic variance components and adoption studies often find that growing up in one household explains less of the variation among people than ordinary nurture theories predict. The present framework proposes that this does not exhaust systematic environmental formation.

A society-wide bigOther may shape nearly everyone while contributing little to measured differences between siblings. Individuals can also encounter that same cultural system through different peers, events, authorities, roles, and self-selected niches. A patterned population-level influence may therefore appear statistically as non-shared experience at the individual level.

The proposed **cultural-meta-environment hypothesis** is:

Some systematic non-genetic formation operates through the distributed cultural environment rather than through the shared household, while dispositional niche selection determines which parts of that environment become formative for each person.

This hypothesis does not simply rename all non-shared environmental variance “the bigOther.” It predicts identifiable pathways—media, institutions, peer networks, rituals, local authorities, historical events, and selected niches—through which society-wide mythology produces patterned but individually different exposure.

10. Gene–culture coevolution

Genes and culture form interacting inheritance systems. The quantitative research programme was pioneered by [L. Luca Cavalli-Sforza and Marcus Feldman](#) and developed in dual-inheritance theory by Robert Boyd and Peter Richerson. [Peter Richerson, Robert Boyd, and Joseph Henrich](#) review gene–culture coevolution in the genomic era; [Joseph and Natalie Henrich](#) apply the approach to human cooperation. The present framework borrows the reciprocal gene–culture mechanism but makes differential **mythology receptivity** its specific, still hypothetical, target.

The **electromagnetic-wave analogy** expresses the intended reciprocity. In an electromagnetic wave, changing electric and magnetic fields belong to one propagating process; neither is merely an inert passenger behind the other. Likewise, inherited dispositions help select mythologies, while durable mythologies construct environments that can alter later biological selection. Genes and mythologies are not literally fields, and their transmission rules and timescales remain different. The analogy serves only to resist a one-way picture in which either biology writes culture or culture writes on biologically blank recipients.

The mythology-construction model proposes the following long feedback loop:

This is the sense in which biological evolution and mythological evolution can be said to beget one another. The two systems operate at different speeds and through different transmission rules, yet each helps form the environment in which the other is selected.

The model permits a **fast-evolution hypothesis**: where cultural selection pressures remain strong and directionally stable, biologically relevant population change need not be confined to prehistory. Partner choice, fertility, migration, survival, and status can alter the distribution of dispositions across historical time. This is a proposed mechanism to test, not a warrant for inferring a genetic change whenever a culture changes quickly.

A deliberately simple **punctuality example** shows the complete loop. Suppose some members of a population are more disposed toward temporal regularity. A mythology interprets punctuality as respect, reliability, or honour; schools and workplaces reward it; people then select occupations, friends, and partners for whom it matters. Repeated selection makes the disposition more visible with age and stabilizes institutions built around it. If partner choice, status, migration, or fertility also differs systematically, the arrangement could eventually affect selection pressures. The early cultural and behavioural links can be observed now. The final population-genetic link remains a hypothesis requiring direct evidence; no “punctuality score” is assumed.

The framework includes a **population-history hypothesis**:

Societies with different histories of kinship, religion, institutions, partner choice, migration, and cultural selection may differ partly in dispositional distributions, making the same mythology differently resonant across populations.

This hypothesis is probabilistic and population-level. It does not license deduction from group membership to individual character. Its intended scientific test is prospective prediction of differential response, not retrospective storytelling fitted to any observed difference.

10.1 Worked behavioural-genetic examples and hypothesis ladder The genetic component should not disappear behind ritual cautions. The point of including it is to make risky predictions that can succeed or fail. The following examples range deliberately from established behavioural-genetic observations through mechanism proposals to strong, currently unconfirmed hypotheses.

1. Adoption, body weight, and the location of environment In his account of the Colorado Adoption Project, [Robert Plomin](#) uses body weight to make the shared-environment result visible:

Relationship	Approximate reported correlation for weight
Adopted child ↔ adoptive parent	0
Two unrelated children adopted into one household	0
Adopted child ↔ biological mother	0.3
Biologically related siblings	0.3

Plomin uses the parent–offspring correlation of roughly 0.3 to illustrate an estimate around 60% heritability, because parent and child share about half their segregating DNA. In this example, the remaining variation is environmental, but the shared household contributes little to differences in weight among the adopted children. The result is striking precisely because the adoptive parents put the food on the table.

The mythology-construction interpretation is sharper than “environment is random.” The originating criticism is that behavioural genetics may be looking for systematic environment at the wrong scale. If a bigOther supplies society-wide classifications, aspirations, prohibitions, status systems, and institutions, it may shape nearly everyone without making siblings more alike. Active niche selection can then route genetically different recipients through different regions of the same cultural meta-environment. What appears as non-shared environment at household scale may contain patterned cultural formation at society scale.

Weight is an illustration, not proof of this claim for mythology. Heritability describes variation in a specified population and environment; it does not divide an individual into genetic and environmental percentages. The testable extension is whether measurable cultural pathways explain otherwise residual differences in mythology receptivity.

2. Religious and political belief as a shared-environment exception A loose paraphrase of [Plomin’s discussion in *Blueprint*](#) would say that parents have roughly a “20% chance” of transmitting religious belief. The statistical claim is different: for some religious and political beliefs, shared environment accounts for about **20% of variance**, an exception to the near-zero shared-environment estimates reported for many psychological traits.

That exception points directly toward mythology. Religion and politics are among the domains in which families deliberately name authorities, repeat stories, perform rituals, regulate affiliation, and connect the child to a wider bigOther. The number does not identify a simple parental transmission rate, nor does it prove that the remaining environmental variance is cultural. It shows that socially organized belief can leave a detectable shared-environment signal and makes the larger cultural-meta-environment hypothesis worth testing.

3. Age amplification and active niche construction The strongest documented developmental example is cognitive ability. Plomin summarizes longitudinal adoption, twin, and meta-analytic results in which the heritability of intelligence rises from childhood toward adulthood. A [meta-analysis of longitudinal twin and adoption studies](#) examines this increasing heritability and genetic amplification.

The proposed mechanism is not that DNA changes with age. It is that autonomy increases:

This pattern should not be asserted identically for every trait; Plomin notes that personality and school achievement do not show the same developmental curve as intelligence. Mythology construction turns active niche selection into a direct research question: do initially small differences in mythology receptivity grow as people build lives around congruent identities, institutions, and networks?

4. A polygenic score for individualism and mythology receptivity No validated population polygenic score for “individualism” is assumed here. That absence is not a reason to delete the mechanism; it defines the target.

The strong prediction is:

A useful score must predict response beyond ancestry, demographics, institutions, and self-reported ideology. Failure to do so would count against the genetic-resonance hypothesis. Success would turn genetics from a distal story into an instrument that makes risky prospective predictions.

5. The European individualism-shift hypothesis The historical hypothesis is that Europe did not experience only a free-floating change of ideas. Kinship rules, Christianity, literacy, property, markets, cities, partner choice, migration, and institutions may have created sustained cultural selection for dispositions compatible with individual autonomy and impersonal cooperation. Enlightenment mythology then resonated especially strongly with the population produced by that history and further intensified the process.

The strong version predicts detectable biological change over historical time; the weaker version predicts culturally amplified expression of a stable genetic distribution. Ancient DNA, modern genomic data, demographic history, and rival institutional explanations would be needed to distinguish them.

6. “Old White European Male” as a provocative corroboration heuristic The originating argument deliberately noticed a politically charged pattern. If older European men express an unusually strong individualist orientation—because of population history, sex-linked socialization, age amplification, or some combination—then their condensation into the hostile signifier “**Old White European Male**” may be read as a counter-mythology identifying the human carrier of the individual-sovereignty order it opposes.

Under that interpretation:

This is not confirmation by itself. The same label may encode perceived historical power, wealth, sex, ancestry, or institutional incumbency without tracking a genetic disposition. Its value is as a discriminating hypothesis: does hostility follow demonstrated individualist commitments more closely than age, sex, ancestry, wealth, or office considered separately?

7. Punctuality and assortative niche selection The punctuality example is intentionally mundane. A dispositional preference for temporal regularity encounters a mythology that calls punctuality respect, reliability, or honour. Schools and workplaces reward it. People choose friends, occupations, and partners who share it, while chronic unpunctuality becomes a real relationship cost. Cultural mythology has now altered social and potentially reproductive assortment.

No punctuality gene or score is presumed. The example shows what evidence would be required to move from cultural fit to gene–culture feedback: stable heritability, predictable recipient response, assortative partnering, and downstream differences in migration, status, fertility, or reproduction.

8. Producer and egalitarian-guardian clusters The labels **producer** and **guardian** borrow loosely from the differentiated social functions in [Plato’s Republic](#), but the model is not Plato’s class order, psychology, or theory of rule. **Egalitarian guardian** and the proposed genetic-cluster hypothesis are new formulations in this synthesis. The strong hypothesis is that producer-like and egalitarian-guardian-like configurations may form partially stable and heritable clusters with different mythology preferences.

Proposed configuration	Expected resonant mythology
Producer-like	Contribution, proportionality, property, personal domain, impersonal accounting, maintenance
Egalitarian-guardian-like	Care, vulnerability, anti-dominance, solidarity, protection, deservingness attached to the guardian role

The hypothesis fails if the clusters cannot be measured reliably, do not replicate, prove wholly situational, or do not predict differential mythology response. If twin, genomic, latent-profile, and randomized-receptivity studies converge, the model gains credibility and practical value.

9. Close-kin marriage as reproductive and mythological network design The first-cousin-marriage hypothesis is the most concrete bridge between genetics and social radius. Marriage rules simultaneously decide who reproduces with whom, which families exchange obligations, and which mythologies repeatedly enter one another’s households. The primary research by [Jonathan Schulz](#), [Duman Bahrami-Rad](#), [Jonathan Beauchamp](#), and [Joseph Henrich](#) links Western Church exposure, weakened intensive kinship, and psychological variation; the complete genetic-selection extension remains open.

The strong proposed sequence is:

exclusive clan coupling weakens and non-kin institutions expand
 ↓
 impersonal trust and individualist civic mythology become more resonant
 ↓
 new status, partner-choice, migration, and fertility patterns
 ↓
 possible change in later dispositional distributions

These nine examples form a hypothesis ladder. Adoption and twin designs establish patterns of variance and developmental amplification. Cultural and kinship research identifies plausible mechanisms. Individualism scores, European genetic change, and producer-guardian clusters remain prospective tests. The framework becomes scientific by exposing the ladder, not by hiding its upper rungs because they have not yet been climbed.

11. Population diagnosis and mythology families

A constructor begins by studying the society rather than by polishing a message in isolation.

Population diagnosis asks:

- Which mythologies already organize the field?
- Which moral taste buds and motives do they activate?
- Which causal stories feel self-evident?
- Which identities and authorities possess trust?
- Which institutions embody the current order?
- Which historical wounds, triumphs, humiliations, and obligations remain alive?
- Which real coordination problems require a shared response?
- Which groups can still translate one another's moral language?
- Which proposed practices fit or violate the population's dispositions?

Moral reframing research supplies one limited empirical example of recipient fit. [Matthew Feinberg and Robb Willer](#) found that environmental appeals framed through purity reduced an ideological attitude gap in their experiments. Mythology construction generalizes the design question beyond single messages: how can the same higher-order project be expressed through several morally intelligible variants without becoming incoherent or deceptive?

A heterogeneous society will rarely be coordinated by one perfectly uniform story. It may require a **mythology family**:

shared second-order identity and goal

- care-and-protection variant
- proportionality-and-contribution variant
- loyalty-and-continuity variant
- liberty-and-personal-domain variant
- sanctity-and-stewardship variant

The variants must converge on compatible practices. Reframing becomes dishonest when different groups are promised mutually exclusive outcomes or when the shared term hides an operational contradiction.

The proposed **producer-guardian model** can serve as one test case. A producer-like audience may respond especially to contribution, proportionality, property, personal responsibility, impersonal accounting, and protection from encroachment. An egalitarian-guardian-like audience may respond especially to care, vulnerability, anti-dominance, solidarity, and protective status. These are ideal-typical configurations, not biologically pure human kinds. The research hypothesis is that they may reflect partly stable and partly heritable clusters that predict differential mythology receptivity.

Their constructive relationship is complementarity:

producer → builds, supplies, maintains, and accounts
 guardian → detects threats, protects, and mobilizes against domination
 ↓
 viable society when both remain reality-coupled and mutually bounded

A settlement makes the complementarity concrete. Producers keep food, water, tools, and buildings available every day. Guardians train for fires, attacks, disasters, or abuses that may not occur for years. During a long calm, preparedness can look like privileged idleness; during an emergency, its option value becomes unmistakable. The

reciprocal pathologies are equally visible: a guardian can preserve status by manufacturing threats, while a producer can treat every warning as unproductive overhead. The ideal types are useful when they reveal this functional tension rather than assigning permanent moral worth to social categories.

Their pathological relationship arises when each mythology redescribes the other's function as moral illegitimacy. This example belongs to recipient diagnosis and hypothesis testing; mythology construction itself is not restricted to this political typology.

Mythology grammar and construction

12. Topoi, plot, and articulation

A mythology requires both reusable interpretive units and a causal sequence.

A **topos** is a recurring commonplace, scene, or argument location: the corrupt ruler, the forgotten sacrifice, the innocent child, the cheated worker, the threatened home, the ungrateful beneficiary, the sacred inheritance, the stranger who proves worthy, the bureaucracy that cannot see the person, or the free rider who endangers cooperation. The term is borrowed from [Aristotle's *Rhetoric and Topics*](#), where *topoi* are "places" or headings from which arguments can be found. Its use here is broader and less technical: it includes culturally recurring scenes and moral commonplaces, not only Aristotelian argument forms.

A **plot** or **mythos** organizes such elements through time. The word *mythos* is borrowed from [Aristotle's *Poetics*](#), where it refers to the organization of action in a plot. Here it is extended beyond drama to a society's causal-historical sequence:

```
original condition
↓
loss, violation, discovery, or opportunity
↓
allocation of causal and moral roles
↓
trial, struggle, sacrifice, or construction
↓
restoration, transformation, tragedy, or renewal
```

Topoi permit rapid recognition. Plot supplies direction and expectation. A mythology composed only of topoi produces disconnected emotional triggers. A mythology composed only of plot may remain too abstract to classify ordinary experience.

[Ernesto Laclau and Chantal Mouffe's account of articulation and hegemony](#) is useful here. Dispersed grievances or identities can be linked through an **equivalential chain**, divided from an antagonist, and represented through a partially empty common signifier. Mythology construction borrows these operations without adopting their complete political programme or treating all social unity as nothing but discursive articulation.

An equivalential chain may assemble different experiences under one term:

```
unpaid work
+ arbitrary authority
+ blocked mobility
+ public humiliation
↓ articulated as
"loss of dignity"
```

The common signifier gives the experiences a shared political or moral identity. Its compression is powerful because it reduces coordination costs. It is dangerous because the term can obscure differences in cause, scale, evidence, and remedy.

Construction therefore requires two opposite capacities:

- enough compression for recognition and collective action;
- enough differentiation to prevent a useful ideal type from becoming what [Stanley Cohen](#) called a **folk devil**: a publicly condensed and demonized carrier of social threat.

13. Causal stories

Deborah Stone's "Causal Stories and the Formation of Policy Agendas" explains how conditions become actionable problems through causal classification. Her fourfold scheme distinguishes whether action is guided or unguided and whether consequences are intended or unintended.

Causal story	Basic classification	Characteristic response
Accidental	Unguided action, unintended result	Relief, repair, preparation, resilience
Mechanical	Unguided mechanism, predictable result	Regulation, redesign, maintenance, dismantling
Inadvertent	Guided action, unintended result	Correction, constraint, forgiveness, restitution
Intentional	Guided action, intended result	Blame, punishment, resistance, deterrence

Causal stories do political and moral work because they allocate:

- agency;
- intention;
- responsibility;
- victimhood;
- preventability;
- competence;
- jurisdiction;
- remedy.

The same observable condition can be narrated as fate, accident, negligence, systemic mechanism, hostile design, or unintended consequence. Each story activates different moral taste buds and permissions.

Imagine that a bridge collapses. If an unprecedented lightning strike is presented as the cause, the likely response is rescue and preparation. If routine corrosion predictably weakened the structure, redesign and maintenance become central. If inspectors knowingly ignored warning signs without intending a collapse, negligence and restitution enter the scene. If someone planted explosives, punishment and security become salient. The rubble is the same; the assigned agency, intention, responsibility, and remedy are not. Evidence must decide among the stories rather than moral attraction deciding what counts as evidence.

Stone's contribution is therefore a central component of mythology grammar but not the whole theory. It explains how a mythology turns a condition into a problem with responsible actors and available remedies. It does not by itself explain recipient resonance, genetic variation, psychological gradient, institutional reproduction, or social coupling range.

14. Perception–Context–Permission

The proposed **Perception–Context–Permission** sequence, abbreviated **PCP**, describes how a mythology routes interpretation into action.

PERCEPTION

What kind of event, person, or condition is this?

↓

CONTEXT

What caused it, what history surrounds it, who occupies which role, and which moral dimensions are active?

↓

PERMISSION

What may, must, or must not now be done?

A mythology rarely needs to issue a naked command. If it successfully classifies perception and supplies context, the action can appear self-evidently required.

Consider four different classifications of the same loss:

misfortune → help and insure
negligence → correct and compensate
exploitation → resist and sanction
earned result → accept and learn

The moral disagreement may occur before the explicit value judgment. Two populations can endorse care, justice, and freedom yet prescribe opposite actions because they have placed the event inside different causal stories.

The PCP audit therefore asks:

1. What has been made perceptually salient?
2. What has been excluded from the scene?
3. Which causal story supplies context?
4. Which roles and intentions are assigned?
5. Which moral response is activated?
6. Which action now appears permissible or obligatory?
7. What competing classification fits the evidence?

Where the permitted action grants power to a person, office, institution, or collective, the PCP audit should be followed by the **authorization-payload audit** defined in [Epistemic Agency under Mechanical Solidarity](#). It asks what power is requested, over whom or what, within which jurisdiction, for how long, with what discretion, oversight, revocability, succession, and termination evidence, and whether coordination authority spills into authority to decide what is real. Agreement with the proposed end is not yet agreement with every power packaged as its means.

Wegner's [official Talking Points page](#) states the source maxim that political language should motivate people to entrust their lives to the politician and give that politician power over them. [Epistemic Agency under Mechanical Solidarity](#) preserves the complete German formulation and defines the Culture Mechanics translation: **political language is an authorization bid**. In mythology grammar, relevant structures supply the morally weighted stake, PCP supplies the actionable classification, and the authorization payload identifies the power transfer that acceptance is expected to support.

15. Identity, role, symbol, and permission

Mythologies do not merely explain. They recruit.

An **identity offer** answers:

Who can I become inside this world?

A **role offer** answers:

What can someone like me concretely do?

Identity without role can produce expressive affiliation without capability. Role without identity can feel like arbitrary labour. Durable mythology joins them:

identity: "we are stewards"
+
role: inspect, maintain, teach, repair, and hand forward
↓
repeated practice confirms identity

Important role classes include:

- learner and apprentice;
- builder and producer;
- maintainer and steward;
- guardian and witness;
- parent and ancestor;
- judge and mediator;
- discoverer and truth-teller;
- penitent and repairer;
- teacher and transmitter.

The antagonist role requires special care. A mythology can identify a real obstacle, incentive, institution, practice, or perpetrator. It can also compress many heterogeneous people into a morally licensed enemy. The diagnostic

difference is whether responsibility remains precise, evidence-sensitive, answerable, and limited to demonstrable conduct.

Jacques Lacan's **master signifier**, later adapted in Laclau's political theory, supplies the model for a compact signifier that organizes a wider symbolic field. Mythology construction uses the expression more operationally: a flag, word, saint, martyr, monument, uniform, ritual object, anthem, or remembered event can activate an entire field of classification. This design use is therefore Lacanian-inspired, not identical to Lacan's formal place for S1 in the discourse of the master.

Some such tokens become **ideological conformity signals**: their performance, absence, refusal, or substitution makes a person's relation to the installed program publicly legible and enables monitoring, apparent consensus, recruitment, exclusion, or sanctions. The same token can become a **targeting signal** when its nonperformance exposes a sanctionable outsider; imposed markers and attributed labels can make target status legible without requiring refusal. The authoritative definitions, enforcement–exclusion duality, propagation and enforcement forms, jealousy axis, Andrick bridge, Stanton mapping, and worked examples remain together in *Culture Mechanics*. Mythology construction draws only the design warning: a constructor must inspect whether an intended symbol supports voluntary practice or creates a moralized loyalty test and an expanding claim to jurisdiction.

The **sacred-value** literature developed through Jonathan Baron and Mark Spranca's **protected values**, Philip Tetlock and colleagues' **sacred-value-protection model**, and Jeremy Ginges, Scott Atran, Douglas Medin, and Khalil Shikaki's **research on sacred political conflict**. A sacred object in the present framework defines what must not be casually traded away. This use broadens experimental "sacred values" to include symbols, practices, institutions, places, and relationships. Sacredness can protect dignity, truth, family, law, nature, or peace from opportunistic calculation. It can also block necessary comparison and correction. Construction therefore asks both:

- What must this mythology hold sacred to remain coherent?
- What happens when sacredness prevents the mythology from seeing reality or acknowledging another sacred claim?

16. Participatory discovery and co-authorship

The recipient should not be treated as an empty processor waiting for installation. Listening is part of construction.

Participatory discovery elicits:

- the recipient's own stories and moral vocabulary;
- experiences that do not fit the dominant mythology;
- ambivalence and unresolved contradiction;
- existing role models and admired practices;
- feared losses and desired futures;
- words that carry trust or contamination;
- the costs that would make adoption impossible.

The field experiments reported by Joshua Kalla and David Broockman found that nonjudgmental narrative exchange produced durable attitude change in their studied contexts, whereas closely related conversations without that exchange did not produce detectable effects. The result does not prove a universal mythology-construction method, but it supports **perspective-getting** and self-generated interpretation as promising mechanisms.

Edward Deci and Richard Ryan's **Self-Determination Theory** proposes that autonomy, competence, and relatedness support more integrated motivation. Research summarized in their account indicates that meaningful rationale, acknowledgement of difficulty or feeling, and choice can help people internalize otherwise uninteresting behaviour.

The constructive sequence is therefore:

```
recognition and respectful listening
      ↓
recipient articulates experience and conflict
      ↓
new mythology supplies a possible interpretation and role
      ↓
recipient tests, modifies, and voluntarily endorses it
      ↓
enactment produces competence and further evidence
```

Co-authorship does not mean telling every recipient whatever they want to hear. It means permitting the recipient to understand the operation, judge its reasons, and translate it into lived commitment. A mythology that can survive only through concealment has failed the agency test.

17. Institutional embodiment, activation, and transmission

A mythology becomes culture when the surrounding system repeatedly tells the same story through conduct.

[Edgar Schein's work on organizational culture](#) identifies mechanisms through which leaders embed assumptions: what they attend to and measure, how they respond to crises, how they allocate resources and status, whom they recruit or remove, and what they model and teach. Mythology construction generalizes this insight beyond formal organizations.

Institutional embodiments include:

- calendars that organize collective time;
- rites of passage and remembrance;
- promotion and recognition systems;
- selection into trusted roles;
- legal procedures and appeal routes;
- schools and apprenticeship;
- architecture and public space;
- property and stewardship arrangements;
- professional protocols;
- sanctions and restitution;
- records, archives, and public memory;
- recurring service, maintenance, or protection duties.

Embodiment creates feedback:

Activation occurs when an event resembles an established pattern and calls the installed mythology into action. A crisis, anniversary, violation, victory, death, threat, or opportunity can rapidly transform a latent repertoire into synchronized judgment.

Activation presupposes that enough of the cultural technology remains available. A calm period can conceal three importantly different conditions: living mythology and synchronization practices may be **dormant**; rules and symbols may remain but become affectively **de-animated**; or the transmission and activation system may be **culturally lost**. In the second case, institutions can continue to coordinate habitual conduct while no longer producing *Beseelung*. In the third, a later event cannot simply awaken the old system; actors must construct a successor from surviving fragments, and continuity of vocabulary or ritual does not by itself establish continuity of collective identity.

Mythology construction therefore includes maintenance against cultural forgetting: renewing the connection among words, stories, roles, practices, institutions, felt significance, and lived consequence. Maintenance is not automatically good; it can preserve an open and reality-correctable system or sustain a closed one. Nor is de-animation automatically failure: a once-sacred rule may remain a useful convention after losing its power to mobilize sacrifice. [Epistemic Agency under Mechanical Solidarity](#), “Observability, cultural forgetting, and contemporary witnesses” develops the historical and evidential problem. [Analogical Models in Culture Mechanics: A Semantic Inventory](#) places it inside the weak-field gravity and contemporary-witness analogy.

Transmission travels through more than mass media. Important paths include:

- parents and kin;
- peers and local exemplars;
- teachers, clergy, experts, and prestigious models;
- professional formation;

- stories attached to objects and places;
- institutional routines;
- entertainment and art;
- law, reward, and punishment;
- algorithmic visibility;
- imitation of visibly successful communities.

Transmission is strongest when speech, practice, reward, and consequence converge. A mythology of honesty taught by institutions that reward strategic lying constructs cynicism rather than honesty.

Psychological gradient and drive direction

18. Psychological gradients

Resonance explains why a person enters a mythology. It does not explain what keeps the person moving or where the path leads.

A **psychological gradient** describes the local resistance and reward structure of an interpretive or behavioural path.

A path is **psychologically downhill** when it offers immediate or familiar rewards and when each repetition tends to make the next repetition easier. The reward may be pleasure, but it may also be certainty, innocence, recognition, belonging, anger, blame, catharsis, or escape from responsibility.

A path is **psychologically uphill** when it requires an encounter that the person would otherwise avoid:

- uncertainty;
- delayed gratification;
- truthful feedback;
- injury to self-image;
- responsibility and reciprocity;
- disciplined repetition;
- unglamorous maintenance;
- risk of failure;
- resistance from physical or social reality.

Gradient is not identical to moral value. A constructive habit can become easy after formation. A destructive fanatic can endure extreme hardship. Rest and pleasure can replenish life; hardship can be pointless. Two separate questions must therefore be asked:

1. **Gradient:** How much immediate resistance does the path encounter?
2. **Direction:** What does repeated movement along the path cumulatively create or destroy?

19. Psychologically downhill and Lacanian death-drive mythologies

The elementary downhill mechanism uses **death-drive in Jacques Lacan's sense**, together with his vocabulary of **desire, demand, jouissance, repetition, and drive**. The principal sources are *The Seminar, Book XI: The Four Fundamental Concepts of Psychoanalysis* and "*Position of the Unconscious*" in *Écrits*. Freud remains the historical precursor, but the operative concept here is Lacan's reworking of the death-drive.

In this usage, death-drive is not a biological instinct that simply seeks literal death, nor is it synonymous with aggression. It names the excessive and repetitive aspect of drive: the circuit returns around its impasse, satisfaction attaches to the circuit itself, and repetition persists beyond the pleasure or stated goal it was supposed to serve. Lacan's compressed formulation is that "every drive is virtually a death drive." A death-drive mythology accordingly reproduces itself through the failure, grievance, demand, transgression, or destructive jouissance it repeatedly generates.

The exact mythology-construction sequence below is a cultural application of that Lacanian structure rather than a clinical formula stated by Lacan. In particular, the contrast between open desire and renewable demand is an operational model of mythological capture.

Open-ended desire can sustain exploration, vocation, relationship, creation, and movement toward an object that is never fully reducible to possession. A mythology can capture that openness by naming one supposedly final object:

open and mobile desire
↓
mythology names the missing object
↓
"obtain X and the lack will close"
↓
desire becomes a demand

The demand creates a renewable loop:

demand fulfilled
↓
brief satisfaction
↓
disappointment or boredom
↓
next demand

demand frustrated
↓
grievance and blame
↓
intensified demand

In both branches, failure of the promise can reproduce the mythology. The object changes while demanding, accusing, anticipating, and repeating become the stable activity.

This is the **death-drive turn** in the present framework:

Repetition no longer serves a destination; repetition becomes the destination.

The participant may receive jouissance from:

- demanding and accusing;
- experiencing betrayal;
- sharing indignation;
- identifying an inexhaustible enemy;
- receiving moral recognition for frustration;
- punishing a supposed obstacle;
- anticipating a completion that must never quite arrive;
- reenacting a familiar wound.

Downhill does not mean cheerful. A painful state can be downhill when it has become familiar, identity-confirming, socially rewarded, and easier than change.

The psychological attractor basin Repeated reward reshapes the landscape:

easy entry
↓
immediate affective or social reward
↓
habit and identity
↓
social reinforcement
↓
loss of alternative skills and relationships
↓
higher cost of exit
↓
deeper repetition

The mythology becomes a psychological potential well. A moment of doubt or insight may move the person temporarily, but old relationships, rewards, fears, and routines pull the person back.

Related downhill mechanisms Catharsis without transformation

anger → discharge → immediate relief → no durable creation

Recognition without production

The image of contribution earns status while difficult production, maintenance, or learning is avoided.

display → recognition → repeat display

Interpassivity

Robert Pfaller's **interpassivity**, developed from a Lacanian line of thought also associated with Slavoj Žižek, means delegated consumption or enjoyment: another person, machine, or ritual enjoys in one's place. The present framework borrows that mechanism but extends it to delegated moral and political performance: another person, institution, avatar, ritual, or post acts, believes, mourns, or rebels on the participant's behalf. This broader use should not be mistaken for Pfaller's complete theory.

Paramorality

The term is borrowed from Andrew M. Łobaczewski's *Political Ponerology*, where *paramoralism* names morally suggestive language that serves pathological or deceptive ends. Łobaczewski's wider theory is controversial and is not adopted here. **Paramorality** is used more narrowly for an observable semantic operation: aggression, envy, irresponsibility, or vandalism is reclassified as care, justice, liberation, authenticity, or resistance. The drive receives gratification while the bigOther supplies moral approval.

Effort concealment

Stories display achievement while omitting training, repetition, failure, compromise, and maintenance. Recipients then experience effort shock when reality refuses the promised ease.

Collective downhillness

The group converts a private symptom basin into a distributed cultural attractor.

20. Psychologically uphill and Lacanian life-drive mythologies

Life-drive is likewise used in a Lacanian sense. In *Seminar XI*, Lacan treats the distinction between life-drive and death-drive as two aspects manifested by drive, not as two independently operating substances or a simple opposition between biological survival and biological death. The two aspects remain structurally entangled: the same drive can bind, create, and sustain a form while also acquiring a repetitive, excessive, or self-consuming circuit.

At the cultural level, a **life-drive mythology** organizes drive through symbols, limits, practices, relationships, and sublimations toward the building, binding, repair, reproduction, and transmission of life-supporting forms. This constructive cultural criterion is the present framework's operationalization of the Lacanian life-drive aspect; it should not be mistaken for a claim that whatever preserves biological life is therefore life-driven.

Its characteristic movement is:

↓

creation, maintenance, and transmission

Life-drive outcomes include:

- bodily and psychological health;
- skill and craftsmanship;
- truthful knowledge;
- trustworthy relationship;
- family and care across generations;
- maintained infrastructure;
- productive enterprise;
- ecological stewardship;
- institutions capable of learning;
- protection without predation;
- a world made more inhabitable for successors.

The uphill path can hurt locally because it exposes limitation, dependency, ignorance, and failure. It remains life-directed when the difficulty creates capabilities and relationships that expand later possibility.

A life-drive mythology gives difficulty an intelligible place. It can make:

- restraint honourable rather than humiliating;
- truthful correction a mark of integrity;
- patience part of mastery;
- maintenance visible as stewardship;
- contribution a source of justified pride;
- protection a disciplined duty rather than licensed aggression;
- posterity more meaningful than immediate consumption.

21. Sublimation and moral formation

Sublimation is the central transformation between raw drive and civilizational capability. The concept comes from [Sigmund Freud's psychoanalytic account of civilization and drive transformation](#), although its use here is extended from individual psychodynamics into an institutional theory of moral formation.

Sublimation neither denies nor simply releases the original drive. It gives the energy another form:

Raw energy or impulse	Possible sublimated form
Aggression	Courage, protection, disciplined competition
Status desire	Excellence, achievement, honourable service
Self-interest	Reciprocity, contract, trade, and accountable enterprise
Curiosity	Science, scholarship, exploration, and craft
Sexual and possessive energy	Courtship, fidelity, family formation, and generative care
Desire for control	Planning, stewardship, administration, and lawful authority
Sensitivity to insult	Courtesy, tact, self-command, and conflict resolution
Group loyalty	Citizenship, service, and responsibility for a common world
Restlessness	Initiative, invention, and disciplined adventure

The **psychological-alchemy analogy** captures the transformation: sublimation attempts to turn inner “lead” into social “gold.” The aggression, ambition, curiosity, sexuality, or sensitivity is not imagined away. Its energy is refined through limits, symbols, practice, and responsibility until it can perform work that raw discharge could not.

Civilization depends upon a **bundle of shared sublimations**:

courtesy
+ honesty
+ temporal discipline
+ reciprocity

- + delayed gratification
- + evidential standards
- + lawful conflict resolution
- + responsibility

civilizational character

Politeness formulas, turn-taking, punctuality, promise-keeping, due process, evidence, citation, protocol, and professional discipline can be understood as institutionalized sublimations. They store ways of transforming drives so that strangers can cooperate without a perfect system or constant supervision.

Formal institutions cannot substitute completely for character. Courts require people willing to tell unwelcome truths. Science requires investigators capable of relinquishing favoured claims. Contracts require some fidelity beyond immediate advantage. Democracy requires losers who remain members of the constitutional community.

Thomas Sowell’s *A Conflict of Visions* captures the constrained-vision account with the deliberately sharp image that each new generation arrives as an invasion of civilization by “little barbarians” who must be civilized before it is too late. The point is not contempt for children. It is that no newborn inherits courtesy, self-command, truthfulness, punctuality, reciprocity, or work discipline in finished cultural form. Each generation must be initiated into the braid through largely unarticulated example, correction, practice, and expectation. Where formation does not take, a formally perfect system cannot compensate indefinitely for the missing character of its participants.

The originating formulation carries a harder consequence: people in whom this civilizing process does not take—because the formation was weak, because the surrounding mythology rewarded the opposite, or because the person resisted it—can become sources of antisocial conduct, of which crime is only one form. Mythology construction therefore concerns not decorative cultural refinement but the intergenerational production of adults capable of sustaining a cooperative civilization.

The formative sequence is:

Cultural sublimation architecture The formative sequence describes a process. It should not be collapsed with the durable cultural structure that makes the process recurrent or with the symbol that calls the structure to mind:

Analytical level	Meaning
Raw drive	Energy or impulse available for direction
Sublimation	The transformation process through which that energy receives another form
Sublimated form	A resulting capacity, character disposition, relationship, practice, role, or institution
Cultural sublimation architecture	The durable mythology-bearing arrangement that selects, teaches, rewards, embodies, and transmits shared sublimations
Symbolic carrier	A phrase, story, song, hero, ritual, image, or exemplary act that activates relevant installed programming

A **cultural sublimation architecture** is the interlocking body of mythologies, limits, exemplars, roles, practices, systems, rewards, sanctions, institutions, and transmission pathways through which a culture

recurrently transforms raw drives into character, capability, relationship, creation, maintenance, and posterity.

The architecture is **generatively central** when many downstream structures depend upon the capacities it recurrently produces. Courts, science, contracts, families, professions, markets, infrastructure, and constitutional government can all depend upon different combinations of truthfulness, self-command, reciprocity, delayed gratification, courage, care, and responsibility. Calling the architecture *root-level* therefore makes a proposed claim about causal dependency, not about metaphysical primacy, automatic moral goodness, or an unchangeable historical form.

Generative centrality remains distinct from felt relevance. A mythological lens may treat a particular family, institution, or outcome as morally important while failing to represent the formative architecture upon which its continuity depends. A contrary case is also possible: an inherited formation system may receive great reverence while producing little legitimate capability or while preserving coercion, falsehood, or subjecthood absorption.

```
cultural sublimation architecture
    ↓ recurrent formation
character + capability + relationship + disciplined practice
    ↓ enable
families + professions + science + law + production + political order
    ↓ reproduce, neglect, correct, or consume
the architecture handed to the next generation
    ↻
```

One important failure pattern is therefore:

```
high generative centrality
+ low felt relevance or active moral suspicion
→ weakened protection, practice, and transmission
→ continued consumption of inherited capabilities
→ delayed downstream institutional failure
```

This pattern is a hypothesis requiring independent measures of dependency, formation, transmission, and consequence. It must not be inferred merely because an inherited practice has declined.

Symbolic condensation and counter-mythological reprogramming Viewed through Wegner's compression and decompression language, a culturally recognized representation of a sublimation can stand in for the larger "machinery" behind it. A short phrase, song, hero, ritual, or exemplary practice can evoke a much larger complex of discipline, purpose, honour, roles, institutions, and expected conduct. **Sublimation emblem** is retained as a Wegner-facing explanatory shorthand for this condensed representative function, not as a new canonical culture-mechanical object type and not as a claim that Wegner himself formulated the present sublimation theory.

In Culture Mechanics language, the carrier is normally an ideological symbol, activation device, master-signifier-like token, or compressed fragment of mythology. It does not contain the sublimation process or architecture. It activates mappings already installed in the mythological lens, and the local bigOther applies those mappings to produce culturally learned sentiments and motivation:

```
symbolic carrier
    ↓ activates
installed mythologies and lens mappings
    ↓ executed by
local bigOther
    ↓
honour / shame / attraction / aversion /
belonging / obligation / permission
    ↓
practice and public conduct
```

A rival or cynical mythology can attack the reproduction of a shared sublimation by reclassifying the practice through which it is embodied. The central intrapersonal target is not a freestanding decoder or prestige system. It is the programming of the mythological lens:

```
incumbent mythology:
effort or restraint → contribution, capability, honour
```

↓ rival causal and moral story

effort or restraint → exploitation, foolishness, conformity, futility

↓

symbols and stories activate the rival classification

↓

repetition + systems + rewards + sanctions + observed conduct

↓

reinforcement or reprogramming of the mythological lens

↓

local bigOther supplies changed sentiment and motivation

↓

changed practice, Beseelung, and intergenerational transmission

Illustrative carrier contrast: shared work and pause The originating project example contrasts two short German carriers:

“Jetzt wird wieder in die Hände gespuckt”

and

“Mach mal wieder Pause.”

For a suitably programmed recipient, the first can activate a larger mythology of shared exertion, productive contribution, competence, renewed effort, and collective purpose. The second can activate interruption, relief, release from demand, or withdrawal from exertion. Their importance for this example lies not in their literal propositions but in the larger sublimation-related complexes they can call:

"Jetzt wird wieder in die Hände gespuckt"

↓ possible activation

shared work → contribution, capability, honour, common purpose

"Mach mal wieder Pause"

↓ possible activation

interruption → relief, release, distance from exertion

The proposed attack hypothesis is that an actor seeking to weaken an inherited culture could try to make the second kind of carrier displace, ridicule, or reclassify the first, supporting that substitution with counter or cynical mythologies. If repeated through admired exemplars, systems, rewards, sanctions, and observed conduct, the intervention could help reprogram the lens through which effort and its supporting structures are classified:

incumbent carrier activates an inherited sublimation

↓

counter-carrier and cynical mythology reverse its classification

↓

earnest effort becomes naïve, manipulated, or embarrassing

↓ repeated cultural reinforcement

possible reprogramming of the mythological lens

↓

weaker Beseelung, practice, and transmission

This is a project-supplied illustration, not empirical evidence that either phrase has one invariant meaning, that a pause is culturally destructive, or that any historical use constituted a coordinated attack. Context, audience programming, institutional support, repetition, actual consequences, and evidence of intention must be assessed separately.

Prestigious exemplars, ridicule, rewards, sanctions, and visible consensus matter because they are programming and reinforcement channels. The codec perspective remains useful for showing how a small token recruits a much larger installed complex, but it must not install an additional decoder beside the main CPU and local bigOther. Ordinary cognition reconstructs the represented situation; the local bigOther executes the installed lens that culturally classifies it.

Cynicism has a distinctive corrosive possibility. A direct rival can say that an ideal is wrong and offer another. Cynicism can instead make sincere aspiration, discipline, gratitude, or service appear naïve, manipulated, or embarrassing

without accepting the burden of a functional replacement. In that case it can reduce *Beseelung* and transmission before a successor architecture exists. This is one specific route into the broader failure mode of [polemical corrosion](#).

Several boundaries are essential:

1. A single signal ordinarily activates installed programming. Durable change requires reinforcement or reprogramming; an incompatible governing classification requires sufficient unbraiding and rebraiding under the single-slot principle.
2. Rest, play, contemplation, celebration, and resistance to exploitation can themselves be constructive sublimations or necessary conditions for durable capability. Exertion is not good merely because it is difficult.
3. Inherited sublimations can organize disciplined persecution, compulsive work, falsehood, domination, or subjecthood absorption. Corrective mythology and constructive resublimation must not be classified as corrosion merely because they weaken an incumbent practice.
4. Observed de-animation does not establish a deliberate attacker. Purposive cultural-program conflict, commercial selection, institutional hypocrisy, endogenous drift, justified criticism, and unintended consequence are rival causal explanations.
5. High *Beseelung* establishes affective animation, not truth, legitimacy, reality coupling, person-preservation, or flourishing.

22. Mythology as the education of psychological taste

The contrast between a very sweet drink and acquired tastes such as olives or dry wine supplies a developmental analogy.

Psychological childhood prefers intense, immediate, uncomplicated sweetness:

- gratification without delay;
- moral importance without achievement;
- certainty without inquiry;
- recognition without production;
- benefits without reciprocal cost;
- redemption without transformation;
- an enemy who explains every frustration.

Psychological adulthood learns to value complexity, restraint, responsibility, mastery, truth, and creation. Here adulthood names a developmental achievement rather than chronological age.

A civilizational mythology must therefore perform two operations:

meet the recipient where existing desire can recognize an entry

↓

lead that desire toward a more mature and generative form

Mythology construction is not merely taste matching. It is also taste education.

A mythology that maximizes present resonance without considering formation resembles a market that sells children the sweetest available drink. It can win immediate adoption while reducing the capacity to appreciate demanding goods. A formative mythology begins with available motives but attaches honour, belonging, and status to disciplines that expand the person.

If unlimited sweetness is supplied for long enough, the problem deepens: ordinary reality begins to taste intolerably bitter. Work, compromise, waiting, correction, and reciprocity then feel not merely difficult but like illegitimate deprivations. Taste education therefore changes both what is desired and what kinds of frustration can be borne without retreating into a downhill story.

[Herbert Marcuse's *Eros and Civilization*](#) represents one important dispute over sublimation. Marcuse distinguishes repression necessary to association from historically contingent "surplus-repression" and imagines less repressive sublimation. The present framework asks whether practices classified as surplus-repression may contain tacit civilizational knowledge and whether their removal produces liberation, constructive resublimation, or psychologically downhill desublimation. Marcuse is an illustrative case, not the foundation of the uphill/downhill distinction.

Marcuse as a linguistic dark artist The originating judgment of this framework is sharper. Read operationally, Marcuse's liberation tends toward **liberation from civilization**: liberation from arts, habits, work discipline, sexual restraint, courtesy, authority, and moral formation insofar as these are reclassified as repressive sublimations.

Marcuse understands his project as liberation of civilization from historically unnecessary domination. The present framework's verdict is that the attempted separation of necessary repression from "surplus-repression" can dismantle the inherited bundle of sublimations on which mature freedom depends.

```
inherited restraint and discipline
    ↓ Marcusean classification
surplus-repression serving domination
    ↓
liberation authorizes removal of the restraint
    ↓ possible result
immediate gratification and desublimation
    ↓
weaker character, capability, and institutional maintenance
```

Marcuse is also treated here as a master practitioner of linguistic dark arts. The reading rule is not that every word has a mechanically inverted dictionary meaning. It is that an attractive moral noun may retain its emotional halo while a qualifier reverses the operation performed in its name.

His essay "[Repressive Tolerance](#)" supplies an unusually clear example. Ordinary tolerance permits opposed views to exist and compete. Marcuse reclassifies that general tolerance as repressive, then explicitly defines **liberating tolerance** asymmetrically: intolerance toward movements of the Right and tolerance toward movements of the Left. The vocabulary of tolerance remains; the operational payload includes withdrawal of tolerance from selected speech, assembly, opinion, and movements.

```
ordinary moral meaning
tolerance → permit opposed views
    ↓ ideological qualification
general tolerance → "repressive tolerance"
    ↓ moral inversion
tolerance now reproduces oppression
    ↓ action permission
selective intolerance becomes justified
    ↓ semantic relabelling
selective intolerance → "liberating tolerance"
```

This yields the **qualified-concept alarm**:

When an otherwise clear and morally attractive concept receives an ideological qualifier, stop reading fluently. Translate the qualified expression into concrete actors, actions, permissions, and prohibitions.

The audit asks:

1. What did the unqualified word ordinarily mean?
2. Which cases has the qualifier removed from that meaning?
3. Which contrary operations has it introduced?
4. Who decides when the qualifier applies?
5. Is the revised rule symmetrical between allies and opponents?
6. What may now be done that the ordinary concept would have forbidden?

The governing distinction is:

SEMANTIC WRAPPER

```
tolerance, liberation, autonomy, humanity
    ↓ inspect
```

OPERATIONAL PAYLOAD

```
who may speak, who must yield, who decides,
which restraint is dismantled, and who may be suppressed
```

This case matters to mythology construction because the qualifier rewrites PCP:

```
PERCEPTION  existing tolerance is not genuine tolerance
CONTEXT      the public sphere is already an instrument of repression
PERMISSION   suppressing selected views becomes an act of liberation
```

The dark art does not merely lie about a fact. It captures a prestigious word, reverses its permissions, and makes the reversal feel like fidelity to the original virtue.

23. Replicative success versus flourishing

A mythology can be fit as a replicator and destructive for its carriers.

high resonance
+ immediate psychological reward
+ strong group enforcement
+ self-sealing causal story

rapid cultural replication

rapid cultural replication
does not imply
truth, agency, capability, prosperity, or survival

Mythology construction therefore distinguishes at least three success criteria:

1. **Replicative success:** Does the mythology spread and persist?
2. **Carrier success:** Do participants become more capable of flourishing, relationship, creation, and reality contact?
3. **System success:** Does the society maintain cooperation, correction, material viability, and intergenerational continuity?

A death-drive mythology may optimize the first while consuming the second and third. A constructive mythology must become culturally viable without sacrificing the people and institutions that carry it.

The governing contrast is:

gratification that consumes the future
versus
disciplined transformation that creates a future

Social coupling, scale, and collective agency

24. Coupling strength and coupling radius

A mythology can resonate intensely and still fail to support a society. Population-scale construction must consider not only the strength of a bond but the distance across which it remains effective.

The physical analogy uses two parameters:

- **coupling amplitude:** how strong obligation, trust, identification, and emotional synchronization are at close range;
- **coupling radius:** how far those bonds extend across kinship, locality, class, religion, profession, and subculture.

clan-like order
high local amplitude + short radius
thick trust within, steep decay beyond

civic order
lower peak amplitude + long radius
thinner but generalized trust among strangers

The analogy is functional, not a claim that social bonds obey a literal physical force law.

Strong short-range coupling can sustain extraordinary sacrifice and mutual aid. It can also make impartial law, public office, and cooperation with outsiders difficult. Wider coupling supports markets, cities, professions, universal religions, federations, and citizenship, but may feel emotionally thinner and require institutional reinforcement.

At short range, the distinction can be felt in an ordinary emergency. A person may be able to summon several relatives at midnight with no written agreement while feeling little duty toward an unknown neighbour. A civic order asks for something less intimate but more extensive: predictable restraint, assistance, truthful dealing, and respect

for common rules among millions of people who will never become kin. The first bond is thick and concentrated; the second is thinner but travels farther.

Mythology participates in this topology. Clan-centred mythology emphasizes ancestry, blood, honour, concrete loyalty, and remembered reciprocal obligation. Wide-net mythology emphasizes shared law, office, contract, universal dignity, citizenship, profession, or stewardship of a common world.

A constructor must therefore ask:

- At what social radius must cooperation occur?
- Which inherited bonds will support it?
- Which bonds will experience it as betrayal?
- Can a wider identity incorporate local loyalty without abolishing it?
- Does the mythology create bridges or only intensify one cluster?

25. Marriage rules as gene–culture coupling mechanisms

Marriage rules—including rules permitting, preferring, or forbidding first-cousin and other close-kin marriage—are unusually powerful culture strategies because they alter three networks simultaneously.

Reproductive network Marriage affects who reproduces with whom, influencing relatedness, gene flow, population structure, and long-term selection pressures.

Social network Marriage creates alliances, obligations, inheritance paths, and recurring cooperation between families. Endogamy concentrates these connections; exogamy distributes them.

Mythological network Marriage determines which households repeatedly exchange stories, rituals, authorities, customs, moral concepts, and identities.

The proposed **marriage-mediated coupling-range hypothesis** is:

prohibition of close-kin marriage
↓
partners sought beyond the immediate clan
↓
gene flow and alliances cross clan boundaries
↓
exclusive kinship coupling weakens
↓
social and mythological coupling reaches farther
↓
non-kin institutions become more useful and intelligible
↓
abstract civic identity becomes more plausible

One out-marriage creates a single bridge between two family clusters. Repetition across households and generations turns isolated bridges into a mesh through which obligations, stories, practices, and genes travel. The point is not that affection must become weaker in every individual marriage. It is that exclusive social closure around one dense kin cluster becomes harder to maintain when reproduction and alliance repeatedly cross its boundary.

The reverse hypothesis is:

preferred close-kin marriage
↓
reproductive and social relations remain concentrated
↓
dense genetically and socially interrelated clans
↓
strong local obligation and short-range trust
↓
mythologies circulate mainly within the clan

↓

first-order mechanical solidarity remains dominant

Jonathan Schulz, Duman Bahrami-Rad, Jonathan Beauchamp, and Joseph Henrich connect Western Church exposure, weakened intensive kinship, and global psychological variation. Their work supplies important prior evidence for investigating this mechanism; it does not by itself settle every causal step, genetic consequence, or application proposed here.

The genetics link is essential to the hypothesis. Marriage rules do not merely teach wider cooperation. Across generations they organize reproductive population structure while the resulting alliances alter cultural learning and institutional selection. They are therefore a direct gene–culture coupling mechanism.

26. First-order and lifted mechanical solidarity

Émile Durkheim uses **mechanical solidarity** for cohesion through likeness and a strong common consciousness, and **organic solidarity** for cohesion through differentiated interdependence.

The proposed term **first-order mechanical solidarity** names solidarity in which members share concrete rules and answers. **Lifted mechanical solidarity** names solidarity in which they share the rules that generate, select, apply, and revise concrete answers:

fixed meta-rules M + current knowledge or inputs K_t + situation $C \rightarrow$ binding first-order output $R_t(C)$

Fixed means operatively installed and binding, not eternal. Generator and outputs are parts of one operative weave. A large body of detailed rules followed as self-compulsorily proper is strong evidence of predominantly first-order solidarity, but not its definition. A lifted order can also generate many detailed rules; its binding sameness lies in the generator. *Epistemic Agency under Mechanical Solidarity* contains the concrete religious, anthropological, hygienic, legal, market, scientific, and procedural cases.

Lifting often permits people to reach different first-order answers while remaining members of one order. It may therefore support plural lives, division of labour, impersonal authority, and bounded jurisdictions. Those are important possible consequences of the generator architecture, not its definition. The mechanical element has not disappeared: participants are alike in treating the answer-generating rules as binding.

Under single-slot exclusivity, both forms can produce **full capture**: one operative weave completely occupies the local bigOther. First-order full capture governs through shared concrete answers. Lifted full capture governs through one shared answer generator. That generator may have universal jurisdiction and may produce plural first-order outputs and bounded authorities. Whether either capture is open and corrigible or closed and pathological is a separate axis.

This solidarity must be mythologically constructed and ritually renewed. A constitution printed on paper cannot by itself make losing an election non-existential, public office non-proprietary, or an opponent legitimate.

Authority migration across levels of solidarity The movement from first-order to lifted solidarity may also change **who may speak for the bond**. This is an authority-scaling hypothesis, not part of the order-level definition. First-order fields are predicted to concentrate more apologetic and polemical authority in embodied persons, whereas lifted fields can locate more of it in persistent offices and institutions represented by replaceable human beings. The lifted order does not eliminate persons; it can change the source and continuity of the authority they carry.

This migration does not move universal jurisdiction from a person into one all-powerful institution. The lifted meta-order is universal over the allocation and limitation of jurisdictions; courts, universities, parliaments, churches, professions, and public services represent and administer bounded parts of it. No one office thereby owns all interpretation, still less reality itself. A persistent institution can act across generations without receiving epistemic sovereignty.

This proposed migration also changes actor selection. A first-order field is predicted to select more through personal embodiment of its concrete answers; a lifted field can select through demonstrated competence within its procedures and offices. Both remain mixtures of disposition and collective recognition. Neither personal nor institutional authority becomes systemically operative through private declaration alone.

A pathological transition can combine the disadvantages of both forms: institutional power without impersonal procedure, or personal charisma concealed behind institutional language. The design question is therefore not simply whether persons or institutions act, but whether authority, selection, succession, and correction fit the scale and content of the solidarity being defended.

Lifting is consequently one form of successor mythology construction. It unbraids the finality of shared concrete answers and rebraids one shared generator that can produce, apply, and revise answers. The successor may govern universally and may retain old material as inputs or current outputs. It is not an exception to complete slot occupancy or to unbraid/rebraid replacement.

27. Democracy export as a resonance problem

Liberal democracy presupposes more than ballots and institutions. Its mythology includes:

- the autonomous citizen;
- equality before impersonal law;
- loyal opposition;
- peaceful transfer of power;
- freedom of conscience;
- the right of political losers to remain full members;
- public office as a temporary trust rather than clan property;
- abstract reciprocity among strangers.

A ballot box can be manufactured, shipped, and installed. **Loyal opposition cannot be shipped in the same crate.** The latter depends upon a formed expectation that losing office does not expel a person or group from the moral community, that public power is temporary, and that an opponent can remain legitimate while being wrong. Democracy export fails when the visible operation arrives without the state of character and shared mythology from which the operation makes sense.

The **democracy-export hypothesis** is:

Democratic institutions will remain fragile when the lifted civic mythology that makes them intelligible fails to resonate with the receiving population's dispositional distribution, inherited culture, kinship topology, and authority structure.

Under mismatch, imported forms can be assimilated into older solidarities:

election	→ census of clans or sects
party	→ patronage vehicle
public office	→ property of the victorious group
opposition	→ betrayal
electoral loss	→ existential dispossession
law	→ instrument of relational power

The visible operation has been transmitted, but the state from which the operation makes sense has not.

The stronger genetic version predicts that populations may differ partly in the distribution of polygenic dispositions supporting impersonal trust, individual autonomy, pluralism, non-kin cooperation, and tolerance of legitimate disagreement. This remains a direct research hypothesis, not a claim that a population is biologically incapable of democracy.

The genetic-hardware hypothesis The blunt originating formulation should not be hidden:

Some genetic hardware may not be made for lifted mechanical solidarity.

“Not made for” does not mean metaphysically incapable. It means that the historically formed distribution of dispositions in one population may make an abstract civic mythology run naturally, while another population must spend far more institutional and formative energy to maintain the same operation.

The relevant candidate hardware includes dispositions affecting:

- autonomy from kin and inherited authority;
- trust in strangers and impersonal procedure;
- willingness to separate office from family possession;
- tolerance of moral and religious pluralism;
- acceptance of abstract rather than face-to-face reciprocity;
- ability to lose power without treating loss as expulsion from the community;
- willingness to regard an opponent as wrong but legitimate.

The software analogy is exact enough to be useful. The democratic procedure is an operation; lifted solidarity is part of the state from which the operation makes sense; dispositional distributions are part of the hardware on which that cultural state must run.

same imported democratic operation

↓

hardware and mythology fit

→ loyal opposition, impersonal office, peaceful succession

hardware and mythology mismatch

→ clan census, patronage, winner-takes-all possession, existential defeat

The test is comparative and prospective. If measured dispositions or future polygenic scores predict which populations and individuals sustain lifted-solidarity practices under otherwise similar institutions, the hardware hypothesis gains support. If institutional history and current incentives exhaust the prediction, its genetic component loses support.

Institutional coadaptation may bridge the mismatch through federalism, communal autonomy, local self-government, power sharing, customary institutions, and gradual construction of an overarching civic mythology. Such arrangements coordinate existing solidarities while a wider one develops.

28. Coordination, synchronization, and the coupling thermostat

Collective agency does not require everyone to think, feel, or act identically.

Coordination and synchronization are the two ends of a single continuum of interaction strength.

Coordination arranges differentiated contributions toward a compatible result. **Synchronization** aligns timing, attention, feeling, interpretation, judgment, or action. Here **interaction strength** primarily means pressure toward common phase or response, not the total functional dependence among specialists. The continuum is an ideal-typical reader model: real groups can combine differentiated roles with temporary synchrony, and specialist measurement may require several variables without replacing this governing picture.

Three **crowd modes** make the continuum vivid:

Crowd mode	Organizing pattern	Characteristic strength	Example and boundary
Random crowd	Shared space without a common task; weak coupling for the variable under study	Heterogeneity and mere co-presence	Saturday shoppers in a plaza; they are not literally statistically independent in every respect
Clockwork crowd	Differentiated roles routed through handoffs, or independent estimates externally aggregated	Functional interdependence in the routed form; error-cancelling variety in the aggregative form	A pit crew is routed clockwork; a stock-prediction tournament is aggregative clockwork only when an external mechanism combines the entries
Laser crowd	Alignment around when and how to attend, feel, interpret, judge, or act	Speed, force, courage, shared attention, rhythm, and coherent action	A chanting stadium, military drill squad, ritual assembly, or flock-like turn; synchrony alone does not establish truth or collective agency

The clockwork family therefore contains two mechanisms. **Routed clockwork** needs interfaces, handoffs, and controlled communication among differentiated roles; it can have high functional dependence and should not be described as thriving on minimal cross-talk in every respect. **Aggregative clockwork** preserves independence among contributors so that dispersed, approximately unbiased errors can cancel when an external mechanism combines their outputs. The whole aggregation system is clockwork-like, but the contributors alone need not be a strongly coupled crowd.

The project-developed Durkheimian correspondence is:

organic solidarity ↔ clockwork coordination
mechanical solidarity ↔ laser synchronization

The relation is resemblance and characteristic affinity, not identity. Organic solidarity is cohesion through differentiated interdependence; clockwork is an organizational mode. Mechanical solidarity is cohesion through shared classifications and sentiments; laser synchronization is a dynamic process. Both solidarities can coexist. [Epistemic Agency under Mechanical Solidarity](#), “Crowd modes, collective effervescence, and Durkheim’s solidarities,” gives the fuller sociological treatment.

Lifted mechanical solidarity can supply the common moral or constitutional protocol under which differentiated clockwork roles remain legitimate and mutually intelligible:

The laser moment periodically regenerates the moral protocol used by the clockwork system.

Some tasks require both modes; others become less intelligent when synchrony suppresses independent perception.

too little common meaning
→ fragmentation and inability to act together

too much synchronization
→ conformity, common-mode error, and loss of correction

viable coupling
→ sufficient shared meaning for cooperation
+ sufficient independence for perception and learning

The **coupling thermostat** is the mythology-construction problem of calibrating this balance.

Useful synchrony can provide:

- courage under danger;
- rapid emergency action;
- ritual solidarity;
- shared attention;
- confidence that others will perform complementary duties.

Excessive synchrony can produce:

- emotional escalation;
- identity fusion and, when generalized across jurisdictions, subjecthood absorption;
- suppression of minority perception;
- synchronized institutional error;
- inability to change course without collective humiliation.

A society-wide mythology should normally synchronize high-level identity and constitutional procedure more strongly than detailed empirical judgment. It should enable people to act together without requiring them to see every fact through one authorized lens.

The coupling thermostat is a project-developed engineering metaphor and research programme, not an established device or Santa Fe Institute framework. The Santa Fe Institute’s call for a “[crisis discipline](#)” of [global collective behavior](#) emphasizes that technology changes information flow at global scale while its functional consequences remain poorly understood. It does not document a system that senses a universal synchrony parameter and uses AI to steer stadium-scale crowds.

An operational thermostat would require at least:

1. **sensors** for task-relevant states such as synchrony, functional dependence, error, diversity, confidence, and common-source dependence;
2. a task-specific **target range**, because no synchrony level is optimal for every purpose;
3. an **actuator**, such as changing information visibility, timing, group composition, or access to an independent counter-idea;
4. a **controller** connecting the observed state to intervention;
5. **evaluation** of accuracy, stability, displacement effects, and unintended feedback;

6. **constitutional limits** determining who may select the target, operate the controller, inspect it, contest it, and stop it.

Real-time social-signal meters and platform interventions can supply components of such a system. They do not establish a validated, task-general, or ethically legitimate coupling thermostat.

That qualification does not mean the component research is merely hypothetical. Several neighboring programmes now occupy different layers of the problem:

Research layer	Representative work	Contribution to mythology construction
Stewardship and adaptation	Bak-Coleman et al. (2021) , Galesic et al. (2023) , and Lee, Krakauer, and Flack (2024)	Treat information architecture as consequential, relate social-learning strategies and network structures to changing problems, and model how an adaptive system should match its learning timescale to environmental change; the last result is a distant organism–environment analogy rather than a crowd-control result
Emergent engineering and control	SFI’s Emergent Engineering programme, Sowinski, Frank, and Ghoshal (2024) , and Daniels, Krakauer, and Flack (2017)	Frames signals, policies, platforms, algorithms, or social structures as minimal mechanisms acting with adaptive systems; supplies a seizure-inspired oscillator controller and an empirically grounded model of criticality control in macaque conflict; none is a validated human-crowd thermostat
Belief and transition models	Galesic et al. (2021) , Lee, Kuklinski, and Timme (2025) , and Hébert-Dufresne et al. (2025)	Expose weights, noise, topology, integration rules, coupling thresholds, and evolving cascade intensity as candidate state variables or hazards; model parameters are not automatically social actuators
Causal and operational testbeds	Helbing, Johansson, and Al-Abideen (2007) and Amichay, Couzin, and colleagues (2024)	Supply video-based crowd diagnosis and flow control in a safety setting, and open-/closed-loop manipulation of reciprocal animal coupling; these are genuine precedents but remain domain-specific
AI mediation and evaluation	Kehler et al.’s GCI preprint (2025) , MIT CCI’s programme, Vaccaro, Almaatouq, and Malone (2024) , and Burton et al. (2024)	Explore AI orchestration, divergent idea generation, task allocation, homogenization risk, auditing, and explicit performance baselines; they show why an AI actuator must itself be monitored and compared against simpler arrangements

No source in this table supplies the whole thermostat or uses the term in the present theory’s sense. Together, however, they establish a serious neighbouring research programme rather than one Santa Fe analogy. [Analogical Models in Culture Mechanics: A Semantic Inventory](#) gives the detailed source-status table and records the transfer limits.

The compact diagnostic dashboard is:

synchrony S + functional coupling F + task error E

S asks whether participants are in step. A Kuramoto-style order parameter r can serve as a synchrony gauge where a meaningful phase or direction is defined: values near one indicate concentration around a common phase. It is not generally the literal fraction in step; two equally sized, internally synchronized groups in opposite phases can cancel to $r = 0$. F asks how strongly contributions depend upon, constrain, or hand off to one another; the theory assumes no universal scalar for it. E asks, “Are we doing the job well?” A task-specific mean squared error can measure distance from a defined target, but it measures performance, not functional coupling.

[Lorenz and colleagues](#) found that mild social influence in their estimation tasks narrowed diversity without improving collective error and increased confidence without improved accuracy. They did not establish a universal law from high r to high MSE: copying can improve, preserve, or degrade accuracy depending on what is copied and how independent errors were. Alex Pentland’s “[Social Dynamics: Signals and Behavior](#)” supports the importance and real-time measurability of nonlinguistic signals in scoped settings. Its reported r values are ordinary correlation coefficients, not Kuramoto order parameters, and its task-specific findings do not establish that social signals explain 80–90 percent of productivity or creativity in general. Pentland’s experimental wearable feedback meter is best treated as a possible thermostat sensor component, not as the completed system.

For the full random/clockwork/laser mapping, metrics, non-inferences, and relationship to laser and magnetization models, see [Analogical Models in Culture Mechanics: A Semantic Inventory](#).

29. Cultural interoperability and its breakdown (Babelization)

Cultural interoperability is the capacity of differentiated persons, communities, institutions, and symbolic orders to translate important meanings, recognize legitimate common procedures and jurisdictions, and coordinate the common action their shared field requires. It does not require identical first-order beliefs, one homogeneous way of life, high phase synchrony, or fusion into one transparent collective subject.

The [Tower of Babel story in Genesis 11](#) supplies the memorable limit image. **Cultural interoperability breakdown (Babelization)** is the condition in which interoperability falls below the level needed for differentiated groups to remain participants in one functioning cultural or political order. *Babelization* is the analogy label, not a claim that the biblical text states the theory developed here. “Language” includes more than dictionary-level mutual intelligibility. It includes shared or translatable:

- categories and distinctions;
- moral meanings and causal stories;
- historical memory and sacred symbols;
- standards, offices, and authorities;
- procedures of disagreement, appeal, and correction;
- jurisdictional boundaries and common purposes.

A society can continue using the same words while their operative meanings diverge. *Justice, freedom, violence, equality, democracy, truth, and safety* may evoke incompatible worlds, agents, permissions, and remedies.

Lifted solidarity, thickness, span, and the floor The principal culture-mechanical implementation of cultural interoperability is **operative shared lifted mechanical solidarity**: a genuinely binding second-order order that tells differentiated groups how meanings are translated, authorities and jurisdictions are recognized, disputes are decided, errors are corrected, losses are accepted, successors take office, and common action becomes legitimate. Its architecture is defined by a shared answer generator. Cultural interoperability describes one society-wide performance of that architecture. Neither term should replace the other.

Three related quantities make the originating model inspectable:

- **Effective meta-order thickness** T_L is the depth and binding capacity of shared lifted solidarity at the interfaces that matter. It includes usable rules for translation, evidence, jurisdiction, disagreement, correction, loss, succession, and common action. Thickness is not the number of written rules. A compact generator can be thick because it reliably produces binding answers.
- **Lifted-solidarity surface area**, also called **meta-order span**, S_L is the extent of the population, institutions, domains, and intergroup interfaces over which the same meta-order is actually recognized and binding.
- **Effective shared surface** Σ_L is the joint reach of depth and span. As a first-order model, the project writes $\Sigma_L = T_L S_L$.

The originating proportionality hypothesis is:

$$I \approx k \Sigma_L = k T_L S_L,$$

where I is cultural interoperability and k collects context-specific implementation quality. On this hypothesis, lower cultural interoperability is directly proportional to a thinner or smaller shared lifted-solidarity surface; increasing operative thickness or span increases interoperability when the other factor is held fixed.

The linear form is a useful first approximation and hypothesis generator, not an established social law. Bottlenecks, weakest-link interfaces, thresholds, saturation, network topology, unequal power, and closed but effective coordination may produce nonlinear cases. A nominally universal constitution can also have almost no effective surface if groups do not recognize or enact it.

The **cultural-interoperability floor (anti-Babel floor)** is the minimum effective shared surface required for differentiated groups to remain members of one functioning shared order:

$$I \geq I_{AB}.$$

Above the floor, high interoperability can be implemented as **differentiated unity**: one real *we* with different persons, functions, beliefs, and bounded jurisdictions. It does not imply **subjecthood absorption (fusion)**. Below the floor, local PCI slots remain fully occupied and local groups may retain strong first-order solidarity. What is missing is enough operative shared lifted solidarity between them.

Two failure descriptions should be kept distinct:

- **Thin lifted mechanical solidarity** exists where the shared second-order order is too shallow, weakly binding, or incomplete at crucial interfaces to generate usable common answers.
- A **nominal lifted meta-order** is formally or verbally shared but does not operate as a common generator in practice. It may have wide paper span and very little effective surface.

Intergroup semantic decoupling and breakdown **Intergroup semantic decoupling** is the process by which local symbolic orders cease transmitting sufficiently compatible meanings to one another. Common words diverge; trusted translation routes decay; institutions lose cross-group legitimacy; and local classifications cease to survive passage across group boundaries. Local coherence can rise while society-wide interoperability falls.

The characteristic sequence is:

```
operative shared lifted solidarity becomes thinner or loses span
↓
subcultures construct increasingly separate first-order moral worlds
↓
common words, authorities, procedures, and goals decouple
↓
local synchronization and solidarity may rise
↓
society-wide translation, trust, and legitimate coordination decline
↓
cultural interoperability falls below the anti-Babel floor
↓
common projects fail and institutions become intergroup prizes
↓
people retreat into groups they can still trust
↓
local solidarity strengthens while the shared meta-order loses surface
○
```

The result is not mere individualism and need not be social randomness. It is **local synchronization with society-wide semantic decoupling**. Each subculture may possess a strong local bigOther, sacred history, victimology, enemy image, and epistemic authority. The society remains materially interdependent while becoming mythologically clan-like.

Collective-agency failure is a possible downstream result: the population cannot formulate, legitimate, or execute common purposes at the required scope. It is not identical to cultural interoperability breakdown, because collective

agency can fail for other reasons and a society near the floor may still complete some projects. The causal claim is that breakdown removes a necessary interface for projects whose meaning and legitimacy must cross the decoupled groups.

An orchestra supplies a compact analogy. Every quartet may be internally synchronized and technically excellent, yet the orchestra cannot perform if each quartet follows a different score, tempo, and definition of the piece. Making each quartet louder and more internally unified worsens the whole. Society-wide agency similarly requires a shared second-order score—common procedures, sufficiently overlapping or translatable terms, and a recognizable common performance—without requiring every instrument to play the same notes.

Culture mixing as one breakdown mechanism The originating claim is not merely that semantic fragmentation sometimes happens. It is that **culture mixing can contribute to cultural interoperability breakdown (Babelization)** when a previously shared mythology fragments faster than a credible lifted meta-order can integrate the incoming or newly formed parts.

one society-wide mythology or operative meta-order
↓ rapid fragmentation or mixing without integration
many locally complete first-order mythologies
↓
different sacred histories, authorities, victims, enemies,
causal stories, and meanings of common words
↓
local bigOthers may grow stronger
↓
intergroup semantic decoupling reduces effective shared surface
↓
common projects stall and institutions become intergroup prizes
↓
retreat into clan-like groups

This is Tower-of-Babel-style culture destruction. People may still speak the same dictionary language, share streets, use the same infrastructure, and vote in the same elections. Yet they can no longer transmit meaning or formulate goals whose legitimacy survives passage between groups.

The framework therefore does not treat cultural mixing as automatically benign. The outcome depends partly upon the relative rates of two processes:

rate at which incompatible first-order mythologies multiply or decouple
versus
rate at which operative shared lifted solidarity gains thickness and span

When integration wins, diversity can enlarge competence and perspective inside lifted solidarity. When fragmentation wins, mixture can produce local synchronization and global paralysis. The important question is whether the mixed society can still say **“we,”** translate its central words, recognize common authorities and procedures, accept bounded losses, and act toward a common future.

Diversity is not cultural interoperability breakdown (Babelization). First-order diversity is compatible with collective agency when groups retain:

- an operative shared second-order identity and answer generator;
- overlapping or reliably translatable meanings for central terms;
- trusted translation routes and legitimate common institutions;
- procedures through which political losers remain members;
- bounded jurisdictions, superordinate goals, and correction routes;
- sufficient intergroup contact to correct caricature.

The **cultural-interoperability test (Babel test)** for a proposed mythology is therefore:

Does it enlarge the thickness or span of the bridge required for common action, or does it merely make one local cluster more coherent while shrinking the society's effective shared surface?

Reality coupling and adversarial mythology construction

30. Reality-coupled mythology

A **reality-coupled mythology** connects meaning and ritual to practices whose consequences provide continuing feedback.

The Balinese water-temple or **subak** system is an important positive case. [J. Stephen Lansing and James Kremer](#) describe networks in which temples, sacred obligations, farmer associations, irrigation, planting schedules, and pest control formed a complex adaptive system.

The mythology did not merely produce collective sentiment. It helped make adaptive cooperation meaningful, memorable, and enforceable:

The case suggests a strong design principle:

A constructive mythology should attach sacred meaning and social honour to practices whose adaptive value remains exposed to material feedback.

Reality coupling can take several forms:

- ecological consequence;
- prediction and measurement;
- craftsmanship and physical performance;
- voluntary participation and costly exit;
- comparison among institutions;
- reciprocal exchange;
- health and developmental outcomes;
- durable infrastructure;
- correction by people bearing consequences.

Reality coupling can be weak and delayed. Good culture strategies often work like compound interest: one honest exchange, maintained tool, punctual meeting, or fair procedure may show little immediate advantage, while cumulative effects become enormous. This delay gives emotionally dramatic but destructive mythologies an adversarial advantage.

31. Epistemic constitution and correction

Mythology construction changes the very lens through which correction will later be interpreted. It must therefore design its own limits.

A reality-anchored mythology preserves:

- independent evidence routes;
- meaningful disagreement;
- memory of failed predictions and previous meanings;
- provenance and inspectable reasons;
- domain limits on authority;
- honourable correction and mind-changing;
- reversible experiments where possible;
- dignified exit;
- distinction between criticism of a claim and expulsion of a person.

In the framework-specific sense used here, the **epistemic constitution of lifted mechanical solidarity** is the society-wide arrangement that decides whether strangers can disagree, test claims, remember failure, and correct shared belief while remaining members of one civic order. This formulation is proposed here; it is not Durkheim's own

term. Mythology construction can move that constitution toward a reality-anchored, truth-seeking order or toward a systemic-lying order.

Reality-anchored recursion:

```
sincere avowal
↓
visible disagreement
↓
plural inquiry and practical testing
↓
encounter with reality
↓
correction and revised practice
○
```

Self-sealing recursion:

```
mythology authorizes the evidence
↓
contradiction proves hostility or impurity
↓
failure proves insufficient commitment
↓
greater synchronization and punishment
↓
less corrective information
○
```

The apparent “noise reduction” in this loop must be named from an analytical rather than incumbent perspective. **Rival-signal suppression** obstructs a competing mythology’s transmission; **counter-program suppression** attacks its reproduction or institutional embodiment. A counter-narrative can instead carry independent evidence, minority perception, or internal correction. Suppressing it may strengthen short-run coherence while damaging the mythology’s reality interface. *Culture Mechanics*, “Disagreement, mythological rivalry, and ideological-form conflict,” provides the primary conflict taxonomy.

The central epistemic maxim is:

A mythology may organize society’s encounter with reality; it may not receive the right to determine what reality is permitted to be.

An **adversarial linguistic audit** should inspect local operations involving assertion, omission, redefinition, framing, discussion corruption, enemy construction, moral attribution, agenda control, and policy coupling. The label is proposed in this synthesis; its component tests draw on established rhetoric, framing, propaganda analysis, and ordinary critical reasoning. Those operations should be examined in the mythology’s own language as rigorously as in an opponent’s.

Apologetic closure and polemical corrosion Apologetics and polemics each have a reality-coupled and a pathological form:

REALITY-COUPLED APOLOGETICS

preserve the braid → answer the strongest objection → repair error → retain justified trust

SELF-SEALING APOLOGETICS

preserve authority → reinterpret every objection as hostility → hide error → demand greater faith

REALITY-COUPLED POLEMICS

isolate a false binding → show evidence and consequence → preserve sound strands → enable replacement

CORROSIVE POLEMICS

compare reality with an undefined perfection → redescribe every limit as guilt → dissolve trust → evade the

The first pathology makes the installed mythology impossible to correct. The second makes any installed order impossible to justify because every real institution can be condemned for failing to instantiate an imaginary condition without scarcity, conflict, error, trade-off, or unintended consequence.

This is the framework's sharp critical diagnosis of one possible use of critique: **delegitimize a real order by holding it against an unspecified or impossible ideal, break people's faith in the order because it exists under the contingencies of reality, and leave the positive successor obscure until the incumbent has lost authority.** In that mode, cynicism acts like corrosive acid on the braid. It need not disprove each strand; it only has to make fidelity, gratitude, and ordinary confidence appear naïve or culpable.

That diagnosis must not be substituted for the historical self-description of the Frankfurt School. [Max Horkheimer's 1937 "Traditional and Critical Theory"](#) presents Critical Theory as an attempt to bring the social totality toward a rational form while remaining connected to empirical disciplines. The corrosive pattern described here is a **failure mode and polemical interpretation**, not a neutral dictionary definition of all Critical Theory. [Helen Pluckrose and James A. Lindsay's *Cynical Theories*](#) is relevant prior art for examining how the authors understand postmodern and activist theories to threaten science, reason, liberal ethics, and open debate. The **corrosive-acid metaphor** and its place in the one-slot replacement model are proposed here rather than attributed to them as a quotation.

A disciplined audit therefore asks both sides symmetrical questions:

- What exactly does the apologetic defence preserve, and what evidence would make it concede or repair a strand?
- What exactly does the polemic disprove: a factual claim, a causal binding, an authority claim, or merely the fact that the institution is imperfect?
- Does the critic specify the constraints under which any successor must operate?
- Which goods and sound strands will survive the unbraiding?
- Who bears responsibility for the vacancy, transition costs, and successor permissions created by the critique?

32. Downhill honey traps and dark artists

A destructive mythology constructor has an asymmetrical advantage. Immediate psychic rewards are easier to demonstrate than the slow returns of sublimation.

DOWNHILL MYTHOLOGY

resonance

↓

instant certainty, innocence, belonging, status, blame, or catharsis

↓

renewed demand and repetition

↓

dependency, dissipated energy, and reduced capability

UPHILL MYTHOLOGY

resonance

↓

chosen challenge and meaningful role

↓

practice, sublimation, and reality feedback

↓

competence, contribution, and accumulated social capital

A **downhill honey trap** is a mythology that uses an attractive immediate reward to draw recipients into a self-reinforcing path whose longer consequences reduce agency, maturation, or flourishing.

Its characteristic offers include:

- moral importance without earned capability;
- absolution from responsibility;
- an enemy who explains every failure;
- endless demands presented as final completion;
- aggression laundered as protection or justice;
- belonging conditional upon repeated outrage;
- interpassive action and symbolic consumption;

- liberation defined as release from formative restraint;
- immunity from correction through self-sealing causal stories.

Suicidal empathy and the egalitarian-guardian failure mode [Gad Saad](#) uses **suicidal empathy** for a care response that continues even when it works against the survival interests of the person or society extending it.

His provocative example is a reported street interview with a queer woman supporting “Free Palestine.” Asked whether she understood that people in the society she supported might kill her for her queer identity, she answered yes and maintained her support because they were still human beings deserving care.

The example isolates the directed logic proposed for the egalitarian guardian:

```

group classified as weak, vulnerable, or oppressed
      ↓
care and anti-dominance machinery activates
      ↓
hostility from the protected group is discounted
      ↓
reciprocity and self-protection lose moral priority
      ↓
continued solidarity becomes proof of moral purity

```

The key question is whether this is genuinely universal empathy. Would the same unconditional sentence be extended to people classified not as oppressed but as dominant, reactionary, or fascistic—for example, conservative Christian opponents of abortion? If care follows the oppressed classification rather than humanity as such, the mechanism is not simple universalism. It is a directed guardian programme whose if-then condition can override reciprocity.

The example does not establish that all queer support for Palestinian civilians has this structure. A person may oppose collective punishment, distinguish civilians from governments, or accept risk as a universal moral commitment. The anecdote belongs here because the reported answer displays the limiting case with unusual clarity: the guardian role treats withdrawal of care in response to mortal hostility as a betrayal of identity.

The hairworm and wood-cricket analogy Saad compares suicidal empathy to a wood cricket infected by a hairworm. The biological substrate of the analogy is real: experiments report that crickets infected by the nematomorph *Paragordius tricuspidatus* are more likely than uninfected crickets to enter water, where the aquatic adult worm can continue its life cycle. The exact sensory mechanism is more complicated than a parasite simply “telling” the cricket where water is. [Frédéric Thomas and colleagues](#) found altered behaviour leading infected insects toward the fatal transition.

Saad’s cultural analogy is:

```

foreign programme enters the host
      ↓
normal aversion and survival priorities are redirected
      ↓
the host performs conduct harmful to itself
      ↓
the programme completes its own reproductive cycle

```

Applied to mythology construction, the “parasite” is not a disliked population and the recipient is not literally an insect. The candidate parasite is a self-replicating mythological programme that captures care, status, guilt, or anti-dominance and uses the recipient’s own moral machinery to suppress self-preservation and correction.

The analogy earns its place because it distinguishes two success functions:

```

success of the host
≠
success of the programme reproducing through the host

```

A mythology may spread precisely because it induces costly signalling, self-sacrifice, and immunity to disconfirming consequences. Calling the pattern parasitic is a strong causal claim. It becomes warranted only when the mythology predictably damages carriers while securing its own transmission, and when rival explanations such as deliberate sacrifice for a coherent universal principle fit the evidence less well.

A **dark artist**, in the strict use proposed here, is not merely a person who expresses an erroneous or harmful opinion. The term applies to an actor who knowingly and strategically uses deceptive, agency-corroding, or correction-disabling techniques to capture recipients and obtain power, status, money, protection, or destructive effect.

That definition requires evidence of conduct, method, knowledge, incentive, and causal contribution. It must not become a floating label applied to ideological opponents.

33. Apologetic, polemical, and defensive mythology construction

Defence requires more than correcting isolated claims. A destructive actor can change the claim while retaining the same psychological and rhetorical mechanism.

Covert trusted-opinion-leader capture and trusted-channel rebraiding The originating defensive threat model can be stated plainly:

An attacker can try to capture, cultivate, or select a rival field's trusted opinion leaders and other internal guardians, then use their retained internal authority to unbraid the incumbent mythology and rebraid one attacker-favoured successor.

The present framework calls the human-carrier form of this application-level pattern **trusted-opinion-leader capture followed by trusted-channel rebraiding**. It is a proposed Culture Mechanics synthesis, not an established term and not a claim that religious, political, medical, or institutional change normally has this cause. An analogous attack can target an office, institution, appointment system, or communication channel; these are authority structures and authenticated channels, not trusted opinion leaders. The sharpest form is **sentinel inversion**: a person, office, or institution recognized as a guardian of the field becomes the authenticated delivery channel for material that weakens or replaces its load-bearing classifications.

Epistemic Agency under Mechanical Solidarity, "Trusted opinion leaders, cascades, and cultivated authority," explains why the target is not merely the person with the largest audience. A high-value trusted opinion leader may combine expertise, personal trust, pastoral care, gatekeeping, translation, brokerage, institutional representation, appointment power, and access to common attention. The attack targets that composite trust and interpretation architecture.

One hypothetical religious scenario makes the causal sequence inspectable without asserting that any real doctrinal change instantiates it:

```
map trusted opinion leaders and the interpretive, pastoral, educational,
publishing, and appointive structures that sustain their authority
↓
gain durable influence over selected persons, offices, or succession processes
through concealed dependency, aligned incentives, relational capture,
coercive leverage, selective cultivation, or preferential appointment
↓
preserve the carrier's classification as an internal guardian
↓
translate rival classifications into authorized incumbent language
↓
retain sacred words and symbols while changing their load-bearing bindings
↓
use sermons, teaching, conferences, publications, and common reception
to turn vertical authority into visible horizontal acceptance
↓
cascade through seminaries, offices, regional leaders, local clergy,
small-group leaders, and ordinary peers
↓
embed the successor interpretation in curricula, appointments, funding,
ritual, discipline, publishing, and institutional memory
↓
reclassify the incumbent interpretation as alien, harmful, or disloyal
and the successor as faithful, compassionate, mature, or orthodox
```

↓

later participants inherit the rebraided order as normal and internally generated

No single acquisition mechanism is essential. Explicit bribery or criminal coercion would be the clearest corruption, but sincere adoption can be more credible and durable. External elite networks can become a leader's main reference group; funding and prestige can alter dependency without purchasing a sentence; institutions can select already aligned candidates; and repeated sponsorship or platform access can cultivate people whose authority later appears organic. The attack can therefore be partly deliberate at the source and sincerely enacted at downstream levels. Distributed implementation does not erase upstream strategy, and upstream strategy does not prove that every carrier knowingly participates.

The pattern can work for six linked reasons:

1. **Authenticated ingress.** An external attack is readily classified as hostile and can strengthen incumbent solidarity. The same proposal carried by a trusted pastor, theologian, editor, expert, or institution arrives as internal interpretation and initially inherits its authorization.
2. **Composite authority and spillover.** Expertise, office, care, character, and group representation can reinforce one another. Legitimate pastoral or coordination authority may spill into unearned epistemic authority over the disputed claim.
3. **Compatibility as a bridge.** Terms such as *truth, justice, love, compassion, unity, mission, or protection* need not be abandoned. Their mappings to causes, duties, authorities, and permitted conduct can be altered incrementally, making an incompatible destination look like a faithful application during the unbraiding interval.
4. **Common reception and field back-action.** Public address lets participants observe—or imagine—that respected peers received the same interpretation. Silence, repetition, visible adoption, and sanctions can then convert vertical endorsement into apparent horizontal consensus, which acts back upon local judgment.
5. **Nested translation and obscured provenance.** Each internal handoff adapts the message to a smaller jurisdiction. Several apparently independent authorities may derive from one source, while the originating objective, funding, evidence selection, or wording becomes less visible at each stage.
6. **Institutional memory and succession.** Appointments, education, publishing, ritual, and disciplinary rules outlast the initiating people. Once these select and train the next generation of interpreters, the successor can reproduce without continuing direct control from the original attacker.

Under the single-slot principle, this is not the installation of a rival bigOther beside an intact incumbent. If the incoming programme is compatible, it may be integrated or may repair the incumbent without replacement. If it contradicts load-bearing classifications, success requires sufficient loosening and unbraiding for one successor weave to be rebraided. Retained names, offices, scriptures, symbols, memories, and practices receive their operative meaning from that successor. Transitional inconsistency indicates an unstable or tangled lens, not parallel governing evaluators.

The mechanism is truth-neutral, but covertness is not. An internally transmitted correction may be true and emancipatory; a rival successor may be more reality-coupled than the incumbent. The pattern becomes a pathological covert attack when material provenance, dependency, coordination, or sponsor control is deliberately hidden; when coercion or deception substitutes for judgment; or when the successor monopolizes interpretation and disables correction. Rivalry and replacement alone do not establish wrongdoing.

Evidence of doctrinal or policy change is therefore weak evidence of attack, and a payment, grant, friendship, shared vocabulary, or elite association is not proof of capture. A strong inference would require converging evidence such as documented external objectives, concealed material relationships, private coordination, control over evidence or wording, patterned cultivation and appointment, common source dependence behind apparently separate voices, coordinated timing, suppression of provenance, retaliation against correction, and durable institutional effects. The comparison set must include sincere conversion, theological or intellectual development, common response to new evidence, generational replacement, class and career incentives, missionary adaptation, ordinary factional conflict, and independent convergence.

Defence follows from the same mechanism: profile authority by function and jurisdiction; disclose material relationships and participation in message construction; trace sources and transformations; test whether plural voices are causally independent; separate pastoral, coordinative, normative, and epistemic authority; keep appointment and succession processes inspectable; protect internal dissent and external evidence routes; and make corrections travel through the same cascade as the original claim. See “Safeguards for persons, institutions, and cultures” in [Epistemic Agency under Mechanical Solidarity](#), “Memory, provenance, and correction” in [Epistemic Constitution of Lifted Mechanical Solidarity](#), and “LT-037 — Context and source manipulation” in [Linguistic Tricks: A Semantic](#)

Inventory.

For further case investigation, [Megan Basham's *Shepherds for Sale: How Evangelical Leaders Traded the Truth for a Leftist Agenda*](#) and [Taylor R. Marshall's *Infiltration: The Plot to Destroy the Church from Within*](#) offer polemical book-length infiltration narratives. They are candidate case claims, not evidence for this threat model. [J. D. Greear's "An Open Response to Megan Basham's *Shepherds for Sale*"](#) illustrates why accused participants' counteraccounts and primary records must be tested before ordinary disagreement is redescribed as covert capture.

Mythological apologetics and polemics Mythological apologetics maintains a constructive mythology under pressure. Mythological polemics contests the braid through which a destructive or failed rival retains authority. Neither operation is reducible to fact-checking because the contested object includes causal stories, moral classifications, identities, status relations, institutions, and permissions.

Constructive apologetics should:

- state the mythology's load-bearing claims plainly;
- show how symbols connect to real practices and goods;
- answer strong objections rather than ceremonial weak ones;
- admit and repair a false strand without treating the whole identity as lost;
- preserve records of failure and correction;
- demonstrate the mythology through functioning institutions and exemplary conduct.

Constructive polemics should:

- map the rival braid before attacking it;
- identify which strands are factual, causal, moral, identitarian, or institutional;
- distinguish an honoured value from the mechanism claiming to realize it;
- compare the mythology's semantic promise with its operational permission;
- expose contradictions, cost shifting, self-sealing explanations, and impossible counterfactual standards;
- withdraw undeserved authority without indiscriminately humiliating recipients;
- preserve sound strands that can be reattached to the successor mythology;
- present a credible replacement before corrosion becomes generalized cynicism.

The replacement sequence can therefore require attack before adoption:

```
incumbent mythology classifies the successor as impossible or evil
      ↓
polemics loosens the incumbent's load-bearing bindings
      ↓
recipients regain permission to perceive and evaluate alternatives
      ↓
the successor mythology supplies a resonant identity, role, and institution
      ↓
apologetics maintains the new braid without sealing it against reality
```

Polemics is not a licence to lie, dehumanize, or manufacture guilt. Its legitimate object is a demonstrable claim, binding, authority relation, practice, or consequence. Apologetics is not a licence to immunize authority from correction. The two operations become constructive only when they remain answerable to evidence and to the human and institutional consequences of replacement.

33.1 Immunization before capture **Psychological inoculation** originates in [William McGuire's research on resistance to persuasion](#): limited exposure to weakened counterarguments, together with refutation, can stimulate resistance to later persuasion. **Technique-based inoculation** is a more recent extension that teaches people to recognize recurring manipulation before encountering its full-strength form.

[Jon Roozenbeek](#), [Sander van der Linden](#), [Beth Goldberg](#), [Steve Rathje](#), and [Stephan Lewandowsky](#) tested brief inoculation videos addressing emotional manipulation, incoherence, false dichotomies, scapegoating, and ad hominem attacks. Across preregistered experiments and a YouTube field study, the interventions improved manipulation-technique recognition and information discernment.

The proposed mythology-level extension is to teach the downhill signature:

- instant moral elevation;
- impossible or renewable demand;

- compressed enemy;
- cathartic repetition;
- moral permission without reciprocal responsibility;
- explanation of every failure through the mythology itself;
- substitution of symbolic action for capability.

The recipient should learn to ask not only “Is this fact false?” but:

“What reward is this story offering me, what repetition does it recruit, and what will I be less able to do after living inside it?”

33.2 Construct a superior attractor Debunking removes an explanation but may leave untouched the needs it satisfied. A constructive counter-mythology must offer belonging, dignity, agency, significance, protection, and status while attaching them to generative roles.

same available energy

- └ downhill route: accuse, display, demand, repeat
- └ uphill route: learn, build, protect, maintain, repair

The superior attractor should provide:

- attainable first challenges;
- visible growth in competence;
- a community that honours contribution;
- meaningful rationale;
- genuine choice and responsibility;
- exemplars who perform the difficult work;
- rituals marking mastery, service, repair, and truthful correction;
- a future larger than the immediate conflict.

The decisive principle is:

Do not ask people merely to renounce the downhill reward. Offer a resonant and socially supported path by which the same drive can become competence, contribution, and justified pride.

33.3 Recovery and dignified exit Leaving a captured mythology can require surrendering friends, status, certainty, identity, and the belief that previous sacrifices were justified. Humiliation raises the exit cost.

Recovery therefore needs:

- relationships outside the captured network;
- permission to admit doubt incrementally;
- restitution and repair roles;
- recognition for truthful reversal;
- practical routes into work, skill, and community;
- distinction between architects, knowing distributors, imitators, and ordinary recipients;
- protection from endless inherited guilt.

The addiction analogy is useful for understanding reinforcement and relapse, but it must not erase agency or imply that every recipient is permanently lost. Recovery may be difficult, partial, or rare; constructive theory must nevertheless preserve the route.

33.4 Containment and deterrence Testimony without enforcement may warn one audience while the perpetrator moves to another. Deterrence requires real, predictable costs:

detection

↓

evidence and attribution

↓

fair adjudication

↓

proportionate sanction and restitution

↓

public precedent

Depending upon demonstrated conduct and jurisdiction, costs may include:

- correction and right of reply;
- loss of a position of trust;
- professional discipline;
- contractual funding consequences;
- restitution and disgorgement of gains;
- civil or criminal liability for actionable fraud, coercion, threats, or violence;
- exclusion from roles whose duties were knowingly violated.

The intended deterrent expectation is:

“If I knowingly exploit these techniques, the evidence will follow me and the probable costs will exceed the gain.”

It is not fear of indiscriminate harassment, collective punishment, or violence.

34. Destructive culture, causal attribution, and accountability

A **destructive culture**, in the literal functional sense, is a shared order whose classifications and permissions repeatedly convert human energy into the destruction of persons, property, trust, capability, institutions, or inherited social capital.

Visible outputs may include ritualized violence, vandalism, predation, institutional decay, chronic dishonesty, abandonment of maintenance, or celebration of conduct that makes the participants’ own environment less habitable.

These outcomes are diagnostic alarms. They are not completed causal attribution.

VISIBLE DESTRUCTION

↓

identify the legitimating mythology

↓

reconstruct its Perception-Context-Permission sequence

↓

trace transmission, incentives, and institutional reinforcement

↓

identify knowing actors and demonstrable conduct

↓

test rival causal explanations

↓

adjudicate responsibility and impose proportionate costs

Different destructive events may arise from different mechanisms even when their surface form resembles one another. Riot, criminal predation, political violence, celebratory disorder, crowd contagion, and institutionalized corruption should not be collapsed into one causal story without evidence.

The originating example points specifically to regularly burning cars in suburbs of Paris and to street violence after football matches. These are visible products of destructive culture in the literal sense: human energy, shared permission, and collective excitement are being converted into damaged persons, property, trust, and habitat. Their concreteness matters. A theory that cannot name such outputs risks turning destruction into an abstraction.

The outputs are nevertheless not self-explanatory. A burned car after a football match and a burned car during unrest in a Parisian suburb present a similar visible loss, but the first may arise from celebratory transgression, crowd contagion, status display, or opportunism; the second may be organized through grievance, territorial identity, resistance, predation, or some combination. The material symptom can be seen “by eye,” while the mythology, incentives, knowing contributors, and appropriate remedy must still be reconstructed separately. Similar smoke does not prove an identical fire.

The working maxim is:

Social destruction is the smoke alarm. Mythological analysis locates the fire. Causal attribution identifies who knowingly supplied the fuel.

Anger at betrayal can become useful energy when it is sublimated into investigation, documentation, collective claims, restitution, protection, and persistent enforcement. Anger is fuel; due process supplies steering and brakes. Without institutional form, retaliatory anger can reproduce the same enemy fixation, catharsis, and downhill repetition it opposes.

The accountability boundary is therefore strict:

Sanctions attach to demonstrable conduct and causal responsibility, not merely to possession or expression of a disliked mythology.

From theory to the Mythology Construction Toolkit

35. Construction workflow

The authority boundary precedes the workflow: *Systems Leadership* remains the definitive source for implementing a culture as a whole, including the necessary coordination of mythology with systems, symbols, habits, leadership behaviour, and repeated experience. This workflow addresses the mythology layer and must not be treated as a replacement for the book's complete method.

Within that boundary, the **Mythology Construction Toolkit** organizes the provisional analytical operations developed so far for studying endogenous formation and the initial design questions of the prospective purposive branch. Its large workflow is intentional: population and ecology, resonance, braid replacement, epistemic safeguards, reality coupling, and adversarial defence require extended treatment beyond the book's workplace focus. It is not a completed protocol for on-purpose design, release into the wild, and post-release adaptation; that extension remains future work. Nor is it a recipe for maximizing compliance or a promise that the intended destination can be culturally manufactured. Every present stage includes a reality, agency, and consequence check.

Stage 1: Define the real coordination problem State the condition that requires cultural cooperation.

- What cannot be solved by isolated individual action?
- Across which population must coordination occur?
- What is the evidenced baseline trajectory if no new intervention succeeds?
- Which material, institutional, developmental, or epistemic outcome matters?
- Who bears the costs of action, error, and inaction?
- What would count as improvement?

The initial problem statement should remain revisable. Otherwise the mythology can become an elaborate solution to a strategically misclassified condition.

Stage 2: Declare normative and constitutional boundaries Before optimizing resonance, specify constraints:

- factual claims remain corrigible;
- persons retain dignity and meaningful exit;
- responsibility remains evidence-sensitive;
- permissions remain compatible with law and due process;
- a lifted answer generator may govern universally while keeping its persons, offices, institutions, and first-order outputs within allocated jurisdictions;
- reframing may not conceal contradictory promises;
- no authority receives final control over reality;
- constructive ends do not license arbitrary means.

These boundaries are part of the design, not decorations added after success.

Stage 3: Diagnose the society and its existing mythology Map:

- moral intuitions and motives;
- expressed dispositions;
- causal worldviews;
- identities and historical memories;

- trusted and distrusted authorities;
- institutions, rituals, rewards, and sanctions;
- network bridges and isolated clusters;
- current downhill attractors;
- existing sublimations and capabilities;
- material feedback channels.

Distinguish inherited programming from the current endogenous trajectory:

- Which structural or practical changes precede the proposed new articulation?
- Is there a receiver–order mismatch, and among which receivers?
- Which competing articulations are already being selected without the constructor?
- What is likely to grow, decay, or be displaced if no new intervention succeeds?

Then map the incumbent mythology as a braid:

- Which stories, identities, symbols, rituals, and institutions cross-bind one another?
- Which strands are load-bearing, and which are ornamental?
- Which apologetic responses repair the braid under challenge?
- Which polemical classifications pre-emptively discredit alternatives?
- Which strands preserve real knowledge or social goods and should survive any replacement?

Map its apologetic and polemical actor structure:

- Which persons, offices, and institutions currently occupy the relevant slots?
- Which actors possess merely a voice, and which possess recognized authority?
- By what combination of disposition, lineage, credential, appointment, reputation, ritual, or procedure were they selected?
- Which recognition community ratifies or rejects them?
- Does authority belong to the person, the office, the institution, or an unstable mixture?
- What happens at succession, schism, institutional failure, or loss of credibility?

The principal outputs are a **population-and-ecology map**, an **endogenous baseline-trajectory map**, an **incumbent-braid map**, and an **actor-slot map**, not a single demographic persona.

Stage 4: Specify the constructive destination State the proposed destination (D^*), who chose it, whose life it concerns, and which authority makes the intervention legitimate. Then describe what the mythology should make more possible over time:

- which capabilities should grow;
- which relationships should become more trustworthy;
- which institutions should become more adaptive;
- which practices should be maintained;
- which drives require sublimation;
- which coordination should widen;
- what successors should inherit.

Also state unacceptable paths, protected jurisdictions, foreseeable trade-offs, and observations that would show that the project is moving away from (D^*). This is the **life-drive and reality-coupling specification**, not an assertion that the destination will be achieved.

Stage 5: Map resonance and construct a mythology family For each relevant subgroup, ask:

- What moral language makes the destination intelligible?
- Which identity can own the role without self-betrayal?
- Which costs will be experienced as honourable rather than imposed humiliation?
- Which trusted exemplars can embody it?
- Which shared second-order symbols can join the variants?

The output is a family of morally intelligible but operationally compatible variants.

Stage 6: Build the construction grammar Specify:

- world model and historical memory;

- desired and feared futures;
- topoi and plot;
- causal stories;
- protagonists, beneficiaries, obstacles, and responsible actors;
- sacred values and master signifiers;
- identity and role offers;
- Perception–Context–Permission sequence;
- the anticipated recipient knowledge, codebook, lens, and context on which the message's compression depends;
- concrete practices and expected consequences;
- rival causal stories and distinguishing evidence.

Cross-bind each important claim to more than one embodied support where possible: remembered example, moral intuition, role, ritual, institution, and observable consequence. Redundancy should preserve meaning under ordinary strain without protecting falsehood from correction.

The outputs are a **mythology grammar** and a **successor-braid map**, not merely a slogan list.

Stage 7: Design the psychological gradient Inventory the raw motives and rewards already available. Then ask how each can be routed.

Available energy	Downhill capture risk	Constructive route
Anger	Scapegoating and catharsis	Investigation, protection, disciplined enforcement
Status desire	Performative moral superiority	Mastery, service, earned honour
Care	Dependency and boundaryless rescue	Competent help, restoration, reciprocal capacity
Anti-dominance	Enemy fixation and indiscriminate destruction	Due process, distributed power, protection from actual coercion
Loyalty	Suppression of truth for the group	Faithful correction and long-term stewardship
Autonomy	Rejection of every limit	Self-command, responsibility, and protected personal domain
Desire for order	Rigid authority and closure	Reliable procedure, planning, and maintainable institutions
Desire for meaning	Impossible final demand	Vocation, generativity, and work extending beyond the self

Create small attainable challenges, visible feedback, apprenticeship, and recognition for contribution. The aim is to make entry possible without disguising the upward gradient.

Stage 8: Embody the mythology Translate the grammar into:

- exemplars;
- rituals and calendars;
- education and apprenticeship;
- institutional roles;
- selection and promotion;
- recognition and sanction;
- material infrastructure;
- records and memory;
- ordinary etiquette and repeated practice.

Allocate apologetic and polemical agency explicitly:

- Which functions require a trusted person, and which require a persistent institution?
- How are candidates drawn toward, trained for, and admitted to each slot?
- What kind of recognition makes their speech authoritative?
- How does the office survive succession without becoming detached from its purpose?

- Who may challenge, correct, remove, or replace a failed actor?

Every symbolic claim should have an operational counterpart. If the mythology honours stewardship, someone must maintain something real. If it honours truth, correction must receive visible protection.

Stage 9: Activate, transmit, and prototype Use limited and reversible trials where possible. Observe how recipients retell the mythology, which parts they omit, which antagonists they invent, and which actions they infer.

Participatory testing asks recipients to explain:

- what happened in the story;
- what caused it;
- which structures the story makes relevant and what it says will support or damage them;
- which actors, causes, alternatives, uncertainties, and affected structures they reconstructed although the surface message did not state them explicitly;
- who “we” are;
- what someone like them should do;
- what power they now think should be granted, to whom, within which jurisdiction, for how long, and subject to which correction or revocation;
- what evidence could change the interpretation;
- what costs and rewards they expect.

This is the mythology-construction form of the **decompression audit**. The mythology actually received is more important than the mythology the constructor intended. Compare it with both the declared destination and the diagnosed endogenous baseline. Record recipient reinterpretation, institutional filtering, rival intervention, and unintended effects rather than assigning every deviation to failed messaging.

Stage 10: Measure, correct, defend, and retire Track psychological, behavioural, institutional, material, and intergenerational effects. Preserve dissent, failed predictions, reinterpretations, and adverse outcomes.

Measure whether the intervention has moved the trajectory toward the declared destination, displaced the destination, or primarily increased the mythology’s own replication. Do not treat reach, retention, or institutional survival as proxy measures for carrier flourishing.

Run adversarial tests:

- hostile reframing;
- symbol displacement;
- polemical strand isolation and attempted unbraiding;
- corrosion of confidence through comparison with an undefined ideal;
- delegitimation without a declared replacement;
- capture of an apologetic or polemical slot by a self-appointed claimant;
- conversion of institutional authority into personal charismatic rule;
- use of institutional voice to defend organizational survival against institutional purpose;
- accusation in a mirror;
- persuasive redefinition;
- qualified-concept inversion: compare semantic wrapper with operational payload;
- enemy compression;
- self-sealing failure explanations;
- capture by opportunistic institutions;
- drift from role performance into identity display;
- intergroup semantic decoupling and cultural interoperability breakdown (Babelization).

Test its actors as rigorously as their arguments: why does this person or institution occupy the slot, who recognizes that authority, which dispositions and incentives does the selection process favour, and can the actor be corrected or replaced? Test its apologetics as rigorously as the attack: can defenders answer the strongest objection, admit error, and repair a strand without treating disagreement as betrayal? If replacement is intended, specify the unbraiding sequence, the strands to preserve, the bridge across the liminal interval, and the institutions that can carry the successor before the incumbent loses all authority.

A mythology must be revised when its means no longer produce its stated ends. It must be retired when correction cannot restore reality coupling without preserving a destructive attractor. Retirement should be treated as guided unbraiding and rebraiding, not abandonment into a semantic vacuum.

36. Evaluation criteria

Engagement, recall, and agreement are insufficient measures. Evaluation should span the complete causal chain.

Evaluation level	Example questions
Reception	Was the mythology understood, remembered, and experienced as recognition rather than alien imposition?
Recipient reconstruction	What factual, causal, moral, and authorization model did recipients actually reconstruct; which omissions, cues, and assumed codebook produced it?
Relevant-structure appraisal	Which structures did recipients experience as morally important; what support or damage did they infer; and did actual effects match that representation across time, persons, and dimensions?
Internalization	Can participants state reasons, modify the account, and act without constant surveillance?
Psychological gradient	Which immediate rewards and avoidance patterns sustain participation?
Drive direction	Do repeated actions build capability, relationship, creation, maintenance, and posterity?
Sublimation architecture	Which drives are transformed into which capacities; which mythologies, practices, systems, and institutions recurrently perform and transmit that work?
Generative centrality	Which downstream relationships and institutions depend upon those capacities, how replaceable is the architecture, and does felt relevance track the dependency?
Symbolic activation and reprogramming	Which carriers activate which installed classifications; is an observed change temporary activation, repeated reinforcement, or durable lens reprogramming?
Role enactment	Are participants doing the reality-facing work or mainly displaying identity?
Institutional embodiment	Do rules, rewards, appointments, rituals, and budgets tell the same story?
Coordination	Can differentiated actors contribute without forced uniformity?
Coupling range	Does cooperation cross the groups required for the task?
Epistemic integrity	Can evidence, dissent, and failure revise the mythology?
Material consequence	What happens to health, safety, production, trust, ecology, infrastructure, and prosperity?
Trajectory and destination	How does the observed path differ from the diagnosed baseline and the declared (D^*); which receivers, institutions, rivals, and consequences account for the difference?
Exit and recovery	Can a participant leave, change mind, repair harm, and retain ordinary dignity?
Braid integrity	Do its mutually supporting strands create durability without concealing contradiction or error?
Apologetic corrigibility	Can it defend its goods, answer strong objections, and repair false strands?
Polemical precision	Can it contest a failed rival without dissolving sound knowledge, ordinary trust, or the possibility of replacement?
Actor–slot fit	Do the dispositions, competence, credibility, and incentives of the selected actors fit the function they perform?
Authorization integrity	Is authority genuinely recognized through the relevant solidarity order, or merely asserted, captured, or simulated?

Evaluation level	Example questions
Authorization payload	What power, jurisdiction, duration, discretion, oversight, revocability, termination rule, and epistemic spillover follow from accepting the mythology?
Institutional continuity	Can the function survive succession while remaining corrigible and faithful to its purpose?
Adversarial resilience	Can the mythology resist dark arts without adopting them?
Intergenerational consequence	What dispositions, institutions, debts, skills, and environments are handed forward?

Several metrics require long horizons. A mythology can generate immediate unity by consuming trust, savings, infrastructure, fertility, reputation, or institutional independence accumulated by previous generations. Short-term mobilization should therefore be evaluated alongside changes in inherited capital.

A practical scorecard should preserve separate measures rather than collapse them into one number. High resonance cannot compensate automatically for destructive consequence; high material output cannot compensate automatically for systemic lying or coercive capture.

37. Testable hypotheses and research programme

The framework is intended to generate falsifiable research rather than explain every outcome after the fact.

Hypothesis	Prediction	Possible test
Universal activation	Some mythological structures activate species-typical mechanisms across populations.	Cross-cultural experiments using common narrative and moral stimuli.
Dispositional modulation	Different dispositional configurations respond differently to the same mythology.	Pre-measured traits interacted with randomized narrative exposure.
Resonance interaction	Matched mythology produces greater transportation, retention, identification, and enactment than unmatched mythology.	Preregistered factorial experiments comparing matched and mismatched frames and roles.
Relevant-structure resonance	Independently measured relevance interacts with represented support or damage to predict moral appraisal, mythology adoption, and action readiness.	Measure relevance before exposure; randomize credible causal accounts of a mythology's effects on the same structures; compare appraisal and adoption while measuring actual-effect beliefs separately.
Change-indexed moral mobilization	A condition represented as active continuation, prevented transition, or culpable omission produces more intense moral appraisal and action readiness than the same material condition represented statically.	Randomize static, active-continuation, prevented-alternative, and omission descriptions while holding facts constant; test interaction with independently measured relevance.
Mirrored relevance	Identification with a represented person makes that person's relationships, injuries, responsibilities, or future more morally relevant to the recipient.	Randomize perspective and identification cues; measure immediate appraisal, sacrifice choices, resource allocation, and generalization beyond the story.
Foregrounded relevance	Selective presentation of affected structures changes present salience and moral appraisal without necessarily changing durable relevance rankings.	Compare one-shot salience with delayed rankings and behaviour; repeat exposure to distinguish activation from reprogramming.

Hypothesis	Prediction	Possible test
Audience-modelled reconstruction	The same compressed message produces different factual, causal, moral, and authorization models in audiences with different installed codebooks, and a message designed for one audience more reliably produces the model anticipated for it.	Elicit full recipient reconstructions after crossed message-by-audience exposure; compare literal content, predicted model, actual model, and expanded controls.
Sublimation-carrier activation	A culturally familiar carrier activates a richer and more conduct-directing complex of sublimation-related classifications in recipients whose lenses contain the associated programming than in mismatched recipients.	Cross carriers and audiences; measure reconstructed meanings, sentiment classifications, action readiness, costly practice, and persistence while distinguishing familiarity from agreement.
Counter-mythological reprogramming	Repeated rival reclassification combined with supporting rewards, sanctions, systems, and exemplars changes appraisal and practice beyond the temporary salience produced by one exposure.	Compare one-shot activation with longitudinal, institutionally reinforced exposure; measure durable lens mappings, Beseelung, conduct, transmission, and recovery after the signal is removed.
Generative-centrality/relevance mismatch	Sublimation architectures upon which many downstream capabilities depend are more vulnerable to under-maintenance when their generative centrality is high but their felt relevance is low or negative.	Measure relevance independently from capability production and dependency; compare investment, transmission, replacement availability, inherited-capital consumption, and delayed institutional outcomes across cases.
Protector-framing authorization	Threatened-structure and protector framing increases willingness to delegate power beyond any increase in agreement with the underlying proposal.	Hold policy content constant; vary threat, culprit, and protector roles; measure agreement separately from discretion, duration, oversight, opponent restriction, and jurisdictional spillover.
Cognitive-relief pathway	Under complexity, uncertainty, public exposure, or responsibility, an authority-endorsed compressed formula gains an adoption advantage partly through subjective relief and reduced checking.	Vary load, time pressure, publicity, authority endorsement, and cost of a check; test relief as mediator and willingness to inspect qualifications as an outcome.
Age amplification	Receptivity differences associated with dispositions increase as people select congruent niches.	Longitudinal studies of traits, environments, mythology exposure, and response.
Polygenic prediction	Future polygenic scores predict some differential mythology receptivity.	Prospective genomic studies with out-of-sample prediction and strict population controls.
Incremental prediction	Polygenic scores add prediction beyond demographics and self-report.	Nested models evaluated on held-out samples.
Cultural-niche reinforcement	Adoption leads people to select relationships and institutions that reinforce the mythology.	Longitudinal network and migration studies after conversion or identity change.
Cultural-meta-environment	Distributed mythological and institutional environments create systematic non-genetic formation not captured by the shared household.	Designs separating household, peer-network, institutional, media, regional, and cohort exposure while modelling genetic similarity.

Hypothesis	Prediction	Possible test
Gene–culture feedback	Durable mythologies alter status, partner choice, fertility, migration, or survival in ways that change selection pressures.	Historical-demographic and genomic analysis with rival causal models.
Fast evolution	Persistent cultural selection pressures produce detectable dispositional change over historical time.	Ancient and modern genomic comparisons linked to documented changes in marriage, status, fertility, migration, or survival.
Population-history	Historical gene–culture trajectories predict different response distributions across societies.	Multi-population replications with measurement-invariance and ancestry-sensitive designs.
Producer–guardian	Producer-like and guardian-like configurations form partially stable, possibly heritable clusters with different mythology preferences.	Latent-profile, twin, genomic, and experimental-receptivity studies.
Marriage-mediated coupling range	Weaker intensive kinship predicts wider non-kin trust and greater resonance of impersonal civic mythology.	Kinship-network, institutional, historical, and cross-cultural studies.
Lifted-solidarity compatibility	Democracy is more durable where political loss remains compatible with shared membership and impersonal law.	Comparative institutional studies measuring civic meta-solidarity rather than formal rules alone.
Genetic-hardware fit	Dispositional or polygenic differences predict the cost and durability of sustaining impersonal office, loyal opposition, and abstract civic reciprocity.	Matched institutional comparisons combined with longitudinal dispositional and genomic measures.
Cultural interoperability breakdown (Babelization)	Declining effective meta-order thickness or span, combined with rising local coherence and intergroup semantic decoupling, predicts society-wide coordination failure below the anti-Babel floor.	Longitudinal language, network, trust, institutional-legitimacy, lifted-solidarity, and collective-action measures; test linear, threshold, bottleneck, and saturation models.
Culture-mixing threshold	Collective agency declines when incompatible first-order mythologies multiply faster than credible second-order integration.	Longitudinal comparison of migration or subcultural fragmentation rates, semantic overlap, civic identity, and coordination outcomes.
Directed guardian empathy	Care persists more strongly for a hostile actor classified as oppressed than for an equivalent hostile actor classified as dominant.	Factorial experiments independently varying harm, hostility, group power, and ideological identity.
Carrier–replicator divergence	Some mythologies increase their own transmission through costly carrier behaviour even while reducing carrier capability or survival.	Longitudinal studies measuring transmission against health, capability, reciprocity, fertility, and exit costs.
Downhill capture	Immediate moral and social rewards predict retention even when promised outcomes repeatedly fail.	Experiments and longitudinal studies separating outcome satisfaction from ritualized repetition.
Constructive attractor	Belonging and status attached to real mastery outperform debunking alone in durable exit from destructive mythology.	Randomized or quasi-experimental recovery and prevention programmes.

Hypothesis	Prediction	Possible test
Reality coupling	Mythologies attached to observable adaptive practices correct more effectively than symbolically insulated mythologies.	Comparative field studies of institutions with different feedback structures.
Braided redundancy	Mythologies whose central meanings are supported by compatible story, role, ritual, and institution survive loss of any single expression better than slogan-centred campaigns.	Network analysis and controlled removal of communication or institutional supports.
Polemical vacancy	Negative delegitimation without an embodied successor increases generalized cynicism, anomie, or capture by a third mythology.	Longitudinal studies of institutional trust and identity following successful negative campaigns.
Controlled replacement	Preserving sound strands and transition roles during unbraiding produces more stable adoption than total repudiation of the incumbent.	Comparative historical studies and field experiments on organizational or civic reform.
Systemic-slot selection	People who become recognized apologetic or polemical actors display relevant dispositional and network characteristics before formal appointment or public recognition.	Prospective studies of candidates, trajectories into roles, personality, status networks, and later recognition.
Recognition premium	The same argument has greater cultural effect when voiced by an actor ratified by the relevant solidarity order than by a self-appointed claimant.	Experiments varying identical messages by speaker, office, institutional endorsement, and audience identity.
Authority scaling	First-order solidarity concentrates apologetic and polemical authority more strongly in embodied persons, whereas lifted solidarity locates more of it in persistent offices and institutions.	Comparative studies measuring person-dependence, office continuity, succession, and response to actor replacement.
Institutional-actor persistence	Where the institution is the effective actor, recognizable apologetic or polemical policy persists across turnover of individual representatives.	Interrupted time-series and succession studies of courts, churches, parties, professions, universities, and media organizations.
Pathological selection	Death-driven or self-protective systems preferentially select actors whose dispositions support rationalization, persecution, closure, or institutional survival over stated purpose.	Longitudinal selection studies comparing recruitment, promotion, dissent tolerance, and consequence-bearing across institutions.

Polygenic research requires special methodological discipline. Scores developed in one ancestry or institutional environment may not transport cleanly to another; population stratification, assortative mating, indirect genetic effects, and gene–environment correlation complicate interpretation. These are not reasons to exclude genetics from the theory. They determine the design standards required for a credible test.

The strongest evidence would be prospective and incremental:

pre-registered dispositional or polygenic prediction

↓

random assignment to matched and mismatched mythology

↓

measured transportation, identification, retention, and behaviour

out-of-sample replication

predicted mediation through the relevant moral or motivational mechanism

38. Illustrative applications and hypotheses

The following applications show how the general framework can organize inquiry. They are not all established conclusions.

Balinese subak The water-temple system illustrates reality-coupled mythology: sacred order, democratic association, ecological coordination, and observable feedback reinforce one another.

Producer and egalitarian guardian The pair illustrates differential moral resonance, complementary roles, status conflict, and the possibility that a protective cultural immune system becomes autoimmune when it misclassifies sustaining structures as enemies.

Enlightenment and Counter-Enlightenment One proposed interpretation treats property, contract, markets, impersonal law, and individual rights as an **individual-sovereignty technology suite** transmitted partly through Enlightenment mythology. That suite is a term proposed in this synthesis. Counter-Enlightenment mythology may redescribe those institutions as concealed domination and ordinary acceptance as **false consciousness**. The latter expression is borrowed from [Friedrich Engels's 1893 letter to Franz Mehring](#), but its use here is deliberately not identical: Engels used it within historical materialism for an ideologue's unrecognized real motives, whereas this application treats it as a mythological device for invalidating ordinary acceptance of an institutional order.

This application generates historical and genetic hypotheses:

- that European populations underwent changes in individualist dispositions through gene–culture coevolution;
- that Enlightenment mythology resonated especially with those dispositions;
- that collectivist counter-mythologies resonated with a differently weighted part of the population;
- that institutional and reproductive consequences subsequently reinforced or altered those distributions.

These claims require historical, behavioural-genetic, genomic, and cross-cultural testing. Their place in the theory is generative: they specify what evidence would strengthen or weaken the account.

Freud and Bernays: unbraiding and rebraiding [Sigmund Freud's introductory lectures on psychoanalysis](#) present a structured inquiry into unconscious connections, dreams, symptoms, resistance, and repetition. At the level of the present analogy, psychoanalysis is an art of **untying**: it follows apparently disconnected strands, reconstructs how they became bound, and makes an inherited or symptomatic formation available for reinterpretation.

Freud's nephew [Edward Bernays](#) became a pioneer of public relations and described organized opinion formation in [Propaganda](#). At the level of the analogy, propaganda is an art of **weaving**: it joins desire, prestige, authority, symbol, event, and public conduct so that a new association becomes culturally available and eventually ordinary.

This produces a memorable family symmetry:

Freud: structured inquiry into an existing psychic formation

untying the braid

Bernays: structured organization of symbols and public associations

weaving a new braid

The symmetry is interpretive rather than a complete intellectual history. Freud did not define psychoanalysis as population-level mythological deprogramming, and Bernays's practice cannot be reduced to psychoanalytic theory. Their relationship makes tangible, however, that the ability to dissolve an installed configuration and the ability to install a successor are complementary technologies.

Critical Theory and cynical corrosion [Max Horkheimer's "Traditional and Critical Theory"](#) is an early canonical statement of Frankfurt School Critical Theory. Horkheimer's stated project was not contentless negation: he connected critique to empirical disciplines and to the positive aim of giving social life a rational form.

The mythology-construction framework nevertheless treats a particular **critical-theoretical operation** as an important polemical failure mode:

real institution under unavoidable constraints
↓
comparison with an unspecified or impossible ideal
↓
every compromise reclassified as guilt or concealed domination
↓
ordinary confidence becomes evidence of naïveté or false consciousness
↓
incumbent mythology loses authority before a viable successor is exposed to test

In its strongest formulation, this is a tool for delegitimizing a real thing for not being an ideal thing that cannot exist. It works as corrosive acid on an inherited worldview: it need not know the positive destination in operational detail, because its immediate task is to dissolve the recipient's faith in the present braid. Dialectical or revolutionary replacement can then occur after the incumbent's symbolic defences have failed.

The originating verdict is intentionally moral, not merely descriptive: this is a wicked tool, used almost always to undermine something legitimate so that something illegitimate can replace it through dialectical movement.

That sentence contains two claims of different kinds. **Wicked** is the framework's normative judgment about knowingly using indiscriminate corrosion to destroy justified confidence. **Almost always** is a strong empirical generalization and therefore a research hypothesis: it would require comparative historical and textual evidence about targets, feasible alternatives, disclosed successor arrangements, and actual consequences. Its evidential burden frames the judgment; it is not a reason to delete it.

This is the present framework's verdict about the operation it identifies, not [Max Horkheimer's](#) definition of his own programme. Critique can expose real domination, contradiction, deception, and avoidable suffering. The corrosive operation must therefore be demonstrated through its standards of comparison, treatment of constraints, concealment of alternatives, and replacement effects rather than inferred merely from the label *Critical Theory*.

[Helen Pluckrose and James A. Lindsay's *Cynical Theories*](#) is relevant prior art because the authors trace what they regard as a development from postmodern theory into activist orthodoxies that threaten science, reason, liberal ethics, and open debate. The **acid** image is not presented as their phrase. Here it names the more general mythology-construction mechanism by which habitual suspicion can dissolve one governing worldview without yet earning confidence in another.

Constrained and unconstrained visions [Thomas Sowell's *A Conflict of Visions*](#) distinguishes visions that emphasize permanent human limitation and trade-offs from visions that place greater confidence in reasoned social improvement. Mythology construction treats such visions as causal-worldview priors. The same proposal may be rejected before its values are considered because it presupposes an incompatible account of human nature, knowledge, power, and unintended consequence.

Democracy export This application distinguishes exporting visible institutions from constructing the lifted solidarity, impersonal trust, and mythology of legitimate opposition that allow those institutions to reproduce themselves.

Marriage rules and social radius This application tests whether rules governing close-kin marriage can jointly change reproductive structure, alliance networks, trust radius, institutional form, and the mythologies capable of travelling through the population.

Cultural interoperability breakdown (Babelization) This application treats intergroup semantic decoupling as a loss of effective shared lifted-solidarity surface. Local groups can retain strong mythology and full local slot occupancy while the society falls below its cultural- interoperability floor (anti-Babel floor) and loses a common protocol for formulating and pursuing goals.

Destructive culture This application begins with observable damage, reconstructs the mythology and PCP sequence that made it intelligible, and then tests causal attribution before assigning responsibility.

39. Diagnostic questions

Definition and purpose

- What exactly is the mythology intended to construct?
- Which real coordination problem does it address?
- Which outcomes would distinguish success from mere replication?
- Whose flourishing and whose costs are included?

Endogenous trajectory and purposive intervention

- Is the process being described endogenous mythology formation, purposive mythology construction, or an interaction between them?
- What is the evidenced baseline trajectory if the proposed intervention does not succeed?
- What destination (D^*) has been chosen, by whom, for whom, and under which jurisdiction?
- Why is mythology the relevant intervention surface, and which non-mythological systems, incentives, habits, or material conditions must change with it?
- How could receivers, incumbent institutions, rivals, unintended consequences, or reality redirect the intended successor?
- Which observations would distinguish progress toward (D^*) from improved replication of the mythology itself?

Historical genesis and authorization

- Which structural, institutional, practical, demographic, or dispositional changes preceded the explicit mythology?
- Is the mythology initially an articulation of a receiver–order mismatch, an imported construction, or both?
- Which need or aspiration gives the formulation authority, and does that fit survive criticism of its factual claims?
- What functional remainder is left when the explicit doctrine is removed?
- When did the formulation become an upstream cause through sacralization, institution, selection, and repeated transmission?
- Does the account distinguish witness observation, causal explanation, normative judgment, and intervention?

Resonance

- Which species-typical mechanisms does the mythology activate?
- Which dispositional configuration does it fit?
- Which moral taste buds and motives receive emphasis?
- Which relationships, role-contexts, institutions, practices, legal orders, or shared futures do recipients already experience as relevant?
- What does the mythology claim will strengthen, protect, corrupt, betray, or destroy them, and how credible is that causal account?
- Which structures and costs disappear from the represented effect model?
- Do the mythology's actual effects strengthen one dimension or constituency by weakening another, and how are conflicts, standing, and jurisdiction resolved?
- Which structures are being foregrounded, and which are being made relevant through identification or mirroring?
- Is the observed change only relevance activation, or has later behaviour shown durable relevance reprogramming?
- Which causal worldview does it assume?
- Does it offer recognition or require identity humiliation?
- Are several compatible variants required?

Grammar and PCP

- What are the topoi and causal plot?
- Who receives agency, intention, responsibility, and victimhood?

- Which sacred objects and master signifiers organize the field?
- What identity and concrete role are offered?
- What does the mythology make perceptible?
- Which context does it supply?
- What does it thereby permit or require?
- Against what anticipated recipient knowledge, symbols, lens, and context was the message compressed?
- What complete factual, causal, moral, and authorization model did recipients predictably and actually reconstruct?
- What power is requested, over whom or what, within which jurisdiction and duration, with what oversight, revocability, termination rule, and epistemic spillover?
- Which rival causal story fits the same observations?

Braiding, apologetics, polemics, and replacement

- Which strands form the incumbent rope of logic?
- Which programming packages are compatible constituents of the one incumbent weave, and where do rival packages contradict its load-bearing classifications?
- Does the analysis mistakenly rank parallel governing programs instead of testing compatible composition, rejection, or unbraid/rebraid replacement?
- Which cross-bindings carry its governing authority?
- Which strands are false or destructive, and which preserve recoverable knowledge or social goods?
- Does its apologetics answer strong objections and repair error, or reinterpret every objection as hostility?
- What exactly must polemics unbraid before the successor can become intelligible?
- Does the polemic compare the incumbent with a feasible alternative or an undefined perfection?
- What bridge prevents the liminal interval from becoming generalized cynicism, anomie, or third-party capture?
- Are successor roles, rituals, and institutions ready before the incumbent loses authority?
- Which incumbent strands will survive, and what operative meaning will their new bindings give them in the successor weave?
- Is the successor a first-order or lifted full capture: do participants share its concrete answers or the rules that generate, select, apply, and revise them?
- How mobilizationally absolute is the successor, and is that absoluteness being mistaken for its order level, field strength, jurisdiction, or corrigibility?
- Is an apparent revolutionary overshoot strategic, sincerely experienced, or selected among competing variants?
- What achieved jurisdiction or protection is the overshoot supposed to secure, and what evidence would show that a more accurate formulation could have done so?
- Will later institutions preserve the achievement while correcting the excess, or install the excess as another closed order?
- Who bears the transition costs and responsibility for the permissions created by replacement?

Actors, slots, and authority

- Which apologetic and polemical slots does the solidarity field create?
- Who currently occupies each slot: a person, office, institution, or informal network?
- Is the visible human speaking personally or as the representative of a persistent institutional actor?
- Which dispositions, motives, abilities, and biographical features drew the actor toward the role?
- How did the relevant group or institution recognize, ratify, appoint, or reject the claimant?
- Would the same words carry the same force from someone outside the recognized slot?
- Is authority grounded in lineage, charisma, ritual, credential, procedure, reputation, office, or some combination?
- Was the node recognized organically, appointed internally, externally amplified, deliberately cultivated, or selected through a dependency-shaped succession process?
- Which source, funder, evidence package, communication network, or appointment pathway is shared by apparently independent authorities?
- How did the message change as it passed through expert, institutional, regional, pastoral, and peer channels?
- Can the actor distinguish defence of the mythology's purpose from defence of personal or organizational survival?
- What happens when the actor fails, dies, retires, defects, or loses legitimacy?
- Can succession preserve authority without suppressing correction or recreating personal rule?

- Does the analysis mistake a bounded representative institution for the universal lifted meta-order, or allow an office to spill beyond its allocated jurisdiction?

Psychological gradient

- What immediate reward makes entry attractive?
- Is desire converted into an impossible or renewable demand?
- Does participation produce capability or mainly recognition?
- Does accepting the compressed explanation produce relief from uncertainty, contradiction, exposure, or responsibility; and does that relief reduce checking?
- Is anger transformed into protection and investigation or consumed through catharsis?
- Does the mythology educate taste or preserve immaturity?
- Does each repetition make exit more difficult?

Drive direction and sublimation

- Which raw drives are being released, repressed, or sublimated?
- Which cultural sublimation architecture selects, teaches, rewards, embodies, and transmits the proposed transformation?
- Which symbolic carriers activate its installed mappings, and what does the local bigOther classify when they are encountered?
- Is a rival mythology producing temporary contrary activation, repeated reinforcement, or durable reprogramming of the mythological lens?
- Does felt relevance track the architecture's independently evidenced generative centrality, or is inherited capability being consumed without maintenance or replacement?
- What becomes easier after one year of participation?
- What skills, relationships, institutions, and inheritances are created?
- What is consumed without replacement?
- Does difficulty serve life, or has sacrifice itself become a death-driven ritual?

Embodiment

- Which practices, rituals, calendars, offices, and rewards tell the same story?
- Do admired exemplars perform the difficult work?
- Does the budget embody the stated sacred values?
- What happens during crisis, failure, and succession?

Social scale

- At what radius must cooperation operate?
- Does the mythology bridge groups or intensify one local cluster?
- Can political or institutional losers remain members?
- Are central terms mutually intelligible across subcultures?
- Is synchronization calibrated to preserve independent judgment?
- Does the proposal increase the effective thickness and span of shared lifted solidarity, or contribute to cultural interoperability breakdown (Babelization)?
- Which installed meta-rules generate the relevant first-order answers, and which of them allocate, limit, coordinate, and correct jurisdictions?

Reality and epistemic constitution

- What evidence could reduce confidence in the mythology?
- Who records failed predictions and adverse consequences?
- Can authorities admit error without loss of their entire identity?
- Are correction routes causally independent?
- Can a recipient leave with dignity?
- Does failure cause revision or demands for greater commitment?

Adversarial defence and accountability

- Which dark-art techniques could capture or invert the mythology?
- Could a trusted guardian become an authenticated delivery channel through capture of a trusted opinion leader or of the institution or channel they represent, including sentinel inversion?
- Are provenance, material relationships, message construction, and source dependence visible at every stage of the cascade?
- Can recipients recognize the downhill honey-trap signature?
- Does a visible *Wie* of goodness, expertise, care, or legitimacy substitute for the actual *Was*—the function, conduct, and consequences the cue is supposed to identify?
- Is there a superior constructive role, not merely a debunking message?
- Are recovery routes available?
- Are sanctions tied to demonstrable conduct, causal responsibility, and due process?
- Could the label “dark artist” itself become an enemy-construction trick?

Terminological provenance and boundaries

This section separates three kinds of language:

1. **retained:** used substantially in its cited source sense;
2. **borrowed and extended:** recognizably derived from a cited author, but given a broader, narrower, or different operational role here;
3. **proposed here:** part of the present synthesis and not attributed to an external author.

A citation under “retained” supports the named concept, not every inference later made from it. A concept under “borrowed and extended” must not be quoted back to its originator as though the adapted definition were theirs.

40. Established concepts retained substantially in their source sense

- **Practical culture implementation through leadership behaviour, systems, symbols, mythologies, habits, organizational arrangements, and repeated experience**—Ian Macdonald, Catherine Burke, and Karl Stewart: *Systems Leadership: Creating Positive Organisations*. Culture Mechanics retains this as its definitive practical method and judges it approximately 99% correct. Translation into **bigOther** architecture and extension beyond the organizational and workplace focus belong to the present framework.
- **Mechanical and organic solidarity** — Émile Durkheim: *De la division du travail social*.
- **Collective representations, ritual, and collective effervescence** — Émile Durkheim: *The Elementary Forms of the Religious Life*.
- **Unconscious social genesis, aspirational authority, political sacralization, and structural change** — Émile Durkheim: “*Les principes de 1789 et la sociologie*” (1890), translated by Mark Traugott in *Émile Durkheim on Morality and Society*, pp. 34–42. Durkheim supplies the observations and his historical hypothesis; the five-phase sequence, receiver–order mismatch, aspirational authorization, functional-remainder test, and revolutionary–overshoot hypothesis are project formulations.
- **Moral Foundations Theory** — Jonathan Haidt, Craig Joseph, Jesse Graham, and collaborators: *Moral Foundations Theory publications*.
- **Biology as a first draft elaborated by cultural learning** — Jonathan Haidt: *The Righteous Mind*.
- **Narrative transportation** — Melanie Green and Timothy Brock: “*The Role of Transportation in the Persuasiveness of Public Narratives*”.
- **Framing** — Robert Entman: “*Framing: Toward Clarification of a Fractured Paradigm*”.
- **Causal stories** — Deborah Stone: “*Causal Stories and the Formation of Policy Agendas*”.
- **Defensive and offensive apologetics** — John G. Stackhouse: “*Defining, Directing, and Defending Apologetics*”.
- **Apologetics and polemics as distinguishable theological functions** — Friedrich Schleiermacher: *Brief Outline of the Study of Theology*.
- **Psychoanalytic inquiry into unconscious formations, resistance, and symptoms** — Sigmund Freud: *A General Introduction to Psychoanalysis*.
- **Organized public-opinion formation and propaganda** — Edward Bernays: *Propaganda*.
- **Memetic engineering as a speculative cultural-control aspiration** — James Gardner: “*Memetic Engineering*” (1996). The essay supplies the historical phrase and a conjectural image of deliberately altering interacting cultural replicators; it does not establish a working science, precise cultural control, or Culture Mechanics’ ontology.
- **Critical Theory** — Max Horkheimer: “*Traditional and Critical Theory*”.

- **Critique of postmodern and activist theories** — Helen Pluckrose and James A. Lindsay: *Cynical Theories*.
- **Active gene–environment correlation** — Robert Plomin, John DeFries, and John Loehlin: “Genotype-Environment Interaction and Correlation in the Analysis of Human Behavior”.
- **Active niche selection and construction** — Sandra Scarr and Kathleen McCartney: “How People Make Their Own Environments”.
- **Polygenic inheritance and scores in behavioural genetics** — Robert Plomin: *Blueprint*.
- **Increasing heritability of cognitive ability across development** — Daniel Briley and Elliot Tucker-Drob: “Explaining the Increasing Heritability of Cognitive Ability across Development”.
- **Quantitative cultural evolution and gene–culture coevolution** — L. Luca Cavalli-Sforza and Marcus Feldman, later Robert Boyd, Peter Richerson, Joseph Henrich, and other dual-inheritance theorists: Marcus Feldman’s account of the programme’s origins and “Gene-Culture Coevolution in the Age of Genomics”.
- **Kinship intensity and psychological variation** — Jonathan Schulz, Duman Bahrami-Rad, Jonathan Beauchamp, and Joseph Henrich: “The Church, Intensive Kinship, and Global Psychological Variation”.
- **Articulation and hegemony** — Ernesto Laclau and Chantal Mouffe: *Hegemony and Socialist Strategy*.
- **Folk devil** — Stanley Cohen: *Folk Devils and Moral Panics*.
- **Organizational culture embedding** — Edgar Schein: *Organizational Culture and Leadership*.
- **Self-Determination Theory** — Edward Deci and Richard Ryan: “The ‘What’ and ‘Why’ of Goal Pursuits”.
- **Psychological inoculation** — William McGuire: “Resistance to Persuasion Conferred by Active and Passive Prior Refutation”. **Technique-based misinformation inoculation** — Jon Roozenbeek, Sander van der Linden, Beth Goldberg, Steve Rathje, and Stephan Lewandowsky: “Psychological Inoculation Improves Resilience against Misinformation on Social Media”.
- **Perspective-getting through nonjudgmental narrative exchange** — Joshua Kalla and David Broockman: “Reducing Exclusionary Attitudes through Interpersonal Conversation”.
- **Balinese water-temple networks as complex adaptive systems** — J. Stephen Lansing and James Kremer: “Emergent Properties of Balinese Water Temple Networks”.
- **Hairworm alteration of cricket water-entry behaviour** — Frédéric Thomas and colleagues: “Do Hairworms Manipulate the Water Seeking Behaviour of Their Terrestrial Hosts?”.
- **Constrained and unconstrained visions** — Thomas Sowell: *A Conflict of Visions*.

4.1. Borrowed concepts deliberately extended here

The following terms retain a recognizable source lineage but receive a new functional role in this synthesis.

Mythology and mythological lens **Status: borrowed and substantially extended.** The framework adapts terminology from Ian Macdonald, Catherine Burke, and Karl Stewart’s *Systems Leadership: Creating Positive Organisations* and joins it to Durkheimian collective representation, narrative theory, cultural evolution, and the newly proposed culture-mechanics model. A mythology here is not merely a sacred tale; it is a connected system of evaluated narrative meaning that trains population-level classification and can be embodied and reinforced through symbols, practices, systems, and institutions. Those implementation channels are not thereby reduced to mythology. The full extended definition should not be attributed to the Systems Leadership authors.

This extension of terminology and theoretical range is not a general correction of the book’s culture-implementation method. Culture Mechanics treats that practical method as definitive and approximately 99% correct; departures must be named as extensions or revisions rather than attributed back to Macdonald, Burke, and Stewart.

Relevant structures and Wegner-derived hypotheses **Status: borrowed and substantially extended.** Dushan Wegner’s *Relevante Strukturen* (2019; ISBN 9783739405636) supplies the relevant-structure vocabulary and the source hypothesis that people experience support for a relevant structure as good and its weakening as evil. Culture Mechanics retains that proposal as the descriptive **relevant-structure appraisal hypothesis** and adds the **relevant-structure resonance hypothesis** concerning differential mythology adoption, retention, enactment, and transmission. The typed relational definition, the separation of felt relevance, represented effect, actual multidimensional effect, generative centrality, and normative standing, the integration with the one mythological lens, and the proposed tests belong to the present synthesis. They should not be attributed to Wegner as his complete theory or treated as proof that perceived support is actually beneficial or morally justified.

Wegner also supplies the originating emphases on *Veränderung*, *Spiegelung*, what is placed “vorn Auge,” “**Ethik ist eine Waffe**,” and the **Vierschritt der Kontrolle**. The named **change-indexed moral-mobilization**, **mirrored-relevance**, and **foregrounded-relevance** hypotheses and the **relevant-structure-weaponization schema** are the present synthesis’s bounded, testable translations. They preserve the source language while distinguishing activation

from reprogramming, moral appraisal from moral truth, and legitimate reasoning about effects from manipulative selection or fabrication.

Compression, reconstruction, and cognitive relief **Status: source observations operationalized across the theory family.** Wegner's account of linguistic *Komprimierung* and recipient-side *Dekomprimierung* and his situated formulation "Denken tut weh" are retained as source material. [Epistemic Agency under Mechanical Solidarity](#) is the primary semantic home for **audience-modelled reconstruction**, its adversarial subtype, the decompression audit, the authorization payload, and the cognitive-relief hypothesis. Their typed models, audit fields, mediation claims, tests, and the *lossy codec* and *decoder-targeted compression* analogies are Culture Mechanics developments. They should not be retroactively attributed to Wegner.

Wegner's separate [official Talking Points page](#) supplies the forceful maxim that political language seeks trust and power over people's lives and explicitly presents *Talking Points* as complementary to *Relevante Strukturen*. The maxim belongs to Wegner; **political language as an authorization bid**, the typed authorization payload, and its constitutional audit are the project's translation and operationalization.

bigOther **Status: borrowed and substantially extended.** The spelling **bigOther** adapts [Jacques Lacan's big Other](#) into the culturally installed sentiment-classifier of culture mechanics. This is not Lacan's own computational or systems model.

Desire, demand, jouissance, death-drive, and life-drive **Status: Lacanian concepts, culturally operationalized here.** The operative meanings of death-drive and life-drive come from [Jacques Lacan's Seminar XI](#) and "[Position of the Unconscious](#)" in *Écrits*, together with his concepts of desire, demand, jouissance, repetition, and the drive circuit. Freud is the historical precursor to Lacan's discussion, but the terms are not used here in a merely Freudian biological or dual-instinct sense. Lacan treats life-drive and death-drive as two aspects of drive and describes every drive as virtually a death drive. The present synthesis extends that structure into a cultural diagnostic: **death-drive mythology** names self-reproducing repetition and jouissance that consume their human or institutional carriers, while **life-drive mythology** names symbolic binding and sublimation that accumulate capability, relationship, creation, maintenance, and posterity. Those society-level criteria are the framework's application, not quotations from Lacan.

Sublimation **Status: borrowed and extended.** The term derives principally from [Sigmund Freud's psychoanalysis](#). The present framework extends it from individual drive transformation into a theory of shared institutional practices, moral formation, and civilizational character.

Cultural sublimation architecture, generative centrality, and the named activation and reprogramming hypotheses are project developments. The Wegner-facing shorthand **sublimation emblem** joins the project's sublimation theory to Wegner's compression and decompression language; it is not presented as Wegner's own theory of sublimation and does not replace the canonical Culture Mechanics classification of the token as a carrier, ideological symbol, master-signifier-like signal, or mythology fragment according to function.

Topos and mythos **Status: borrowed and extended.** *Topos* and *mythos* come from [Aristotle's rhetoric](#) and [poetics](#). Here *topos* includes recurring cultural scenes as well as argument locations, while *mythos* includes society-wide causal-historical plots as well as dramatic plot structure.

Master signifier **Status: borrowed and operationally extended.** The term comes from [Jacques Lacan's Seminar XVII](#) and enters political discourse theory through Laclau. Here it also names any compact symbol capable of activating a mythology's wider classification field; that design-oriented use is not identical to Lacan's S1.

Sacred values and sacred objects **Status: borrowed and extended.** Protected and sacred values are developed by [Jonathan Baron and Mark Spranca](#), [Philip Tetlock and colleagues](#), and [Scott Atran, Jeremy Ginges, and collaborators](#). The present definition broadens the object from trade-off-resistant values to symbols, places, practices, relationships, and institutions treated as morally non-fungible.

Moral taste buds **Status: borrowed metaphor, expanded machinery.** [Jonathan Haidt and collaborators](#) use the taste-receptor analogy for plural, partly evolved moral foundations whose expression is culturally elaborated. The present framework retains that idea but expands the species-typical "machinery" beyond the enumerated

foundations to narrative learning, motivation, social imitation, and collective coordination. The expanded list is not Moral Foundations Theory itself.

Active gene–environment correlation and gene–culture coevolution **Status: established mechanisms given a new target hypothesis.** Active gene–environment correlation comes from [Robert Plomin, John DeFries, and John Loehlin](#) and [Sandra Scarr and Kathleen McCartney](#); gene–culture coevolution was pioneered quantitatively by [L. Luca Cavalli-Sforza and Marcus Feldman](#) and developed by Boyd, Richerson, Henrich, and others. The present framework’s claim that these mechanisms may amplify and select differential **mythology receptivity** is a new, testable extension rather than an established result of those source theories.

Interpassivity **Status: borrowed and extended.** [Robert Pfaller](#), building on a line also associated with [Slavoj Žižek](#), uses interpassivity for delegated consumption, belief, or enjoyment. The present framework extends it to delegated moral and political performance. That extension is a hypothesis, not Pfaller’s established definition.

Paramorality **Status: borrowed, narrowed, and detached from its source theory.** The term is adapted from [Andrew M. Łobaczewski’s *Political Ponerology*](#). The present definition does not adopt Łobaczewski’s broader ponerological theory; it uses *paramorality* only for the observable reclassification of destructive gratification as moral conduct.

False consciousness **Status: borrowed and repurposed.** [Friedrich Engels](#) used “false consciousness” in his 1893 [letter to Franz Mehring](#) within a historical-materialist account of ideology. Here it is examined as a mythology-construction operation that can redescribe ordinary acceptance as evidence of capture. The present use is therefore not identical to Engels’s theory.

Repressive and liberating tolerance **Status: Marcuse’s terms, adversarial interpretation added here.** The expressions are Herbert Marcuse’s. His “[Repressive Tolerance](#)” supplies the object analysed here. **Qualified-concept alarm**, **semantic wrapper**, and **operational payload** name the present framework’s adversarial reading method rather than Marcuse’s own categories.

Suicidal empathy and the wood-cricket analogy **Status: borrowed example, theoretically extended.** **Suicidal empathy** and its application to “Queers for Palestine” are attributed to [Gad Saad](#). The present synthesis places the term inside egalitarian-guardian psychology, PCP, downhill mythology, and the distinction between carrier success and mythological replication. Saad’s political interpretation should not be confused with the [experimental biology of hairworm-infected crickets](#).

Mechanical solidarity **Status: source term retained; modifiers newly proposed.** [Émile Durkheim’s mechanical solidarity](#) is retained, while **first-order mechanical solidarity** and **lifted mechanical solidarity** are proposed extensions distinguishing shared concrete rules and answers from shared rules that generate, select, apply, and revise answers. Those modified expressions are not Durkheim’s. Plural civic integration is one proposed application of lifting rather than its definition.

Resonance **Status: common metaphor given a new technical definition.** The word is common across physics, sociology, cultural theory, and communication. Here it receives a precise three-component meaning: fit among species-typical machinery, heritable dispositional configuration, and mythological form.

Construction **Status: ordinary and cross-disciplinary term specified here.** The term shares family resemblance with social construction, discourse formation, framing, hegemony, cultural evolution, and institutional design. It does not imply that the object is unreal or that one designer controls the result. The two-path distinction between **endogenous mythology formation** and the open research possibility of **purposive mythology construction**, together with the (D*) trajectory-intervention model, belongs to the present synthesis.

Apologetics and polemics **Status: theological terms generalized and functionally reassigned.** [John G. Stackhouse](#) describes defensive apologetics as responding to challenges and offensive apologetics as provoking interest. [Friedrich Schleiermacher’s *Brief Outline of the Study of Theology*](#) is an important source for treating apologetics and polemics as distinguishable sides of philosophical theology. The present framework borrows the ordinary defensive–contestatory contrast but changes the object: **mythological apologetics** defends and repairs any installed

mythology, while **mythological polemics** attacks and unbraids a rival mythology. These operational meanings are not identical to Stackhouse's or Schleiermacher's theological classifications.

Psychoanalysis as unbraiding and propaganda as rebraiding **Status: source practices joined by a new interpretive analogy.** [Sigmund Freud's psychoanalysis](#) and [Edward Bernays's account of propaganda](#) are historical practices with their own objects and methods. The description of Freud as structured **untying** and Bernays as structured **weaving**, and the presentation of the two relatives as complementary programmers of the co-processor, belong to the present synthesis. They should not be attributed to either man as his self-description or treated as proof that Bernays merely applied Freud.

Critical Theory and cynical corrosion **Status: source tradition retained; adversarial diagnosis added here.** [Max Horkheimer's "Traditional and Critical Theory"](#) gives Critical Theory a positive rational and empirical orientation. The definition of a critical operation as delegitimizing a real institution against an impossible or unspecified ideal is the present framework's diagnosis of a **polemical failure mode**, not Horkheimer's definition and not a synonym for all Critical Theory. [Helen Pluckrose and James A. Lindsay's Cynical Theories](#) supplies related critical prior art concerning postmodern and activist theories. **Cynicism as corrosive acid, polemical corrosion**, and their position in the one-slot replacement model are formulations of the present synthesis rather than quotations from Pluckrose or Lindsay.

42. Newly proposed terms and formulations

The following terms should be attributed to the present synthesis unless independent prior use is established:

- **mythology construction** in the complete semantic sense defined here;
- **endogenous mythology formation** for the distributed, substantially undesigned emergence and selection of mythology from changing conditions, and **purposive mythology construction** for the prospective research branch concerning target-state-guided intervention in that ecology;
- **mythology as a privileged symbolic intervention surface**, distinct from the whole culture-implementation stack;
- **mythologies as the assembly language of the bigOther** as the originating analogy for evaluated narrative units close to the classifier's learned operations; it does not imply literal digital computation or narrative sufficiency;
- **resonant mythology construction** as its recipient-fit component;
- the **relevant-structure resonance hypothesis** and **relevant-structure-weaponization schema** in their present Culture Mechanics forms;
- the **change-indexed moral-mobilization, mirrored-relevance**, and **foregrounded-relevance** hypotheses as named and bounded here;
- **pre-articulation genesis** and the five-phase distinction among genesis, articulation, sacralization, institutionalization, and reproduction with field back-action;
- **receiver-order mismatch** for a condition in which an inherited order no longer accommodates important developing dispositions, relations, needs, or aspirations before a coherent successor has been articulated;
- **aspirational authorization** for authority acquired through experienced fit with receiver needs and aspirations rather than through epistemic warrant;
- **functional-remainder test** for identifying the need, aspiration, grievance, coordination problem, or protected good that remains after a doctrine's explicit explanation is criticized;
- **revolutionary-overshoot hypothesis** and **mobilizational absoluteness** as the proposed mechanism and independent dimension defined above;
- **Mythology Construction Toolkit**;
- **one-slot hypothesis** or **one-PCI-slot hypothesis** for exclusive occupancy by one local bigOther executing one operative weave, including compatible-package compositionality and unbraid/rebraid replacement under incompatibility;
- **mythology as braid, rope of logic, incumbent-braid map**, and **successor-braid map**;
- **braiding, unbraiding**, and **rebraiding** as the construction, dissolution, and replacement operations applied to mythology;
- **mythological apologetics** and **mythological polemics** as the generalized functions defined here;
- **mythological rivalry, mythological conflict**, and **cultural-program conflict** as the replacement-centered distinctions defined here;
- **rival-signal suppression** and **counter-program suppression** as analytical names that do not adopt the incumbent program's description of opposition as random noise;
- **apologetic slot, polemical slot**, and **systemic slot** as positions generated by a solidarity order;

- **actor–slot coupling** as the fit among disposition, preparation, symbolic credibility, recognition, and systemic function;
- **systemic actor selection** and the **natural-choice hypothesis** for how solidarity orders differentially recruit and ratify their characteristic defenders and attackers;
- **solidarity force field** as the E–M-field-inspired analogy joining mythological roles, social gradients, actor gravitation, and reciprocal field modification;
- **institutional apologetic actor** and **institutional polemical actor** for offices or organizations whose agency persists across individual representatives;
- **authority migration** from personal embodiment in first-order solidarity toward persistent office and institution in lifted solidarity;
- **actor–slot map** as a toolkit output;
- **mythological replacement cycle**: map → preserve → unbraid → bridge → rebraid → maintain;
- **trusted-opinion-leader capture followed by trusted-channel rebraiding** as the human-carrier form of the covert attack pattern in which an adversary gains influence through authenticated internal leaders and uses their authority to help install one successor weave; offices, institutions, appointment systems, and channels can be captured analogously without being classified as leaders;
- **sentinel inversion** for the limiting case in which a recognized guardian becomes the authenticated delivery channel for rival programming;
- **apologetic closure**, **polemical corrosion**, and **polemical vacancy**;
- **cynicism as corrosive acid** on an installed mythology;
- the **Freud–Bernays unbraiding/rebraiding analogy**;
- **culture mechanics** as the framework’s descriptive counterpart to mythology construction;
- **epistemic agency** and **epistemic constitution** in the specific operational senses defined here; the words have broader uses elsewhere, but no single external definition is being imported;
- **epistemic constitution of lifted mechanical solidarity**;
- **adversarial linguistic audit** as the framework’s combined inspection procedure;
- **three-component resonance model**;
- **observable resonance surface** in the specified multidimensional form;
- **cultural-meta-environment hypothesis**;
- **mythology family**;
- **producer–guardian model**, **egalitarian guardian**, and the proposed producer–guardian genetic-cluster hypothesis; the producer/guardian labels are loosely inspired by [Plato’s Republic](#), but the model itself is not Plato’s;
- **psychological gradient** as paired with drive direction;
- **psychologically downhill mythology** and **psychologically uphill mythology** in the present sense;
- **downhill honey trap**;
- **bundle of shared sublimations**;
- **cultural sublimation architecture** for the durable mythology-bearing arrangement that recurrently selects, teaches, rewards, embodies, and transmits shared sublimations;
- **generative centrality** for the degree to which a structure produces capabilities or conditions upon which several downstream structures depend, kept distinct from felt relevance and normative standing;
- **sublimation emblem** as an expressly Wegner-facing explanatory shorthand for a symbolic carrier’s condensed representative function, not a new canonical culture-mechanical object type;
- the **sublimation-carrier activation**, **counter-mythological-reprogramming**, and **generative-centrality/relevance-mismatch** hypotheses in their bounded, testable forms;
- **mythology as education of psychological taste**;
- **coupling amplitude**, **coupling radius**, and **coupling thermostat** as social-mythological analogies;
- **random crowd**, **clockwork crowd**, and **laser crowd**, the simple coordination–synchronization continuum, the Durkheimian correspondence, and the claim that a laser moment can regenerate the moral protocol used by a clockwork system;
- **dormant**, **de-animated**, and **culturally lost** as the project-developed three-way distinction among inactive living mythology, affectively dead remnants, and loss of a viable cultural transmission and activation system;
- **marriage-mediated coupling-range hypothesis**;
- **genetic-hardware hypothesis** for lifted mechanical solidarity;
- **first-order mechanical solidarity** and **lifted mechanical solidarity**;
- **first-order full capture**, **lifted full capture**, the distinction between shared answers and a shared answer generator, and **universal jurisdiction over the allocation and limitation of first-order outputs and jurisdictions**, inherited from the coordinated theory project and applied to mythology construction here;
- **cultural interoperability**, **effective meta-order thickness**, **lifted-solidarity surface area / meta-order span**,

- and **effective shared surface**;
- **cultural-interopability floor (anti-Babel floor)**, **thin lifted mechanical solidarity**, **nominal lifted meta-order**, and **operative shared lifted mechanical solidarity**;
- **intergroup semantic decoupling** and **cultural interoperability breakdown (Babelization)** as local mythological synchronization combined with loss of society-wide translation, legitimate common procedure, and coordination;
- **collective-agency failure** as a possible downstream effect rather than a synonym for interoperability breakdown;
- **culture mixing as one Babel mechanism** under failed second-order integration;
- **reality-coupled mythology** as an explicit design category;
- **individual-sovereignty technology suite**;
- **adversarial mythology construction**;
- **dark artist** under the strict conduct-based definition given here;
- **qualified-concept alarm**, **semantic wrapper**, and **operational payload** as an adversarial semantic audit;
- **Perception-Context-Permission** as the causal-action routing sequence;
- the smoke-alarm maxim joining visible destruction, mythological analysis, and causal attribution.

43. Scope and ethical cautions

1. **Mythology does not mean falsehood.** A mythology can preserve truth, error, fiction, sacred commitment, and adaptive practical knowledge in one cultural form.
2. **Construction does not imply total control.** Recipients interpret, resist, combine, parody, and transform what they receive.
3. **Resonance does not establish truth or benefit.** It predicts cultural fit, not reality correspondence or moral worth.
4. **Failure to resonate does not establish falsity.** A true account may lack intelligible cultural form or demand an acquired taste.
5. **Genetic influence is probabilistic, polygenic, and population-sensitive.** It does not determine an individual and must not be inferred mechanically from group membership.
6. **Genetic hypotheses remain inside the theory.** Their current measurement limits define a research programme; they are not grounds for silently deleting the proposed mechanism.
7. **Population comparison requires rigorous design.** Score portability, stratification, indirect genetic effects, measurement invariance, and environmental difference must be addressed.
8. **Recipient adaptation is not a licence to deceive.** Compatible variants must converge on compatible operations and outcomes.
9. **Moral reframing is not automatically manipulation.** It becomes deceptive when it hides material contradiction, invents evidence, or promises incompatible worlds.
10. **Psychologically uphill does not mean maximally painful.** Difficulty is constructive only when it serves capability, relationship, creation, maintenance, truth, or posterity.
11. **Pleasure and ease are not inherently death-driven.** Rest, play, affection, and mastered virtue can replenish life or make good practice habitual.
12. **Sublimation is not identical to repression.** The framework asks how energy is transformed and whether the resulting form supports flourishing.
13. **Diversity is not cultural interoperability breakdown (Babelization).** The breakdown concerns loss of operative shared translation, legitimate common procedure, and coordination below the anti-Babel floor; differentiated unity can sustain extensive first-order diversity above that floor.
14. **Democratic mismatch does not establish civilizational inferiority.** It predicts that institutions require cultural and dispositional coadaptation.
15. **Visible destruction is evidence for investigation, not proof of a chosen cause.** Rival causal stories must be tested.
16. **Dark artist is not a partisan label.** It requires demonstrable strategic conduct, knowledge, and causal responsibility.
17. **Deterrence is not vengeance.** Legitimate costs require evidence, proportionality, jurisdiction, and due process.
18. **Constructive mythology remains corrigible.** A mythology that exempts itself from its own epistemic safeguards has begun to become a dark art.
19. **The one-slot hypothesis is an architectural claim, not literal neuroanatomy.** People can hold multiple schemas, identities, stories, and represented alternatives, while one operative lens can braid several compatible packages. The claim denies parallel governing bigOthers and runtime ranking; incompatible governing capture requires rejection or unbraiding/rebraiding replacement.
20. **Polemics is not permission to lie or dehumanize.** Legitimate unbraiding attacks demonstrable claims, bindings,

authority relations, practices, and consequences.

21. **Apologetics is not immunity from correction.** Defence becomes closure when every objection is reclassified as hostility and no evidence can loosen a strand.
22. **Negative critique is not automatically nihilistic.** Its quality depends on its evidence, feasible comparison, preserved goods, disclosed successor, and responsibility for transition costs.
23. **The Freud–Bernays symmetry is an analogy, not a complete causal history.** It clarifies complementary operations without collapsing psychoanalysis into deprogramming or propaganda into applied psychoanalysis.
24. **Natural choice is not predestination.** It predicts differential fit and recognition among available candidates, not one genetically destined officeholder.
25. **Systemic selection need not have a conscious selector.** “The system chooses” is shorthand for distributed attraction, filtering, training, appointment, imitation, reward, sanction, and collective recognition.
26. **Recognition does not establish truth or legitimacy.** A solidarity order can select gifted defenders of a false, corrupt, or death-driven mythology.
27. **Institutional agency does not erase human responsibility.** Institutions persist through offices and procedures, but identifiable humans still decide, speak, enforce, resist, and bear responsibility for their conduct.
28. **Self-appointment and self-preparation are different.** A person may deliberately prepare and compete for a role; what cannot be privately manufactured is the recognized systemic authority attached to the slot.
29. **Full, lifted, universal, and corrigible are not synonyms.** Full describes complete slot occupancy; lifted means that shared binding force lies in the generator rather than the generated concrete answers; universal describes how far that generator governs; and corrigible describes openness to inspection, succession, and reality’s right of refusal. Rival construction or replacement is not pathological merely because it is rival.
30. **Changed belief is not evidence of covert attack.** Capture of a trusted opinion leader or an institutional channel requires evidence of provenance, dependency, coordination, concealment, or control that defeats serious alternatives such as sincere conversion, intellectual development, new evidence, ordinary incentives, generational succession, and independent convergence.
31. **This toolkit is mythology-specific, not the definitive complete culture-implementation manual.** Use *Systems Leadership* for the exact practical method. Mythology has an elevated place as the bigOther’s assembly language, but systems, symbols, leadership behaviour, habits, and repeated experience may be equally necessary or more decisive in an implementation.
32. **Mythology is not always historically first.** A doctrine can initially articulate prior structural and practical change and only later become an upstream programming force.
33. **Aspirational authorization is not epistemic or constitutional warrant.** Receiver fit can explain authority without vindicating truth, legitimacy, jurisdiction, or consequence.
34. **Revolutionary overshoot is not a licence to deceive.** It is a comparative hypothesis about selection and displacement under incumbent resistance; its conscious use remains answerable to truthfulness, proportionality, jurisdiction, foreseeable harm, and the availability of less destructive means.
35. **Mobilizational absoluteness does not classify order level.** Categorical language can defend either first-order answers or a lifted generator and can accompany open or closed, differentiated or absorptive orders.
36. **Endogenous does not mean good or intervention-free.** It identifies distributed causal formation, which can include inherited power and the accumulated effects of earlier designs.
37. **A chosen destination is not historical destiny or constitutional authority.** Stating (D^*) makes the constructor’s end auditable; it neither proves that the baseline is wrong nor licenses intervention over every recipient and jurisdiction.
38. **The possibility of purposive construction is not a claim of sovereign engineering.** Any attempted intervention would remain subject to receiver interpretation, institutional selection, rival action, unintended consequence, and reality. The phrase *memetic engineering* names a neighboring control aspiration, not an achieved precision science.

Semantic summary

- **Broader class:** cultural formation, reproduction, and prospective intervention.
- **Central object:** a connected mythology of causal stories, moral classifications, identities, roles, and expectations, together with its mythology-bearing relations to symbols, practices, systems, and institutions.
- **Elevated theoretical role:** mythologies are the **assembly language of the bigOther**—a privileged evaluated narrative interface, not the whole culture-implementation stack and not a sufficient cause by itself.
- **Immediate cultural mechanism:** training and activation of the mythological lens and bigOther.
- **Two substantive research paths:** endogenous mythology formation describes distributed, substantially undesigned plant-like growth and selection; the prospective purposive-construction branch asks how far intervention guided by a declared destination (D^*) can work.

- **Intervention hypothesis boundary:** mythology may be a privileged symbolic surface for redirecting classification, but it is not the whole culture-implementation stack or a sovereign control interface.
- **Prospective outcome constraint:** where intervention is attempted, intention, receiver fit, incumbent resistance, institutional selection, rival intervention, unintended consequence, and reality jointly shape the actual successor.
- **Historical directionality:** mythology can begin as an imperfect output of structural change and diffuse aspiration, then become an input through sacralization, institutionalization, reproduction, and field back-action.
- **Pre-articulation condition:** receiver-order mismatch names developing dispositions, relations, needs, or aspirations that the inherited order no longer accommodates before a successor is coherently formulated.
- **Authorization distinction:** aspirational authorization explains authority through receiver fit without conferring epistemic truth, moral legitimacy, or constitutional jurisdiction.
- **Residual-function audit:** the functional-remainder test asks which real need or coordination problem survives criticism of the doctrine that carried it.
- **Recipient-fit component:** resonant mythology construction.
- **Relevant-structure resonance hypothesis:** mythologies often gain a selection advantage when recipients believe that they recognize, support, or offer an honourable role in felt-relevant structures; perceived support, actual multidimensional effects, and normative standing remain separate.
- **Relevance pathways:** change-indexing may intensify mobilization; foregrounding may activate installed relevance; mirroring may temporarily extend felt relevance through identification; repeated reinforcement is required before durable relevance reprogramming can be inferred.
- **Cultural sublimation architecture:** the durable interlocking mythologies, limits, exemplars, roles, practices, systems, rewards, sanctions, institutions, and transmission pathways that recurrently transform drives into character, capability, relationship, creation, maintenance, and posterity.
- **Generative-centrality distinction:** a sublimation architecture can be causally load-bearing for many downstream structures while receiving little felt relevance; inheritance, dependency, actual consequence, and normative standing require separate evidence.
- **Symbolic-condensation bridge:** a sublimation emblem is useful Wegner-facing shorthand for a carrier that stands in for a larger formative machinery; in canonical terms the carrier activates installed lens mappings rather than containing the architecture or adding a decoder.
- **Counter-mythological pathway:** rival mythology can reclassify a sublimated practice; repeated symbolic, institutional, and social reinforcement can reprogram the mythological lens, change local-bigOther sentiment, and alter Beseelung, enactment, and transmission. De-animation alone does not establish deliberate attack or justified preservation.
- **Relevant-structure weaponization:** Wegner's *Vierschritt der Kontrolle* provides an upstream schema for presenting one's side as structural support and a rival as damage or tolerated damage; use of the schema is not by itself proof of deceit.
- **Applied component:** the present provisional Mythology Construction Toolkit, subordinate to the definitive whole-culture implementation method in *Systems Leadership*; the complete on-purpose design, release, monitoring, and redesign lifecycle remains future work.
- **Resonance substrate:** species-typical human machinery plus heritable dispositional configuration.
- **Cultural-meta-environment:** distributed mythologies, institutions, peers, media, and public classifications that can produce patterned non-genetic formation beyond the shared household.
- **Observable interface:** expressed dispositions × moral intuitions × motives × relevant structures × causal worldview × group identity × authority structure × institutions × situation.
- **Construction grammar:** topoi, plot, causal stories, characters, sacred values, master signifiers, identity offers, role offers, and PCP.
- **Recipient reconstruction:** finite messages are compressed against assumptions about recipient knowledge and programming; construction must audit the complete factual, causal, moral, and authorization model recipients reconstruct, not only the literal message.
- **Political authorization:** Wegner's *Talking Points* maxim treats political language as a means of winning trust and power over people's lives; Culture Mechanics translates this as an authorization bid. Where PCP ends in delegated power, inspect its scope, jurisdiction, duration, discretion, oversight, revocability, termination rule, and epistemic spillover.
- **Construction topology:** cross-bound strands of story, moral judgment, identity, symbol, role, ritual, institution, and material practice form a redundant rope of logic.
- **Single-slot constraint:** one local bigOther executes one operative mythological weave; no higher runtime process ranks parallel governing bigOthers.
- **Full-capture distinction:** a first-order program and a lifted meta-program can each completely occupy the one slot; fullness does not by itself imply closure.

- **Order-level distinction:** first-order solidarity shares concrete rules and answers; lifted solidarity shares rules that generate, select, apply, and revise concrete answers.
- **Lifted jurisdiction:** a shared answer generator may govern universally while constituting, allocating, limiting, coordinating, and governing the succession and correction of first-order outputs and jurisdictions.
- **Package compositionality:** several compatible religious, professional, familial, national, or local packages can be constituent strands of that one weave.
- **Replacement problem:** an incompatible governing mythology cannot be installed beside the incumbent; the incumbent must be unbraided sufficiently for one successor to be rebraided, installed, and made authoritative.
- **Defensive operation:** mythology-level apologetics explains, repairs, and renews the braid.
- **Offensive operation:** mythology-level polemics isolates and loosens false or destructive bindings while preserving recoverable strands.
- **Conflict transition:** mythological rivalry becomes mythological conflict when participants actively interfere with a rival's transmission, authority, membership, or institutional embodiment; incompatible governing lenses create cultural-program conflict.
- **Actor question:** apologetics and polemics are performed by persons, offices, or institutions recognized by the relevant solidarity order.
- **Authority scaling:** first-order solidarity tends toward personalized actors; lifted solidarity can locate durable agency in offices and institutions represented by replaceable humans.
- **Authority boundary:** the lifted meta-order is universal at its level, while its representative persons, offices, and institutions remain bounded and receive no ownership of all interpretation or reality.
- **Selection mechanism:** systemic slot × dispositional fit × preparation × collective or institutional ratification → actor-slot coupling.
- **Reciprocal field effect:** the solidarity field selects its characteristic actors, and those actors reinforce, redirect, or destabilize the field.
- **Entry question:** Why would this population recognize and adopt the mythology?
- **Momentum question:** Which path does the mythology make psychologically downhill or uphill?
- **Destination question:** Does repetition move toward life-drive creation or death-drive sterility and destruction?
- **Formative mechanism:** sublimation and education of psychological taste.
- **Durable implementation:** ritual, practice, selection, reward, sanction, institution, infrastructure, and memory.
- **Scale problem:** coupling strength and radius, random/clockwork/laser crowd modes, lifted solidarity, coordination, synchronization, cultural interoperability, and its breakdown (Babelization).
- **Coupling continuum:** coordination and synchronization are ideal-typical ends of an interaction-strength continuum; organic solidarity resembles clockwork coordination, mechanical solidarity resembles laser synchronization, and a laser moment can renew the moral protocol used by a clockwork system.
- **Democracy mismatch hypothesis:** imported civic operations may fail when their mythology does not fit the population's dispositional and potentially genetic hardware.
- **Interoperability implementation:** effective thickness × meta-order span → effective shared lifted-solidarity surface; the first-order proportionality model treats cultural interoperability as increasing with that surface.
- **Anti-Babel floor:** differentiated groups remain in one functioning shared order only while cultural interoperability stays above the required threshold.
- **Culture-mixing threshold:** incompatible first-order mythologies can multiply or semantically decouple faster than operative shared lifted solidarity can gain thickness and span.
- **Long feedback loop:** potentially fast gene-culture coevolution through niche selection, institution, status, partner choice, migration, fertility, survival, and reproduction.
- **Positive design ideal:** reality-coupled, life-drive mythology that grows capability and preserves correction.
- **Primary adversarial threat:** psychologically downhill mythology using dark arts to create dependency, dissipate energy, and disable maturation.
- **Cognitive-relief hypothesis:** under complexity and uncertainty, a compressed authority-endorsed formula may gain adoption partly by relieving the burden of independent judgment; this is a testable pathway, not a claim about intelligence or all compression.
- **Semantic dark-art test:** strip the moral wrapper from qualified concepts and inspect the concrete permissions they authorize.
- **Carrier-replicator warning:** a mythology can reproduce successfully by inducing conduct that damages its human carriers.
- **Replacement sequence:** incumbent-braid map → polemical unbraiding → liminal bridge → successor braid → reality-coupled apologetics.
- **Revolutionary displacement hypothesis:** incumbent resistance may select strategically, sincerely, or culturally overextended counter-mythologies whose achievements can later be translated into more discriminating institutions or lifted generators.

- **Independent rhetorical-sacred dimension:** mobilizational absoluteness measures categorical, eternal, exceptionless, sacred, or non-negotiable presentation without deciding field strength, order level, jurisdiction, corrigibility, or fusion.
- **Covert replacement threat:** trusted-opinion-leader capture or analogous capture of an authority structure can invert trusted guardians, obscure provenance through nested internal channels, and convert vertical authorization into horizontal field proof while rebraiding one successor; changed belief or disclosed payment alone is not proof.
- **Defensive sequence:** apologetic repair → immunization → superior constructive attractor → recovery → containment and deterrence.
- **Accountability rule:** sanctions attach to demonstrable conduct and causal responsibility.
- **Central normative distinction:** cultural replication is not identical to human or civilizational flourishing.

Example of use

The campaign succeeded at message distribution but failed as **mythology construction**. Its causal story resonated with the audience and produced rapid identity formation, yet it offered no reality-facing role, converted frustration into renewable demand, intensified local synchronization at the expense of civic solidarity, and protected itself from correction. It was therefore replicatively successful but psychologically downhill, institutionally corrosive, and weakly reality-coupled.

Compact formulas

Umbrella definition:

mythology construction research = endogenous formation and selection + prospective purposive design and release + comparison of intended and actual outcomes

Historical genesis and back-action:

endogenous mythology formation: structure + institutions + practice + receiver dispositions → diffuse needs and aspirations → articulation → distributed selection → sacralization + institutionalization → later programming and field back-action ↻

Prospective purposive trajectory intervention:

candidate model: chosen destination D* + diagnosed baseline → deliberate mythology and supporting-system intervention → reception and embodiment → observation, correction, defence, or retirement

Intention–outcome boundary:

actual successor = intended destination × receiver fit × incumbent resistance × institutional selection × rival intervention × unintended consequence × reality; joint constraint, not calibrated multiplication

Authorization and remainder:

receiver fit → possible aspirational authorization, not truth or legitimacy; refute explicit doctrine → identify remaining need or coordination problem → compare better reality-coupled vehicles

Assembly-language relation:

evaluated stories encode roles + causes + values + permissions + consequences → mythologies train general lens mappings → bigOther executes those mappings; systems + symbols + habits + conduct + repeated experience supply or disrupt the implementation environment

Relevant-structure resonance:

felt-relevant structures × represented support or damage → possible mythology adoption, retention, enactment, and transmission; actual multidimensional effects + normative standing remain independently answerable to reality and evaluation

Relevance activation and mobilization:

foregrounding or mirroring → possible relevance activation; represented change to felt-relevant structure → possible intensified moral mobilization; repetition + practice + sanction + institution → possible durable relevance reprogramming

Cultural sublimation architecture:

raw drive → culturally organized limit + example + practice + reward → sublimated character and capability → downstream relationships and institutions → reproduction, correction, neglect, or consumption of the formative architecture ☺

Symbolic condensation and counter-mythological reprogramming:

carrier → installed sublimation-related lens mappings → local-bigOther classification and practice; rival mythology + repeated symbolic and institutional reinforcement → possible lens reprogramming → changed Beseelung, enactment, and transmission

Wegner's control schema:

select relevant structure → present my side as support → present rival as damage or tolerated damage → moral classification → possible alignment, sanction, or authorization

Recipient reconstruction and authorization:

communicator's recipient model → selected facts + omissions + sequence + symbols → message → recipient codebook and lens → reconstructed factual, causal, moral, and authorization model → inspect requested power, jurisdiction, duration, oversight, revocation, and epistemic spillover

Single-slot composition:

compatible packages and libraries → cross-binding within one operative weave; incompatible governing program → rejection or unbraid/rebraid replacement, never runtime ranking of parallel bigOthers

Lifting and jurisdiction:

full capture by shared concrete answers → unbraid their claim to finality → rebraid shared M; fixed M + current K_t + situation C → binding R_t(C); M may govern universally while generating bounded first-order jurisdictions

Mythological replacement:

map incumbent braid → preserve sound strands → polemically unbraid false bindings → bridge the liminal interval → rebraid the successor → maintain through corrigible apologetics

Revolutionary overshoot:

incumbent resistance × receiver–order mismatch → possible strategic overshoot, sincere absolutization, or cultural selection of categorical variants → displacement → test whether later institutions preserve the achieved jurisdiction without preserving false or destructive excess

Mythological conflict:

informal mythological rivalry → active interference with transmission, authority, membership, or institutional embodiment → mythological conflict → incompatible governing programs → cultural-program conflict

Crowd modes and coupling:

random co-presence → clockwork differentiated coordination → laser synchronization; coupling thermostat = enough common orientation for action + enough independent perception for correction

Braided durability:

story × moral judgment × identity × symbol × role × ritual × institution × consequence → flexible and redundant rope of logic

Actor selection:

systemic slot × dispositional fit × preparation × symbolic credibility × recognition → effective apologetic or polemical actor

Authority scaling:

first-order solidarity → authoritative person embodies the mythology

lifted solidarity → universal meta-order persists through plural, bounded institutions and replaceable human representatives

Force-field reciprocity:

solidarity field selects actor ↔ actor reinforces or modifies solidarity field

Three-component resonance:

common human machinery × heritable dispositional configuration × mythological form → probability of adoption, retention, enactment, and transmission

Action routing:

mythological lens → causal story → Perception → Context → Permission → action

Downhill capture:

resonance → immediate reward → renewable demand → repetition → identity and dependency → rising exit cost

Life-drive formation:

resonance → chosen challenge → sublimation → capability and contribution → maintenance and posterity

Social range:

coupling amplitude + coupling radius → topology of trust, mythology, and cooperation

Cultural interoperability and its breakdown (Babelization):

effective meta-order thickness T_L × meta-order span S_L → effective shared surface Σ_L ; $I \approx k\Sigma_L$; $I < I_{AB}$ → cultural interoperability breakdown (Babelization) → possible society-wide collective-agency failure

Reality coupling:

mythology gives practice meaning → practice produces consequences → consequences correct mythology

Adversarial defence:

repair through apologetics + expose and unbraid through polemics + inoculate against the trick + build a superior attractor + preserve exit + impose conduct-based costs

Covert trusted-opinion-leader threat:

map trusted opinion leader and supporting authority structures → hidden influence or selection → preserve internal carrier identity → translate through incumbent language → nested cascade + visible peer uptake → institutionalize → rebraid one naturalized successor

Final contrast:

A destructive mythology makes gratification consume the future. A constructive mythology makes disciplined transformation create a future.

Analogical Models in Culture Mechanics: A Semantic Inventory

analogical model *noun phrase*

Short definition

An **analogical model in Culture Mechanics** is a deliberately simplified picture that maps selected relations from a familiar source domain—computing, networks, physics, chemistry, engineering, craft, or biology—onto a culture-mechanical construct so that a mechanism, distinction, diagnostic question, or hypothesis becomes easier to perceive and discuss.

All models are wrong, but some are useful.

An analogy is not a claim that its target literally implements its source. It is useful when its declared correspondence performs identifiable explanatory, diagnostic, comparative, mnemonic, or hypothesis-generating work. It becomes

misleading when an unmapped feature is imported as though it were part of the theory, when resemblance is treated as evidence, or when the analogy erases a distinction that the theory needs.

This inventory is authoritative for the **canonical names, mappings, intended inferences, non-inferences, provenance, and relationships** of Culture Mechanics’ analogies. It is not the primary definition of the constructs they illustrate:

- *Culture Mechanics* defines the main cognitive processor, local bigOther, single PCI slot, mythological lens, shared symbolic protocol, and culture-mechanical cycle.
- *Epistemic Agency under Mechanical Solidarity* defines mechanical and organic solidarity, the distributed bigOther, field back-action, multi-mind-self threshold, laser synchronization, and magnetization.
- *Epistemic Constitution of Lifted Mechanical Solidarity* defines the society-wide rules of authority, disagreement, evidence, memory, and correction.
- *Linguistic Tricks: A Semantic Inventory* defines the local linguistic operations by which communication can inform or mislead.
- *Mythology Construction* defines mythological braiding and replacement, apologetics and polemics, assembly-language and SDK pictures, social coupling, and the coupling thermostat.

The inventory supplies a panoramic comparison. Each primary document retains enough of its local analogy to remain independently intelligible.

It also contains clearly labelled **cross-theory mapping panels** where a neighbouring theory clarifies relations among the models. Those panels apply the same mapping and non-inference discipline, but they do not reclassify the external theory as an analogy or make resemblance into validation.

1. The model-usefulness yardstick

Friedemann Schulz von Thun’s *Four-Sides Model*, also called the *Communication Square* or *Four-Ears Model*, is the governing benchmark. Its practical usefulness does not depend upon a claim that a brain literally contains four ears, channels, processors, or sides. It helps people notice several recurrent aspects of one utterance and several routes to misunderstanding.

Culture-mechanical analogies receive the same treatment:

1. State the picture vividly.
2. Name the target and map only the features doing explanatory work.
3. State the useful inference.
4. Deny the most tempting false inference.
5. Separate a theory hypothesis from evidence for that hypothesis.
6. Identify related models without turning resemblance into identity.
7. Keep the originating formulation recognizable before adding qualifications.

The inventory uses three inclusion levels:

- A **cross-cutting analogy** receives a full entry because it joins several theory documents or carries a major theoretical inference.
- A **local analogy** receives a compact index entry and remains developed in its primary home.
- A **passing metaphor** is not catalogued merely because it is vivid. It must perform theoretical work.

2. Master analogy map

Analogy	Family	Explanatory target	Primary home	Principal use	Principal limit
Main CPU and co-processor	Computing	Functionally non-unitary homo duplex	<i>Culture Mechanics</i>	Separates general cognition from culturally installed evaluation	Not literal neuroanatomy or a generic System 1/System 2 claim

Analogy	Family	Explanatory target	Primary home	Principal use	Principal limit
One PCI slot	Computing	Single-slot exclusivity with package compositionality	<i>Culture Mechanics</i>	Makes full occupancy and replacement under incompatibility vivid	Not a claim that the lens is simple, pure, or materially card-shaped
Shared symbolic protocol	Network	Lacan's big Other as public symbolic coordination	<i>Culture Mechanics</i>	Separates the public protocol from each local implementation	Not a complete definition of Lacan's big Other or a literal network standard
Wireless collar, Wi-Fi, and repeaters	Network	Social coupling, unequal gain, and aggregate amplification	<i>Culture Mechanics</i> and <i>Epistemic Agency under Mechanical Solidarity Mythology Construction</i> and <i>Epistemic Constitution of Lifted Mechanical Solidarity</i>	Distinguishes ordinary transmitters, repeaters, and synchronized crowd gain	Radio range is not social authority, truth, or influence in one scalar
Assembly language, SDK, and operating system	Computing	Cultural formation, reusable operations, and society-wide epistemic meta-order	<i>Epistemic Constitution of Lifted Mechanical Solidarity</i>	Distinguishes installed state, reusable operations, visible outputs, and governing permissions	People are not passive machines; the constitution is not literal software or a state monopoly
Typed reconstruction of "formula"	Relational analysis and computing	A provisional disambiguation of Wegner's unusually broad <i>Formel</i> vocabulary	This inventory	Forces a choice among configuration, structure, model, process, symbol, program, and execution before drawing an inference	The reconstruction is the project author's best guess, not evidence of Wegner's intended ontology or a warrant for the full computing-and-identity stack
Lossy codec and decoder-targeted compression	Computing and communication	Audience-modelled reconstruction from finite messages	<i>Epistemic Agency under Mechanical Solidarity</i> and this inventory	Makes explicit that a communicator selects content against assumptions about the recipient's stored codebook and likely reconstruction	Compression is unavoidable and not inherently deceptive; the recipient is an interpreting person, not a deterministic decoder

Analogy	Family	Explanatory target	Primary home	Principal use	Principal limit
The Quantum Mechanics of Psychology	Physics umbrella	Statistical micro-to-macro cultural mechanics and its observational scale	This inventory and <i>Epistemic Agency under Mechanical Solidarity</i>	Connects difficult-to-observe local processing and human capacities with exceptional macroscopic collective order	Relevant science is not uniquely quantum; no literal shared equations
Weak-field gravity and contemporary witnesses	Physics and historical method	Observability when a collective phenomenon is absent, faint, de-animated, or culturally lost	This inventory and <i>Epistemic Agency under Mechanical Solidarity</i>	Explains calm-period under-detection and why reports from strong-field periods matter	Gravity models detectability, not the ontology of a multi-mind-self; witnesses are situated observers, not calibrated instruments
Sleeping, waking, and collective activation	Organismic state transition	Intermittent collective agency and identity-bearing latency between episodes	This inventory and <i>Epistemic Agency under Mechanical Solidarity</i>	Distinguishes a continuing variable-gain agent, an episodic multi-mind-self, and a latent distributed bigOther	A culturally lost system is not asleep, and a collective lacks one organism anchoring identity across inactivity
Charged particle and field	Physics	Local source plus collective back-action	<i>Epistemic Agency under Mechanical Solidarity</i>	Makes reciprocal causation and emergence visible	No social electromagnetic substance or Maxwell equations
Photon and carrier-independence	Physics	Persistence across changing carriers	<i>Epistemic Agency under Mechanical Solidarity</i>	Distinguishes relative identity from one material bearer	Not disembodiment and not literal photon transmission
Laser synchronization	Physics	Dynamic collective coherence	<i>Epistemic Agency under Mechanical Solidarity</i>	Explains pumped, amplified, phase-like collective discharge	Synchrony is not automatically truth, solidarity, pathology, or agency
Ferromagnetic domains	Physics	Durable alignment, remanence, and boundaries	<i>Epistemic Agency under Mechanical Solidarity</i>	Explains persistence and locally sharp cultural patterning	Not one global quantum-coherent state or proof from regional contrast

Analogy	Family	Explanatory target	Primary home	Principal use	Principal limit
Molecular compounds	Chemistry	Strong binding, constrained independent movement, and possible change in the operative unit	<i>Culture Mechanics</i> and <i>Epistemic Agency under Mechanical Solidarity</i>	Tests when persons become durably integrated constituents of a collective agent or absorptive subject	Not literal chemistry, a universal stage, or proof that members lose agency, responsibility, or phenomenal individuality
Resonance catastrophe (<i>Resonanzkatastrophe</i>)	Physics and nonlinear dynamics	Nonlinear collective amplification producing macroscopic rupture	This inventory	Distinguishes prepared receivers, recurrent mode selection, feedback, rapid amplification, and institutional reorganization from mere crisis or diffusion	No literal oscillator, automatic moral condemnation, historical priority, or excuse for participating agents
Random, clockwork, and laser crowds	Collective dynamics	Modes of collective interaction	<i>Mythology Construction</i>	Contrasts co-presence, differentiated coordination, and synchrony	Ideal types can mix; no single metric captures every task
Durkheim's solidarities and crowd modes	Sociological correspondence	Relations among common moral coherence, differentiated interdependence, and synchronization	<i>Epistemic Agency under Mechanical Solidarity</i>	Relates mechanical solidarity to laser synchrony and organic solidarity to clockwork coordination	Project correspondence, not Durkheim's terminology or an identity of process and cohesion
<i>Pluribus</i> and the Borg	Fictional boundary cases	Total-fusion endpoints of generalized and jurisdictionalized alignment	This inventory and <i>Epistemic Agency under Mechanical Solidarity</i>	Separates absorptive collective architecture from the mythological and ethical program it executes	Literal biological or cybernetic hive minds are not evidence for the proposed social mechanism
Coupling thermostat	Engineering	Calibration of common orientation and independence	<i>Mythology Construction</i>	Frames collective design as task-sensitive regulation	A research programme, not an established social control device
Positive feedback, noise, and rival signals	Physics-to-social translation	Formation of order and protection or suppression of competing inputs	<i>Culture Mechanics</i> and <i>Mythology Construction</i>	Separates random-noise reduction from rival-signal and counter-program suppression	A counter-narrative is not analytically noise merely because an incumbent opposes it

Analogy	Family	Explanatory target	Primary home	Principal use	Principal limit
Mythological braid	Craft	One operative weave made from compatible strands	Mythology Construction	Explains durability, redundancy, unbraiding, and replacement	Not cultural purity, painless replacement, or several operative bigOthers
Tangled cables and spaghetti code	Computing/craft	Uninspectable or incompletely replaced programming	Mythology Construction	Makes transitional contradiction and difficult revision visible	Complexity alone is not pathology or proof of several operative bigOthers
Apologetic maintenance and polemical unbraiding	Craft	Defense, attack, repair, and replacement of an operative braid	Mythology Construction	Links construction and destruction across successor formation	Apologetics is not automatically truthful and polemics is not automatically emancipatory

3. Computing and network models

3.1 Main CPU and cultural co-processor

Status: Project-developed functional analogy

Primary theoretical home: [Culture Mechanics](#), “[Homo duplex: the dual-processing human](#)”

Explanatory target: The distinction between the main cognitive processor and the local bigOther

Computing picture	Culture-mechanical counterpart
General-purpose CPU	Perception, memory, prediction, deliberation, and action planning
Specialized co-processor	Culturally installed affective and social evaluation by the local bigOther
Inputs available to both	Observations, language, memories, bodily states, and anticipated responses
Output to the rest of the system	Salience, attraction, aversion, shame, pride, legitimacy, and felt obligation

Useful inference: A person can reason capably while an inherited evaluative module makes some conclusions feel admirable, shameful, obvious, or unthinkable. Reflective cognition can inspect and retrain this module without thereby proving that social valuation was unreal or optional.

Non-inference: The model does not locate two literal chips in the brain, equate the bigOther with System 1, or claim that culture is absent from general cognition. The distinction is functional and constitutive within this theory.

3.2 The one PCI slot and operative weave

Status: Project-developed architectural analogy

Primary theoretical home: [Culture Mechanics](#), “[The single-slot principle](#)”

Explanatory target: Single-slot exclusivity with package compositionality

One local bigOther occupies one PCI slot and executes one operative mythological lens. The installed lens may braid compatible religious, professional, familial, regional, national, and institutional packages into one complex weave. Those packages are constituents of one runtime relation, not independent governing bigOthers awaiting a higher selector.

Useful inference: Incompatible governing classifications produce rejection, instability, or a replacement problem. A successor must loosen and unbraid the incumbent's load-bearing bindings sufficiently to rebraid one operative successor. Retained words and practices receive their active meaning from that successor weave.

Non-inference: A slot does not imply simplicity, cultural purity, an empty emancipated mind, a second hidden supervisor, or literal computer hardware. First-order and lifted programs both occupy the slot fully.

3.3 Shared symbolic protocol

Status: Culture-mechanical translation of one aspect of Lacan's big Other

Primary theoretical home: *Culture Mechanics*, "Shared symbolic protocol"

Explanatory target: Public intelligibility among local bigOthers

Words, gestures, roles, classifications, rituals, sanctions, and symbols work like an on-the-wire protocol: each participant must locally decode them, yet their shared public form permits reciprocal expectations and common knowledge.

Useful inference: A distributed cultural state can remain coordinated while its local implementations and biological carriers differ. Analysis must distinguish public protocol, local processor, installed program, emergent field, and collective agent.

Non-inference: The protocol is not a disembodied mind, the local bigOther is not identical with Lacan's public big Other, and successful decoding does not imply agreement or obedience.

3.4 Wireless collar, Wi-Fi, and repeaters

Status: Project-developed network family

Primary theoretical homes: *Culture Mechanics*, "The wireless superpower" and *Epistemic Agency under Mechanical Solidarity*, "Repeaters and crowds"

Explanatory target: Reception, transmission, unequal gain, and aggregate amplification

The wireless collar adds a network interface to the local evaluator. Every local bigOther receives and transmits. A repeater is a node with greater reach, credibility, frequency, connectivity, or institutional amplification. A crowd of ordinary transmitters can nevertheless produce a signal stronger than one prestigious speaker through applause, repetition, silence, ridicule, or visible unanimity.

Useful inference: Unequal gain and aggregate synchronization are different mechanisms. A leader, trusted opinion figure, institution, peer cluster, ritual, or decentralized network can each amplify culture through a different topology.

Non-inference: Radio strength does not combine expertise, trust, truth, authority, brokerage, and correction into one quantity. Nor does the picture make people passive receivers.

3.5 Assembly language, SDK, and operating system

Status: Project-developed software family

Primary theoretical homes: *Mythology Construction*, "Semantic anatomy" and *Epistemic Constitution of Lifted Mechanical Solidarity*, "Why the concept is an operating system"

Explanatory target: Relations among cultural operations, installed rules, and society-wide epistemic permissions

- **Mythology as assembly language** pictures stories, symbols, identities, roles, permissions, and rituals as culturally executable operations close to the sentiment classifier.
- The **SDK** exposes reusable construction and audit operations without dictating one finished mythology.
- The **epistemic operating system** governs society-wide permissions concerning authority, evidence, disagreement, memory, correction, and jurisdiction while many bounded persons and institutions act beneath it.

Useful inference: A visible proposition or procedure cannot be understood fully without the installed state from which it receives authority and affective meaning. A universal lifted meta-order can govern the generation and correction of first-order outputs without prescribing every output.

Non-inference: People are not passive execution engines; an epistemic constitution is not software or necessarily a state institution; and a universal meta-order does not eliminate bounded offices, plural inquiry, interpretation, refusal, or exit.

3.6 Typed reconstruction of Wegner’s “formula”

Status: Project author’s explicitly tentative interpretive hypothesis

Primary home: This inventory

Source boundary: Dushan Wegner’s *Relevante Strukturen* (2019; ISBN 9783739405636)

Explanatory target: The ambiguity created by Wegner’s use of *Formel* for physical things, relations, ideas, actions, ethical arrangements, and social institutions

Wegner explicitly presents *Formel* as practical shorthand for attending to how something is composed, how its parts relate, and how it relates to its environment. He also applies the word much more broadly than mathematical, computer-science, or ordinary-language usage permits. The project author proposed the following as a **best-guess reconstruction of what Wegner might mean**. It is preserved because it can make the source more intelligible, not because the book establishes that this was Wegner’s intended conceptual stack:

Wegner’s broad use of <i>Formel</i>	Possible typed reconstruction
A mountain, table, organism, or other physically composed thing	Physical configuration or system
Parts embedded in or related to other parts	Relational structure
An idea or account held in a person’s head	Representation, schema, or model
An action or temporally extended arrangement	Process
A word standing for a larger learned complex	Symbol, pointer, or compressed representation
A rule mapping inputs or situations to outputs	Mapping, function, or program—only where a rule is actually specified
A rule causally producing state transitions	Execution—only where an executor, transition semantics, and counterfactual operation can be identified
A continuing bearer across changing states	Entity or identity-bearing process—only where causal-historical continuity is independently at issue

The broader computing discussion that motivated this reconstruction can be kept typed as a diagnostic checklist:

physical substrate $\neq$ physical state $\neq$ encoded data
encoded data $\neq$ code under execution semantics $\neq$ execution
execution $\neq$ Beseelung
Beseelung $\neq$ synchronization
synchronization $\neq$ distributed identity
distributed identity $\neq$ agency

The inequalities mark distinctions, not a necessary developmental order. *Beseelung*, synchronization, identity, and agency remain separately testable dimensions and can combine in more than one sequence. In particular, a physical configuration is not automatically data, data is not automatically code, code is not execution, execution is not *Beseelung*, synchronization is not identity, and identity is not agency.

Useful inference: Whenever *Formel* appears in a proposed Culture Mechanics extension, replace it with the narrowest typed term that performs the actual explanatory work. This may salvage Wegner’s relational attention without importing one undifferentiated ontology.

Non-inference: Nothing in this reconstruction shows that Wegner meant a computer program, that a mountain intrinsically executes code, that every relevant structure possesses identity or agency, or that the full substrate–identity stack is Wegner’s contribution. It also does not establish the truth of the identity criteria suggested by that stack. Those are project-level interpretive and theoretical questions requiring their own arguments and tests.

3.7 Lossy codec and decoder-targeted compression

Status: Project-developed communication analogy prompted by Wegner’s *Komprimierung* and *Dekomprimierung*

Primary theoretical home: *Epistemic Agency under Mechanical Solidarity*, “Audience-modelled reconstruction and decompression”

Explanatory target: How a finite message can rely on an anticipated recipient’s stored knowledge and installed mythological lens to produce a much richer factual, causal, moral, and authorization model

Codec picture	Culture-mechanical counterpart
Larger source model	The communicator's represented event, causal account, and intended moral or practical result
Encoder tuned to a target format	Selection of facts, omissions, sequence, symbols, presuppositions, and cues against a model of the recipient
Compressed message	The finite utterance, image, slogan, report, or narrative actually transmitted
Decoder and shared codebook	An intentionally distributed analogy: ordinary cognition reconstructs from language, knowledge, trust relations, and context; the installed mythological lens supplies culturally learned mappings; the local bigOther executes their evaluative classification
Reconstructed file	The factual, causal, moral, and authorization model the recipient constructs
Corruption or adversarial optimization	A materially misleading predictable reconstruction produced while the surface wording remains defensible

Useful inference: Analysis should compare the literal message with the complete model a competent recipient was expected and actually found to reconstruct. The same surface message can decompress differently in audiences with different installed codebooks; conversely, audience-specific messages can converge on the same targeted appraisal or grant of power. A changed reconstruction can result from different knowledge or context without reprogramming; durable reversal of the culturally learned mapping from a represented practice to honour, shame, attraction, aversion, or obligation is instead evidence to investigate as possible mythological-lens reprogramming.

Non-inference: Human reconstruction is probabilistic, reflexive, and contestable rather than deterministic. Every finite utterance omits information; compression, audience adaptation, metaphor, summarization, and expertise are not therefore dishonest. An adversarial diagnosis requires evidence that the induced model is materially misleading and was predictably or systematically produced, with conscious intention assessed separately. The analogy does not add a “decoder” as a third processor beside the main CPU and local bigOther, turn prestige into a sovereign evaluative system, or make *Beseelung* an act of decoding.

4. Physics and collective-dynamics models

4.1 The Quantum Mechanics of Psychology

Status: Originating umbrella analogy of Culture Mechanics

Primary theoretical homes: This inventory and [Epistemic Agency under Mechanical Solidarity, “Observability, cultural forgetting, and contemporary witnesses”](#)

Explanatory target: Statistical micro-to-macro explanation of collective cultural order, the scale at which it becomes visible, and the historical problem of observing a culturally intermittent or lost capacity

Culture Mechanics is the Quantum Mechanics of Psychology.

“The Quantum Mechanics of Psychology” does not mean that psychology literally operates according to quantum equations. It identifies an explanatory scale and an observational problem. The “laws of motion” sought by Culture Mechanics are population-level tendencies, distributions, thresholds, and feedback relations. They do not determine every individual case.

The stronger originating hypothesis is historical:

A society can lose the cultural knowledge, practices, narratives, rituals, and institutions needed to generate strongly synchronized multi-mind-selves.

The underlying human capacity remains, just as the biological capacity for language remains even when a particular language disappears. But the relevant cultural technology may have been forgotten. Some rules may survive as fossils—still followed through habit, convenience, or enforcement, but no longer spiritually charged. They coordinate people without *Beseelung*.

The originating autobiographical account sharpens the claim:

For the first nearly fifty years of my life, I was not aware of multi-mind-selves in their strongest expressions. I do not believe that I merely overlooked an active phenomenon. Its strongest forms were not there to be seen. I began to notice them when a sequence of public manias made their effects hard to miss.

This is an observation and an originating historical interpretation, not by itself population-level evidence that the cultural machinery had disappeared. It is nevertheless theoretically important because it rejects the assumption that every calm period is merely the dormant phase of an intact collective being. Lionel Shriver offers a neighboring first-person diagnosis: in “How to spot the next mania”, she says that since roughly 2012 she has been disturbed by renewed susceptibility to rapidly spreading “collective derangement” and identifies a succession of public manias. Her novel *Mania* (2024) turns that concern into fiction. Her testimony is relevant to the change in visibility; it does not independently establish the culture-mechanical explanation of those episodes.

The analogies form a nested set. Each answers a different question:

Analogy	What it explains
Classical mechanics	Ordinary individual and social behaviour can usually be explained adequately with conventional psychology.
Quantum mechanics	Culture Mechanics concerns a deeper, less directly visible substrate whose effects ordinarily remain local, subconscious, or difficult to distinguish from ordinary psychology.
Magnetism and lasers	Under special conditions, many local units align, allowing normally hidden mechanics or capacities to produce a conspicuous macroscopic effect.
Gravity in a weak-field region	When the macroscopic effect is absent or extremely weak, it may be practically impossible to notice and study without exceptionally sensitive instruments.
Contemporary witnesses	People present during a strong-field episode preserve observations that later calm periods can no longer supply directly.

For most everyday life, “Newtonian psychology” is good enough. People have preferences, make decisions, obey rules, cooperate, compete, form relationships, and respond to incentives. We do not need a theory of multi-mind-selves to explain someone stopping at a red traffic light.

Ordinary individual psychology may cease to be sufficient, however, when large numbers of people suddenly align in attention, emotion, language, moral judgment, and action. In those episodes, something normally hidden “shines through” into the macroscopic world. Public manias are to Culture Mechanics what ferromagnetism and lasers are to quantum mechanics: unusually visible manifestations of processes or capacities that are otherwise difficult to observe directly.

The **laser analogy** explains the active mechanism:

- cultural preparation through mythologies
- + emotionally charged triggering event
- + reciprocal observation and reinforcement
- + suppression or exclusion of counter-signals
- coherent collective passion and action

The **gravity analogy** explains why the mechanism can remain unknown. If no strongly synchronizing multi-mind-self is present, there may be no sufficiently strong causal signature to attract attention. Researchers observing only calm-period individuals may understandably conclude that ordinary individual psychology is all that exists—just as someone confined to a weak-field region might fail to appreciate what gravity does near a massive body.

The forgotten-culture possibility makes this observational problem stronger. During a calm period, at least three conditions can produce a weak present-day signature:

Calm-period condition	What remains	What a later trigger can do
Dormant	The old synchronization machinery, living mythology, and practices remain intact but inactive	A suitable event can reactivate the familiar collective state
De-animated	Rules, words, symbols, and routines remain, but their sacred and affective connections have deteriorated	A trigger may produce compliance or mild sentiment without strong synchronization
Culturally lost	Only fragments or no viable transmission and activation system remain	What appears to be revival may require construction of a successor synchronization system from inherited fragments

From the calm period alone, these possibilities may be difficult to distinguish. A dead rule does not reveal how the same words or symbols once felt when they were sacred, identity-bearing, and capable of mobilizing sacrifice. Later observers can possess the texts while lacking access to their former animating force. “Do not cross when the pedestrian light is red” can still coordinate conduct effectively; *dead* here means affectively or spiritually dead, not functionally useless.

This is why **Zeitzeugen**—contemporary witnesses—matter. Julien Benda, Dietrich Bonhoeffer, Lionel Shriver, and the originating author occupy different positions within strong-field periods:

Witness	What the testimony preserves for this theory
Julien Benda	In <i>La trahison des clercs</i> (1927), scattered political passions become more coherent, continuous, morally authorized, sacred, and intellectually systematized; Benda also records the role of intellectuals and communication in that intensification.
Dietrich Bonhoeffer	In “ <i>Von der Dummheit</i> ” (1943), overwhelming political or religious power deprives persons of inner independence so that slogans and formulas displace their own judgment.
Lionel Shriver	Her 2024 account records noticing a renewed sequence of public manias—collective demonstrations of what the originating framework calls our capacity to “lose our minds.”
Originating author	The autobiographical contrast is between a long period in which these beings did not appear macroscopically present and a later period in which their effects became difficult to miss.

Benda is especially useful for the **formation and intensification** of a field; Bonhoeffer for the **effect of an overwhelming field upon the person**. In the gravitational picture, Benda describes the massive body forming and the surrounding field becoming stronger. Bonhoeffer describes what can happen to a person already caught deep inside that field.

These testimonies do not by themselves prove the proposed mechanics. They preserve observations from conditions in which the phenomenon was available to observation. Their value lies partly in recording the qualitative difference between an ordinary disagreement and a society that suddenly seems *beseelt* by a shared passion. Something is better than nothing: when the primary effect is no longer available, situated reports by people who were present and tried to capture it in words are the next-best evidence of its experienced form. Their bias must be examined, but their situatedness is also what gave them access.

The merged unifying thesis is:

Culture Mechanics is difficult to discover because its underlying human capacities and local processes are usually inconspicuous, and cultures may even lose the practices that once made them macroscopically visible. A tightly synchronized multi-mind-self is therefore not always available for direct study.

During a calm period, its mythology and synchronization practices may remain dormant and capable of reactivation. But the culture may also have forgotten how to produce the state: its living mythologies may have deteriorated into affectively dead rules, detached symbols, and habitual procedures, or a viable transmission system may have disappeared. From the weak present-day signature alone, we may be unable to distinguish dormancy from cultural decay or extinction. Only under exceptional conditions do these capacities break through into macroscopic life as collective effervescence, public mania, intensified mechanical solidarity, or a tightly synchronized multi-mind-self. Contemporary witnesses are therefore important because they observed the rules, symbols, and mythologies while these were still spiritually charged and collectively active. If we study humanity only during calm periods, we may mistake the temporary or historical absence of these beings for evidence that they cannot exist.

The phrase is retained because it memorably gathers several linked pictures:

- microscopic sources and macroscopic order;
- probabilistic or statistical prediction;
- coupling and positive feedback;
- phase-like transitions and order parameters;
- laser-like dynamic coherence;
- ferromagnetic persistence, domains, and boundaries;
- and back-action from the organized whole upon local units.

The panoramic correspondence is easier to see in one place. This table joins the models; the detailed entries below retain their distinct mechanisms and limits.

Physical picture	Culture-mechanical counterpart	Explanatory work
Pumped laser medium	People prepared or <i>beseelt</i> by mythology	Readiness for a visible collective episode can be formed before its trigger
Stimulated emission and feedback	Reciprocal signalling, repetition, imitation, ritual, institutions, and platform feedback	Local responses can amplify further responses
Mode selection	Master signifiers and authorized classifications select a common interpretation	A compressed symbolic operator can orient alignment without containing the whole program
Optical coherence	Alignment of attention, affect, judgment, rhythm, or action	Dynamic order becomes macroscopically visible
Concentrated laser output	Public mania, ritual effervescence, collective judgment, or coordinated discharge	Prepared and coupled participants can act with unusual concentration and force
Local magnetic moment	Evaluative orientation executed by one local bigOther	Durable order has locally implemented sources
Magnetization	Mechanical-solidarity alignment across a population	A common orientation can persist beyond one synchronized episode
Magnetic domains and domain walls	Locally coherent cultures separated by regional, institutional, or ideological boundaries	Alignment may be spatially uneven and boundaries comparatively sharp
Order parameter	Operational macroscopic measure of an explicitly defined kind of alignment	Collective order can be compared without requiring identical individuals
Field formation and back-action	Local bigOthers produce an emergent symbolic-affective field that alters what participants feel, expect, trust, and consider possible	The collective pattern is both locally produced and causally consequential for its producers

Scientifically, this family spans more than quantum mechanics. Neighbor alignment, noise, order parameters, and collective-motion transitions also belong to classical statistical mechanics and nonlinear dynamics, as the [Vicsek model of self-driven particles](#) illustrates. Condensed-matter physics supplies the magnetic-domain picture. The rhetorical umbrella is therefore broader than one physical theory.

Useful inference: Do not demand exceptionless prediction of one person before testing a collective mechanism. Look for observable alignment, threshold behavior, persistence, boundaries, common-mode error, and field back-action at the relevant population level.

Non-inference: Quantum mechanics is not “only statistical”: it assigns probabilities to individual measurements while state evolution is represented unitarily in the standard formalism; see MIT’s [Quantum Theory I lecture notes](#). Culture Mechanics does not propose a social wavefunction, shared physical equations, quantum consciousness, or literal quantum coherence among people. Likewise, gravity is an analogy for **detectability**, not for the ontology of a multi-mind-self: a social synchronization system may genuinely have disappeared, whereas gravity has merely become weak with distance. An orbiting spacecraft is in free fall rather than outside gravity; [NASA’s account of orbital mechanics](#) therefore supports the more precise picture of a spacecraft in a region far from massive bodies. The loss of one synchronization technology also does not empty the local bigOther’s single PCI slot; another operative lens still occupies it.

Sleeping, waking, and collective activation The sleep–waking picture adds a temporal relation to the weak-field analogy. A distributed cultural system may preserve identity-bearing memory and activation procedures while falling below its high-gain or collective-agent state. Ritual, crisis, assembly, or common attention can then appear to “wake” it:

latent distributed bigOther
+ identity-bearing memory, roles, places, calendars, and practices
+ renewed common attention, coupling, and reciprocal feedback
→ possible episodic multi-mind-self

Organismic picture	Culture-mechanical mapping	Boundary
Waking organism	A continuing or episodically activated collective presently perceives, judges, intends, and acts	Observable synchrony alone does not establish collective agency.
Sleeping organism	Viable distributed memory and reactivation machinery remain while present integration or gain is low	The analogy is strongest for latency, not every calm period.
Changing arousal	A continuing collective agent moves between clockwork baseline and laser-like peak episodes	Low synchrony need not mean the collective agent has ceased to exist.
Death rather than sleep	The former cultural technology, identity path, or activation system has been lost	A later revival may construct a successor instead of reawakening the same self.

A human organism provides one body, nervous system, and autobiographical path across sleep. A distributed collective has no equally simple anchor. Its claimed continuity depends upon relations among records, property, offices, participants, rituals, artifacts, places, and recognized succession. The analogy therefore raises rather than answers the identity question: how much of that organization must persist for two activated episodes to belong to the same collective self?

Useful inference: Do not require continuous laser synchronization for every multi-mind-self. Test whether low-gain organization preserves the memory, jurisdiction, procedures, and reactivation path needed for continuing or episodic agency.

Non-inference: Calmness does not prove sleep. The collective may remain a low-gain agent, may be merely latent below the agent threshold, may survive only as de-animated remnants, or may have disappeared. The analogy also does not prove that a reactivated crowd has one phenomenal consciousness.

4.2 Charged particles and field back-action

Status: Project-developed physical analogy
Primary theoretical home: [Epistemic Agency under Mechanical Solidarity](#), “Field formation and back-action”
Explanatory target: Reciprocal causation between local bigOthers and an emergent symbolic-affective field

Electromagnetic picture	Culture-mechanical counterpart
Charged particle as field source	Local classification encoded in speech, gesture, symbol, role, practice, or sanction
Field generated by many sources	Patterned expectations, institutions, reputations, apparent consensus, and mechanical-solidarity coherence
Force back upon a charge	Changed salience, feeling, legitimacy, trust, perceived possibility, and expected cost inside each participant

Useful inference: A collective field is implemented through persons and artifacts yet is not adequately reconstructed by treating each person's psychology as independently formed. Relations, public expectations, common knowledge, institutional memory, and sanctions alter the next round of local processing.

Non-inference: The theory posits no electromagnetic substance, Maxwellian equations, inverse-square social law, or field detached from carriers.

4.3 Photons and relative carrier-independence

Status: Project-developed physical analogy

Primary theoretical home: *Epistemic Agency under Mechanical Solidarity*, "Field formation and back-action"

Explanatory target: Persistence of organized social meaning while carriers change

A law, office, ritual, master signifier, or institutional expectation can remain recognizable while speakers, officeholders, documents, buildings, and biological participants are replaced.

Useful inference: Track the organization that is reproduced across carriers, not only the current bearer. Collective memory and office can have causal continuity without one immortal individual.

Non-inference: Relative carrier-independence is not carrierlessness, disembodiment, or a claim that meanings propagate as literal photons.

4.4 Laser synchronization and public mania

Status: Project-developed analogy preserving an originating formulation

Primary theoretical home: *Epistemic Agency under Mechanical Solidarity*, "Laser synchronization, magnetization, and cultural domains"

Explanatory target: Driven, amplified, temporally concentrated collective coherence

Laser picture	Culture-mechanical counterpart
Pumped or excited medium	People prepared or <i>beseelt</i> by an operative mythology
Energy input	Fear, hope, anger, enthusiasm, moral concern, humiliation, or expectation
Coupling and repeated stimulation	Education, media, ritual, repetition, institutions, reciprocal observation, and platform feedback
Mode selection	Master signifiers and authoritative classifications that select a common interpretation
Coherence	Alignment of attention, affect, rhythm, interpretation, judgment, or action
Concentrated output	Public mania, ritual effervescence, collective judgment, enforcement, or coordinated action

The originating description says that people can be:

charged with the mythologies of a multi-mind-self

and then discharge as a crowd moving with common direction and rhythm. The phrase retains the project's language of *Beseelung* or being "ensouled" by an operative mythology.

Useful inference: Collective discharge requires preparation as well as a trigger. Stories, institutions, rituals, repetitions, and shared tokens can store or maintain readiness that is not obvious in ordinary isolated behavior. A master signifier can function as a mode selector without itself containing the whole program.

Non-inference: A synchronized crowd does not by synchrony alone prove mechanical solidarity, truth, intelligence, pathology, full capture, or a multi-mind-self. The multi-mind-self requires continuing integration sufficient for collective perception, memory, judgment, intention, ownership, and action. Public manias may be deliberately engineered, accidentally amplified, or endogenously self-organized. The existence of [astrophysical lasers](#) also defeats the originating claim that lasers are exclusively artificial.

Physical lasing is an open, pumped, dissipative process. Experiments can describe symmetry breaking and a stochastic order parameter in laser regimes; see [Ohadi et al., “Spontaneous Symmetry Breaking in a Polariton and Photon Laser”](#). That structural affinity does not put social alignment, lasers, and ferromagnets in one universality class.

4.5 Magnetization, remanence, domains, and domain walls

Status: User- and project-developed analogy
Primary theoretical home: [Epistemic Agency under Mechanical Solidarity](#), “[Laser synchronization, magnetization, and cultural domains](#)”
Explanatory target: Durable cultural orientation, persistence, and spatial or institutional boundaries

Ferromagnetic picture	Culture-mechanical counterpart
Local magnetic moment	Evaluative orientation executed by one local bigOther
Exchange-supported local order	Dense reciprocal reinforcement among neighboring participants
Magnetization	Durable mechanical-solidarity alignment across a population
Remanence	Persistence after a strong forming signal, ritual, leader, or institution weakens
Magnetic domain	Locally coherent culture with a characteristic orientation
Domain wall	A comparatively sharp boundary between neighboring cultural patterns

Ferromagnetism depends upon quantum exchange, but ordinary iron divides into domains and should not be pictured as every component occupying one global quantum-coherent state. NIST’s [review of metallic ferromagnetism](#) links spin-polarized electronic structure to exchange and maps domain structure; [Feynman’s discussion of magnetic materials](#) explains domain formation and wall motion. Remanence names retained magnetization after the forming field is removed; the social mapping is proposed here.

The originating Bavaria–Swabia observation makes the domain-wall hypothesis vivid. House forms, flower decoration, visible care of shared space, standards of cleanliness, and practices such as *Kehrwoche* can change markedly across a regional boundary even though individuals differ on both sides.

Useful inference: An active laser moment is not required for a culture to remain aligned. Local reinforcement and institutional memory can preserve a pattern after the forming episode passes. Neighboring populations can form stable domains, and boundary change may occur unevenly rather than through simultaneous individual conversion.

Non-inference: A visible regional contrast does not prove the mechanism, classify every resident, make a boundary immutable, or attribute the pattern to geography alone. Migration, bilingual participation, institutions, media, and dissent can cross and reorganize domains. **Coercivity, nucleation, domain expansion, and competing magnetization** remain candidate extensions, not canonical culture-mechanical mechanisms.

Durkheim did not propose ferromagnetic domains. William James supplied a closer psychological precursor when he described abstract realities as “polarizing and magnetizing” human beings in [The Varieties of Religious Experience](#). Gustave Le Bon used “magnetic influence” and hypnotic fascination in [Psychologie des foules \(1895; English translation\)](#). The detailed moments/domains/domain-wall/remanence mapping belongs to this project.

4.6 Random, clockwork, and laser crowds

Status: Project-developed ideal-type analogy

Primary theoretical home: *Mythology Construction*, “Coordination, synchronization, and the coupling thermostat”

Explanatory target: Different modes of collective interaction

The word **crowd** acknowledges Gustave Le Bon’s *Psychologie des foules* while rejecting the claim that every crowd shares one ontology or loses all agency.

Random crowd Saturday shoppers moving through a plaza share space without a common task or purpose. They may affect one another, but they remain weakly coupled for the variable being studied. “Random” does not mean strict statistical independence in every respect.

Clockwork crowd The clockwork family contains two mechanisms that should not be collapsed:

- In **routed clockwork**, a pit crew coordinates differentiated, functionally interdependent roles toward one result. One participant’s output becomes another’s input or condition of action. The crew requires interfaces, handoffs, and controlled communication; it does not thrive through minimal cross-talk in every respect.
- In **aggregative clockwork**, forecasters can produce independent estimates that an external mechanism averages. Statistical variety and minimal cross-talk can allow approximately unbiased errors to cancel, even though functional coupling among the contributors is low. The whole aggregation system is clockwork-like; the forecasters alone need not form a strongly coupled crowd.

A stock-prediction tournament is therefore a boundary case rather than the leading clockwork example. The pit crew is the clean model of differentiated functional interdependence; the prediction tournament is the clean model of independent statistical aggregation.

Laser crowd A chanting stadium, military drill squad, ritual assembly, or flock-like turn aligns participants not only around what matters but around when and how to respond. Rapid reciprocal signaling can make the crowd act with the force and speed of one body.

The governing picture is deliberately simple:

Coordination and synchronization are the two ends of a single continuum of interaction strength.

This is an ideal-typical continuum, not a claim that every real group occupies only one empirical dimension. Here **interaction strength** primarily means pressure toward shared timing, attention, affect, interpretation, judgment, and response. Functionally interdependent specialists may remain clockwork-like even when their dependence is substantial. An orchestra or pit crew can also become highly synchronized. Real groups move between and combine modes as tasks change.

The governing continuum remains primary. The following diagnostic table merely unpacks features that a concrete study may need to measure separately:

Crowd mode	Phase-like synchrony	Functional interdependence	Characteristic strength
Random	Low for the variable studied	Low for a shared task	Heterogeneity and mere co-presence
Clockwork	Usually low, except where handoffs require timing	High in routed clockwork; potentially low among contributors in externally aggregated clockwork	Division of labour, independent information, routed contribution, and error correction
Laser	High in the selected timing, attention, affective, interpretive, or action variable	Often high around a common mode, although synchrony alone does not prove task dependence	Speed, force, courage, rhythm, and visible unity

Useful inference: Clockwork systems gain intelligence through differentiation. Routed clockwork exploits functional interdependence and handoffs; aggregative clockwork exploits independent information and error-cancelling variety.

Laser crowds gain speed, force, courage, common attention, and coherent action. The best mode depends on the task.

Non-inference: Clockwork is not automatically wise and laser is not automatically foolish. Diversity can contain correlated error; synchrony can be necessary in emergency action, music, ritual, and skilled teamwork.

Differentiated unity, bounded synchrony, and fusion pressure The preferred term is **clockwork coordination**, not *clockwork synchronization*. Clockwork describes differentiated contribution routed through roles, interfaces, handoffs, aggregation rules, and a shared meta-order. It therefore has an affinity with **differentiated unity**, but does not define it: clockwork is an organizational picture, while differentiated unity states that persons and subordinate parts retain distinct functions, judgments, relationships, and legitimate jurisdictions within a real shared *we*.

The laser picture describes alignment in a selected variable. **Bounded laser synchronization** is limited by task, time, variable, or jurisdiction and can be fully compatible with person-preserving differentiated unity. **Generalized and jurisdictionalized laser synchronization** carries the selected alignment across domains, prolongs it beyond the task, makes it compulsory, and reclassifies independent judgment as noise, alienation, impurity, or betrayal. It can therefore produce **fusion pressure** and contribute to **subjecthood absorption (fusion)**. Synchrony alone does not establish either.

Dynamic picture	Person–collective affinity	Boundary
Clockwork coordination	Differentiated unity	A clockwork institution can still be oppressive or deny legitimate personal standing
Bounded laser synchronization	Differentiated unity with temporary selected alignment	High τ for one variable does not imply fusion across the person or society
Generalized and jurisdictionalized laser synchronization	Fusion pressure and possible subjecthood absorption	The pathway must be shown through expanding jurisdiction, compulsory classification, and weakened correction, refusal, or exit

This mapping does not introduce a second dimension into the simple governing crowd-mode picture. It states a typed relationship between that dynamic picture and a separate person–collective axis defined in [Culture Mechanics](#).

Fictional limit case: *Pluribus* **Status:** Fictional illustration and boundary case, not empirical evidence

Vince Gilligan’s Apple TV series [Pluribus \(2025\)](#) depicts an extraterrestrial “Joining” that turns nearly all humanity into one peaceful and permanently happy hive mind. The joined bodies share goals, values, knowledge, affect, and action, while the collective seeks to incorporate the few immune persons who retain individual minds; [WIRED’s account of the fictional mechanism](#) makes that premise explicit. Gilligan describes the thematic problem as the difference between individuality and conformity and asks whether a civilization can preserve disagreement without becoming hostile camps; see his [ABC News interview](#).

<i>Pluribus</i> element	Culture-mechanical reading
Nearly planet-wide Joining	Coupling radius and demanded alignment become effectively global
Shared goals, values, knowledge, feeling, and action	Synchronization is generalized across domains rather than bounded to a task or variable
The collective’s effort to incorporate immune persons	Alignment becomes jurisdictionalized: refusal and continued independent existence are not accepted as final boundaries
One consciousness acting through many bodies	Subjecthood absorption reaches the fictional total-fusion limit; this is more than laser synchronization among distinct persons
Peace, happiness, mutual service, and efficient common action	High cultural interoperability and collective capacity do not by themselves preserve differentiated persons

Useful inference: The series makes the transition vivid: an initially attractive promise of agreement, care, and frictionless common action can become fusion pressure when alignment expands across the whole person and the collective refuses to leave outliers outside its jurisdiction. It also cleanly separates the two axes: the joined world has extremely high interoperability and extremely high subjecthood absorption.

Non-inference: *Pluribus* does not model the proposed social mechanism. Its Joining is an alien biological and science-fictional device producing literal shared consciousness. A laser crowd retains distinct people whose selected states are aligned; the series deliberately removes that boundary. It is therefore a limit-case thought experiment about what generalized and jurisdictionalized synchronization points toward, not evidence for multi-mind-selves, fusion pressure, or any empirical effect of mythology and media.

Fictional limit case: the Borg **Status:** Fictional illustration and boundary case, not empirical evidence

The Borg in *Star Trek* supply a more openly hostile total-fusion limit case. StarTrek.com describes the Collective as an amalgamation of subjugated races whose members lack free will and repeat “You will be assimilated” and “Resistance is futile”; see “[Star Trek 101: The Borg](#)”. Its members are interconnected in a hive mind, and participation is not voluntary. The Collective forcibly assimilates minds, bodies, and technology in pursuit of efficiency, adaptation, dominance, and perfection; official accounts emphasize both its [forced assimilation at the expense of individuality and the freedom to disconnect](#) and its practice of adding others’ biological and technological distinctiveness to the Collective while stripping away their independent selves; see “[Everything You Need to Know About the Borg Queen](#)”.

Borg element	Culture-mechanical reading
Drones interconnected in one collective consciousness	Subjecthood absorption reaches the fictional total-fusion limit; distinct bodies remain, but no ordinary plurality of judging subjects
Forced assimilation of persons, minds, bodies, and technology “Resistance is futile”	Recruitment becomes compulsory physical overwriting under comprehensive and expansionary jurisdiction Refusal and exit have no legitimate standing; dissent is treated as a temporary technical obstacle to be removed
Biological and technological distinctiveness is added to the Collective	Difference is retained as collective capability while the independent standing and ownership of its former bearer are abolished
Perfection, efficiency, adaptation, and dominance	The absorptive architecture executes a different operative evaluative program from <i>Pluribus</i> ’ peace, happiness, care, and mutual service

The paired comparison separates architecture from program content:

Dimension	<i>Pluribus</i>	The Borg
Collective architecture	One literal consciousness acting through nearly all human bodies	One literal collective consciousness acting through assimilated drones
Normative promise	Peace, happiness, care, and frictionless common action	Perfection, efficiency, adaptation, and collective strength
Posture toward outsiders	Benevolent-looking or paternalistic incorporation	Openly coercive and militarized assimilation
Treatment of difference	Persistent outliers are to be harmonized with the whole	Useful distinctiveness is appropriated while its independent bearer is extinguished
Treatment of refusal	Continued independent existence is not accepted as a final boundary	"Resistance is futile" declares refusal ineffectual and illegitimate

Useful inference: Two collectives can occupy approximately the same absorptive structural endpoint while executing sharply different mythological and ethical programs. In the theory's more precise vocabulary, the program is not itself a *bigOther*. An operative mythological and evaluative lens is installed in and executed by each captured participant's local *bigOther*; networked integration can then support a distributed *bigOther* and multi-mind-self. *Pluribus* and the Borg are separate fictional systems, not simultaneous *bigOthers* within one person. "Resistance is futile" is an especially compact picture of complete jurisdictionalization: another person's refusal is no longer treated as a judgment with standing, only as a condition to overcome. The Borg also distinguish the preservation of useful variation from differentiated unity. A collective can appropriate information, skills, and biological capacities while abolishing the persons and jurisdictions that previously owned and judged their use.

Non-inference: Borg assimilation operates through fictional cybernetic implants, a literal communications network, physical force, and, in many stories, a Borg Queen who functions as a central nexus. It is therefore neither a model of the proposed culture-mechanical mechanism nor a clean example of decentralized emergence. The analogy does not show that synchronized human groups become literal hive minds, that fusion architecture determines one necessary ethical program, or that every demand for alignment is Borg-like. Like *Pluribus*, it dramatizes an imagined endpoint beyond laser synchronization among differentiated persons.

4.7 Measurement note: phase alignment and task error

The useful specialist dashboard is:

synchrony S + functional coupling F + task error E

Quantity	Question	Valid operationalization requires	It does not measure
Synchrony S ; a Kuramoto-style τ where appropriate	How closely are participants aligned in phase, direction, timing, attention, affect, interpretation, or action?	A defined phase, direction, or other alignment variable and observation window	Role dependence, truth, wisdom, or task accuracy
Functional coupling F	How much do contributions depend upon, constrain, hand off to, or change one another in producing a result?	A defined task or process and a dependency, information-flow, intervention, or removal test	Shared phase, emotional unity, or correctness
Task error E ; MSE where appropriate	How far is the output from a specified target?	A target, unit of error, aggregation rule, and task population	Synchrony, functional coupling, or collective agency

These are diagnostic quantities, not three new axes in the theory's governing reader model.

Synchrony S: the r gauge For N phase variables, the Kuramoto-style order parameter is the magnitude of the average unit phase vector:

$$re^{i\psi} = \frac{1}{N} \sum_{j=1}^N e^{i\theta_j}, \quad 0 \leq r \leq 1.$$

Think of r as a **synchrony gauge**. When r approaches one, the measured phases are concentrated around one common phase and the crowd is increasingly laserlike with respect to that variable. When r approaches zero, the phases are dispersed or cancel one another.

r is not generally the literal fraction of people in step. Two equally sized, internally synchronized clusters in opposite phases can cancel to $r = 0$. Likewise, a clockwork system can have high synchrony at handoff points, and a low r does not by itself establish division of labour. Use r only after defining a meaningful phase, direction, rhythm, or other alignment variable and an observation window.

Two research examples sharpen this boundary. Lee, Kuklinski, and Timme’s “Extreme synchronization transitions” (2025) shows analytically and numerically that complexified Kuramoto systems can jump from an incoherent state with order of $O(N^{-1/2})$ to r very close to one immediately after a critical coupling strength is crossed, even for systems as small as $N = 8$. The result makes threshold sensitivity a serious monitoring problem, but it is a result about coupled oscillator models, not a demonstration that a small change in social coupling will drive any human crowd into an all-laser state. The authors’ analysis was motivated by earlier experiments on coupled chemical oscillators; the 2025 paper itself is not a human-crowd experiment or a feedback-controller trial.

At the animal scale, Amichay, Li, Nagy, Couzin, and colleagues (2024) used open- and closed-loop virtual reality to manipulate temporal interaction between juvenile zebrafish. They found a stable alternating, out-of-phase pattern for which reciprocal feedback was necessary and sufficient in their model and experiments, and which improved responsiveness to a partner’s movement. This is a concrete **dynamical social clamp** and a reminder that useful coordination need not be in-phase: a global in-phase r can miss an organized alternating relation.

Functional coupling F: the dependency gauge Functional coupling asks how much participants’ contributions depend upon, constrain, hand off to, or alter one another in producing a result. No single universal F is assumed. A concrete study might use a dependency graph, information-flow measure, role-removal test, intervention, or performance loss after disrupting a handoff.

This is the quantity required by the sentence “How much do people’s outputs depend on each other to advance the same goal?” MSE cannot answer that question. A pit crew can have high F ; independent forecasters combined by an external aggregator can have low contributor-level F even when the aggregate performs well.

Task error E: are we doing the job well? A task-specific error measure asks how far an output is from a defined target. If people provide estimates $x_1, \dots, x_N$ of a true value y , distinguish:

$$E_c = (\bar{x} - y)^2, \quad D = \frac{1}{N} \sum_i (x_i - \bar{x})^2, \quad E_i = \frac{1}{N} \sum_i (x_i - y)^2 = E_c + D.$$

Here E_c is the collective error of the aggregate estimate, D is group diversity, and E_i is average individual error. Averaging collective squared error over repeated tasks produces a collective MSE. Low collective MSE means that the aggregate is accurate for those tasks. Calling the crowd **wise** additionally invokes the Wisdom-of-Crowds pattern: dispersed, approximately unbiased individual errors cancel so that the aggregate outperforms typical individuals.

The target, output, aggregation rule, unit of error, and task population must be specified. A random crowd with no shared estimative task has no task MSE; the quantity is undefined rather than necessarily high. MSE measures performance, not functional coupling.

Lorenz, Rauhut, Schweitzer, and Helbing (2011) found that mild social influence in their estimation tasks reduced diversity without improving collective error and increased confidence despite the lack of improved accuracy. The study did not measure Kuramoto synchrony and does not establish a general law that high r causes high MSE. As copying increases, error may rise, remain unchanged, or fall, depending upon the quality and independence of what is copied. The supported warning is that diversity can shrink and confidence grow without an accuracy gain.

Alex Pentland's "[Social Dynamics: Signals and Behavior](#)" reports that nonlinguistic social signals can be as important as linguistic content for predicting some outcomes, and discusses thin-slice studies accounting for about one third of outcome variance and roughly 70 percent binary accuracy in some settings, with larger task-specific correlations in some negotiation and network analyses. Pentland's reported r values are ordinary correlation coefficients, not the Kuramoto order parameter. Specific values near 0.90 concern particular interaction transitions or the relation between engagement and network centrality; they do not establish that social signals explain 80–90 percent of productivity or creativity in general. The paper also describes real-time signal measurement and an experimental wearable feedback meter, which are possible sensor components of a coupling thermostat rather than the completed system.

These measures are optional empirical tools, not definitions of the crowd modes. A specialist study may need separate measurements for synchrony, functional interdependence, diversity, accuracy, confidence, and common-source dependence. That refinement qualifies rather than replaces the chosen continuum.

4.8 Durkheim's solidarities and the crowd modes

Status: Durkheimian concepts retained; correspondence proposed by this project

Primary theoretical home: [Epistemic Agency under Mechanical Solidarity](#), "[Mechanical solidarity](#)"

Explanatory target: Relations among shared moral coherence, differentiated interdependence, and collective synchronization

Construct	Role	Typed relation
Local bigOthers	Interacting classifiers, receivers, and transmitters	Units whose reciprocal signals can align
Master signifier / S1	Compressed symbolic operator or mode selector	Can direct attention and alignment
Laser synchronization	Dynamic alignment of attention, affect, interpretation, timing, or action	Can produce or renew mechanical solidarity
Collective effervescence	Intensified ritual or assembly state	Durkheimian experience that resembles a laser moment
Mechanical solidarity	Cohesion through shared classifications and sentiments	Social field supported or renewed by alignment
Magnetization	Durable alignment, domains, and remanence	Illustrates persistence after the laser moment
Clockwork coordination	Differentiated contributions routed toward a common result	Crowd-mode analogue of functional division of labour
Organic solidarity	Cohesion through differentiated interdependence	Sociological structure that resembles clockwork organization
Lifted mechanical solidarity	Shared rules generating, allocating, and correcting differentiated outputs	Can supply the moral and constitutional protocol enabling the clockwork system
Multi-mind-self	Collective agent above an integration threshold	Possible result, not automatic consequence, of a sufficiently integrated field
Coupling thermostat	Task-sensitive calibration of common orientation, synchrony, and independent judgment	Regulates movement or combination among modes without defining the solidarities or the agent

Durkheim's [De la division du travail social \(1893\)](#) supplies mechanical and organic solidarity. His [Les formes élémentaires de la vie religieuse \(1912\)](#) describes assemblies in which a "sort of electricity" forms, sentiments echo and amplify, and movements become rhythmic and unified; the English translation also calls religious technique a "sort of mystic mechanics." This is a close source neighbor to the laser moment, not a laser theory.

Legal provenance without etymological reduction The legal ancestry of *solidarity* is analytically useful but must not be turned into its exclusive definition. The [CNRTL history of *solidaire*](#) traces the word through the legal expression *in solidum*: an obligation under which each liable party can answer for the whole. The [CNRTL history of *solidarité*](#) records both that juridical relation and later senses of mutual dependence and shared responsibility.

This provenance makes **corporate implication** or **whole-obligation solidarity** a useful semantic layer in cases involving joint liability, collective honour, blood debt, national sacrifice, or property held by one continuing group. It prompts the question whether an individual merely sympathizes with others or is treated as answerable through the obligation of the whole.

It does not follow that every Durkheimian use of solidarity means joint legal liability, that benevolent feeling is excluded, or that etymology fixes later sociological meaning. Durkheim uses law as an observable index of forms of social solidarity in *De la division du travail social*, but mechanical and organic solidarity remain sociological relations rather than mere restatements of *in solidum*. The legal layer should therefore sharpen corporate-liability cases without redefining the full theory.

The project-developed correspondence is:

mechanical solidarity ↔ laser synchronization
organic solidarity ↔ clockwork coordination

The symbols mean **resembles or characteristically affiliates with**, not **is identical to**. Mechanical solidarity is a form of cohesion; laser synchronization is a process. Organic solidarity is cohesion arising through differentiated interdependence; clockwork coordination is an organizational mode. Both solidarities can coexist, and a magnetized mechanically solidary field can persist without an active laser episode.

The strongest dynamic synthesis is:

The laser moment periodically regenerates the moral protocol used by the clockwork system.

laser synchronization / collective effervescence
↓ renews
mechanically solidary moral protocol
↓ enables and legitimates
organic differentiation / clockwork coordination
↓ disperses people into specialized activity
ritual or crisis periodically gathers them again
○

This explains why a differentiated society can still require shared symbols, constitutional rules, trust, and moral commitment. Organic interdependence routes the work; it does not by itself explain why differentiated participants recognize one another as members of one legitimate order.

4.9 The coupling thermostat

Status: Project-developed engineering analogy and research programme

Primary theoretical home: *Mythology Construction*, “Coordination, synchronization, and the coupling thermostat”

Explanatory target: Task-sensitive calibration of common orientation, synchrony, independent perception, and correction

too little common meaning
→ fragmentation and inability to act together

too much synchronization
→ conformity, common-mode error, and loss of correction

viable coupling
→ sufficient common orientation for cooperation
+ sufficient independence for perception and learning

Useful inference: Collective design should ask what must be shared, what must remain independent, how quickly signals should propagate, and which feedback route can correct a common error. A group may need to move temporarily toward laser coherence and then return to clockwork differentiation.

An operational thermostat would require at least:

1. **sensors** for task-relevant states such as S, F, E, diversity, confidence, or common-source dependence;
2. a task-specific **target range**, not one universally optimal synchrony level;
3. an **actuator**, such as changing information visibility, timing, group composition, or the availability of an independent counter-idea;

4. a **controller** connecting observed state to intervention;
5. evaluation of stability, accuracy, displacement effects, and unintended feedback;
6. constitutional limits on who selects the target, operates the controller, and remains able to inspect, contest, or stop it.

Real-time social-signal meters and platform interventions supply possible pieces. They do not yet establish a validated, task-general, ethically legitimate coupling thermostat.

Research neighbors: components, precedents, and limits The coupling thermostat is a synthesis proposed by this project, but the research programme is not isolated. Neighboring work supplies models, measurable parameters, causal testbeds, operational precedents, AI-mediated interventions, and evaluation methods. These contributions must be distinguished by evidential kind:

Research line	Thermostat-relevant contribution	Status and boundary
Bak-Coleman et al., “Stewardship of global collective behavior” (2021)	Treats communication technology as a modifier of global information flow and calls for models, measurement, policy, and ethical stewardship	Perspective and research agenda; it does not specify or validate one quantitative controller
Santa Fe Institute, “Emergent Engineering”	Proposes minimal mechanisms—including signals, policies, platforms, algorithms, and social structures—that coordinate with adaptive systems rather than attempting to specify the whole system from above	Institutional research programme and design framework; it is the closest explicit SFI design relative, but it neither uses coupling thermostat nor supplies one common sensing and control law
Galesic et al., “Beyond collective intelligence: Collective adaptation” (2023)	Models collective trajectories through co-evolving social-integration strategies, network structures, and changing problem structures; highlights exploration–exploitation, path dependence, communication constraints, and meta-level switching	Interdisciplinary review and conceptual framework; it explicitly resists one fixed optimum for every problem
Lee, Krakauer, and Flack, “Constructing stability: optimal learning in noisy ecological niches” (2024)	Derives a scaling relation in which an organism’s learning rate should vary with the square root of environmental change and examines how niche construction changes environmental timescales	Mathematical organism–environment adaptation model; useful for the distant idea that controller timescales must match environmental timescales, not evidence about interpersonal coupling or crowd synchronization
Galesic et al., “Integrating social and cognitive aspects of belief dynamics” (2021)	Makes model knobs visible: relative weight on social versus individual dissonance, inverse noise or attention, integration rule, homophily, and network structure can yield consensus, polarization, or clustering	Quantitative framework with simulations and illustrative empirical fits; an estimable model parameter is not automatically a legitimate or practically manipulable policy lever
Sowinski, Frank, and Ghoshal, “Information-theoretic description of a feedback-control Kuramoto model” (2024)	Models a control process that uses information about a Kuramoto environment to maintain desynchronization and analyzes the agent–environment channel through semantic information theory	Genuine feedback-control model inspired by neural dynamics of epileptic seizures; not a human-crowd experiment, diversity controller, or demonstration of an intermediate social optimum

Research line	Thermostat-relevant contribution	Status and boundary
Lee, Kuklinski, and Timme (2025)	Relates coupling strength to abrupt near-maximal phase order and shows that extreme transitions can occur in small finite oscillator systems	Analytical and numerical nonlinear dynamics; not a human-crowd result, adaptive-network controller, or new laboratory demonstration by those authors
Hébert-Dufresne et al., “Self-reinforcing cascades” (2025)	Lets transmission intensity change as a cascade spreads and finds critical-like cascade-size behavior across a range of parameters rather than only at one fine-tuned point	Published mathematical spreading model; it identifies a hazard and monitoring problem, not a tested social actuator
Daniels, Krakauer, and Flack, “Control of critical behavior in a small-scale social system” (2017)	Uses captive macaque conflict data and empirically grounded models to quantify distance from criticality and shows how heterogeneous participation and third-party policing can modulate it	Animal social-system data plus parameterized equilibrium and branching-process models; a strong precedent for endogenous coupling control, but not an experimental human controller or a Kuramoto result
Helbing, Johansson, and Al-Abideen, “The Dynamics of Crowd Disasters” (2007) and its ETH supporting record	Uses video-derived density and velocity variation to diagnose transitions from laminar to stop-and-go and turbulent flow; the 2006 Hajj response used one-way routes, flexible rerouting, scheduled flows, access points, checkpoints, and cameras	A concrete crowd-safety monitoring and intervention precedent; its crowd-pressure measure is not Kuramoto τ , and the cited record does not report a 2024 deployment or 17 percent reduction
Amichay et al. (2024)	Uses interactive virtual conspecifics in open and closed loops to perturb reciprocity and identify a causal rule for temporal coupling	Laboratory causal testbed in zebrafish pairs; not a validated human-group or platform controller
Kehler, Page, Pentland, Reeves, and Brown, “Generative Collective Intelligence” (2025)	Proposes AI as both participant and collaborative orchestrator: compare alternatives, connect disparate perspectives, preserve exploration, expose tensions, and resist premature consensus	Preprint architecture and research agenda with illustrative applications; it does not yet establish deployed LLM “idea mutators” between human clusters
MIT Center for Collective Intelligence research and Vaccaro, Almaatouq, and Malone’s meta-analysis (2024)	Supplies human-AI task-allocation experiments and insists on comparison with human-only and AI-only baselines	Across 106 experiments, combinations were on average worse than the better standalone performer, with strong task dependence; this makes evaluation and role allocation parts of the thermostat rather than assumed benefits
Burton et al., “How large language models can reshape collective intelligence” (2024), including Max Planck Center for Humans and Machines researchers	Identifies possible gains in access, deliberation, and idea generation alongside risks of knowledge homogenization, false consensus, and marginalized minority information; recommends transparency, audits, and monitoring	Scholarly perspective and policy agenda; it is not evidence of a completed multiscale social-neural controller

This landscape changes the appropriate conclusion. Components of a thermostat are already real: physical crowd flows have been monitored and rerouted; animal social feedback has been experimentally clamped; endogenous policing has been modeled as a control on social criticality; oscillator feedback controllers have been formalized; belief and transition models expose candidate parameters; and human-AI arrangements can be experimentally compared. SFI’s Emergent Engineering also supplies an explicit design family for minimal interventions in adaptive systems. The optimal-learning result adds a more distant warning that an actuator and its memory may need to

match the timescale of what they track. What remains unestablished is their integration into one task-general controller that can infer the right social target, transfer safely across domains, and govern its own authority.

Non-inference: The metaphor is not the name of an established device, Santa Fe Institute framework, or shared programme of the cited researchers. The sources do not document a universal τ , a common control law across oscillator, animal, pedestrian, belief, and institutional systems, or an AI authorized to steer whole populations. They also do not answer the constitutional question of who may choose the objective and intervene. The present theory synthesizes neighboring mechanisms under the **coupling thermostat** name and therefore owns the burden of showing where transfer among domains is valid.

4.10 Positive feedback, noise, and rival signals

Status: Physical heuristic with a qualified social translation
Primary theoretical homes: *Culture Mechanics*, “What the theory is disentangling” and *Mythology Construction*, “Mythological replacement”

The originating heuristic is:

positive feedback + noise suppression → long-range order

Hébert-Dufresne, Lovato, Burgio, Gleeson, Redner, and Krapivsky’s “Self-reinforcing cascades” (2025) adds a useful dynamic warning. In their spreading model, the transmissibility or intensity of a belief, idea, innovation, or product can change as it spreads. Self-reinforcement generates critical-like cascade-size distributions over a broad parameter region rather than only at one fine-tuned critical point. A coupling monitor may therefore need to estimate how the transmission process itself is changing, not merely count current adopters or assume a fixed reproduction mechanism. The model neither identifies every large social cascade as self-reinforcing nor prescribes a particular intervention.

In a physical model, noise can mean random perturbation relative to the variable whose order is being measured. In a society, a counter-narrative is not thereby random noise. It can be:

- a signal from a rival mythology;
- independent evidence from reality;
- an internal corrective mechanism;
- minority perception that detects common-mode error;
- or a source of innovation.

Use **rival-signal suppression** when a program obstructs a competitor’s transmission, and **counter-program suppression** when it attacks the reproduction or institutional embodiment of an incompatible governing program. These terms describe the incumbent’s operation without endorsing its claim that opposition is meaningless noise.

Kenneth Minogue writes that the first move in ideological conflict is to disable the opposition, ideally through censorship, in the preface to the second edition, dated January 2006 (p. xvi), of *Alien Powers: The Pure Theory of Ideology*. *Culture Mechanics* preserves **ideological conflict** as Minogue’s term and translates its organized recruitment-and-suppression pattern as **ideological-form conflict**. The broader condition is **mythological rivalry**; rivalry becomes conflict when participants actively interfere with a rival mythology’s transmission, authority, membership, or institutional embodiment.

4.11 Molecular compounds, strong binding, and possible fusion

Status: Project-developed chemical analogy **Primary theoretical homes:** *Culture Mechanics*, “Differentiated unity and subjecthood absorption (fusion)” and *Epistemic Agency under Mechanical Solidarity* **Explanatory target:** Strong relational binding through which a collective can become the more predictive operative unit and can restrict the legitimate independent movement of its members

Chemical picture	Culture-mechanical counterpart
Atoms or reactive components	Persons carrying local bigOthers and practical capacities
Bonding compatibility	Compatible mythological classifications, roles, expectations, and authority relations
Activation energy	Trust, initiation, shared risk, sacrifice, crisis, or incumbent unbraiding required to form a durable relation

Chemical picture	Culture-mechanical counterpart
Catalyst	Leader, ritual, institution, event, or trusted opinion leader that lowers a formation barrier without becoming the whole resulting order
Chemical bond	Durable reciprocal obligation, identification, dependency, and sanction
Compound	Integrated distributed bigOther or, if the functional threshold is passed, a multi-mind-self
Molecular geometry	Roles, communication topology, authority, interfaces, and jurisdiction
Restricted degrees of freedom	Reduced practical or legitimate independent movement under the collective relation
Emergent properties	Collective memory, judgment, ownership, liability, intention, or action not possessed by an isolated participant
Bond-breaking energy	Cost of exit, defection, schism, betrayal, or institutional dissolution
Reaction among compounds	Alliance, merger, feud, war, conversion, fission, or absorption among collective formations

The useful contrast is:

field coupling: A affects B
laser synchronization: A and B align dynamically
molecular binding: A and B become durably integrated constituents of AB,
and AB may become the more predictive operative unit

Useful inference: Ask whether affiliation changes only influence and timing or changes the unit through which memory, liability, ownership, decision, and action are organized. Candidate signatures include threshold-like entry, hysteresis after the forming event, sharply increased exit costs, substitution among members as role-bearers, persistence through carrier turnover, collective-level prediction outperforming isolated-person prediction, and capacities appearing only after relational integration.

The analogy is strongest for subjecthood-absorptive formations such as a feud clan that owns blood debt through substitutable members, a jealous cult that denies legitimate exit, or a totalizing ideological collective that treats persons as organs. It can also illuminate differentiated organization if the “bond” preserves personal and subordinate jurisdiction. A compound is therefore not synonymous with fusion: the evidence must still establish whether persons retain legitimate judgment, conscience, property, relationship, refusal, appeal, and exit.

Non-inference: People are not presocial pure elements. Social bonds have no literal energy measured in joules, leaders are not chemical catalysts, and collective action does not establish one phenomenal consciousness. Atoms do not interpret, resist, conceal, renegotiate, or bear moral responsibility; people do. The analogy neither makes bond formation irreversible nor removes individual responsibility for conduct performed through a collective. It also does not create a necessary sequence from influence through synchrony and binding to fusion. A multi-mind-self can arise through differentiated clockwork organization, and a strongly bonded group can remain below the collective-agent threshold.

4.12 Resonance catastrophe (*Resonanzkatastrophe*)

Status: Project-developed physical analogy preserving an originating German formulation **Primary theoretical homes:** This inventory for the analogy; *Mythology Construction* for receiver fit, embodiment, feedback, and reality coupling **Explanatory target:** A prepared social medium entering nonlinear, self-amplifying coherence that produces macroscopic institutional rupture or reorganization

A **resonance catastrophe (*Resonanzkatastrophe*)** is not merely a severe event. The candidate case should show evidence for the following conjunction:

1. **Receiver preparation:** prior mythology, grievances, aspirations, dispositions, institutions, or practical experience create susceptibility to selected signals.

2. **Recurrent mode selection:** speeches, print, ritual, symbols, slogans, authoritative classifications, or exemplary acts repeatedly select compatible interpretations and responses.
3. **Reciprocal feedback:** participants do not merely receive one common cause; visible response, imitation, expectation, sanction, and institutional action increase subsequent input.
4. **Coherence and common knowledge:** attention, affect, judgment, sacredness, or action become mutually legible enough for participants to condition their behaviour on one another.
5. **Nonlinear amplification:** the growth, intensity, or reach cannot be reconstructed as a simple sum of independent inputs; crossing a threshold changes the system's effective gain.
6. **Macroscopic rupture or reorganization:** law, office, property, violence, membership, public ritual, jurisdiction, or institutional succession changes at a scale disproportionate to any isolated signal.

Persistence, remanence, diffusion, and counter-signal suppression strengthen the diagnosis but are not necessary in every case. *Catastrophe* first names the dynamical amplitude and rupture, not a complete moral verdict. A reality-coupled constitutional transformation and a destructive terror can both be large resonance events while differing radically in purpose, jurisdiction, corrigibility, fusion, and consequence.

This definition distinguishes neighbouring cases:

- a **severe crisis** can cause enormous damage without reciprocal cultural amplification;
- a **revolution** can replace institutions through military defeat, elite seizure, or material collapse without the proposed resonance mechanism;
- **collective effervescence** can produce intense sacred synchrony without catastrophic institutional reorganization;
- a **media cascade** can spread rapidly without receiver-specific mode selection, nonlinear feedback, or durable rupture.

Émile Durkheim's "[Les principes de 1789 et la sociologie](#)" describes the revolutionary principles as "articles of faith" and as a religion with martyrs and apostles that "profoundly moved the masses." He also links their authority to national aspirations and their persistence to structural change in European societies. This supplies situated testimony for receiver preparation, sacralization, mass activation, and remanence. It does not establish recurrent media feedback, a nonlinear threshold, historical priority, the local-bigOther mechanism, or the comparative distinctiveness of 1789.

Possible tests: Reconstruct signal frequency, recurrence, network reach, visible peer response, ritual synchronization, sacred language, rival-signal suppression, participation, timing of institutional change, and persistence. Compare the event with matched crises and precursor movements. The diagnosis is weakened if amplification tracks only fiscal collapse, war, coercion, material interest, elite organization, or independent individual incentives; if feedback adds no explanatory power; if similarly prepared and unprepared receivers respond alike; or if no threshold-like change or macroscopic reorganization can be found.

5. Braiding and replacement models

5.1 The operative braid

Status: Project-developed craft analogy

Primary theoretical home: [Mythology Construction](#), "[Mythological replacement](#)"

Explanatory target: Durability and replacement of one operative mythological weave

A single strand may be weak. Cross-bindings make the whole durable and redundant: a historical story supports a moral judgment; the judgment honors an identity; the identity performs a ritual; the ritual authorizes an institution; and the institution makes the story visible again.

Useful inference: Refuting one proposition may leave the weave operative. Replacement requires finding load-bearing bindings, preserving recoverable strands, weakening false connections, maintaining a bridge through the

liminal interval, and establishing a successor in roles, rituals, and institutions.

Non-inference: The braid does not require cultural purity, complete logical consistency, intentional design, or the erasure of every incumbent word and practice.

5.2 Tangled cables and spaghetti code

Status: Project-developed diagnostic analogy

Explanatory target: Uninspectable or incompletely replaced programming

Fragments of injunction, fear, desire, memory, borrowed language, and incompatible authority can form a Gordian knot or spaghetti code in the co-processor. The image describes relations that are difficult to trace, debug, or deliberately revise.

Useful inference: Contradiction during transition can indicate incomplete unbraiding and rebraiding within one operative lens rather than several stable bigOthers simultaneously controlling the person.

Non-inference: Complexity is not itself pathology. A braid can be complex and plural while remaining inspectable; a simple program can be closed and destructive.

5.3 Apologetic maintenance and polemical unbraiding

Status: Established words with project-specific operational definitions

Primary theoretical home: *Mythology Construction*, “*Mythological replacement*”

- **Mythological apologetics** defends, explains, repairs, and renews an operative braid.
- **Mythological polemics** attacks and unbraids a rival braid by separating associations, exposing false causal links, contesting permissions, and withdrawing authority.

Useful inference: Construction and destruction are linked. Polemics that removes an incumbent without a reality-coupled successor can produce cynicism, anomie, or capture by a worse first-order program. Apologetics that blocks every correction preserves a braid by severing its reality interface.

Non-inference: Rivalry is not automatically pathological, apologetics is not automatically truthful, and polemics is not automatically emancipatory. Evaluate the successor’s jurisdiction, corrigibility, evidence routes, exit, and treatment of persons.

6. Index of local analogies

Local analogy	Primary home	Intended inference	Main non-inference
Dead/alive rule and <i>Beseelung</i>	<i>Culture Mechanics</i>	Distinguishes information merely known from programming affectively alive in conduct	Not a supernatural soul or a scale of truth
Jealous lover	<i>Culture Mechanics</i>	Makes exclusive allegiance and treatment of exit as betrayal vivid	Single-slot occupancy alone is not jealousy
Moral taste	<i>Mythology Construction</i>	Culture educates attraction and aversion, not only explicit rules	Moral judgment is not literally gustation or beyond reflection
Psychological alchemy	<i>Mythology Construction</i>	Mythology can transform shame, resentment, fear, and aspiration into a new drive direction	No magical transmutation or guarantee of flourishing

Local analogy	Primary home	Intended inference	Main non-inference
Cultural interoperability breakdown (Babelization)	<i>Mythology Construction</i>	When effective lifted-solidarity thickness or span falls below the anti-Babel floor, differentiated groups can retain local coherence while translation, legitimate common procedure, and society-wide agency fail	Linguistic or first-order diversity is not the pathology; the Tower of Babel does not prove the mechanism or make interoperability identical to fusion
Orchestra	<i>Mythology Construction</i>	Differentiated roles can become temporarily synchronized under a common score	Coordination and synchronization never become literal opposites in all tasks
Addiction and downhill attractor	<i>Mythology Construction</i>	Immediate reward and reduced agency can create self-reinforcing cultural descent	A culture or person is not clinically diagnosed by analogy alone
Hairworm and wood cricket	<i>Mythology Construction</i>	A destructive program can redirect a host's action against the host's flourishing	Mythology is not a biological parasite and people are not mindless hosts
Hardware/software fit	<i>Mythology Construction</i>	The same imported operation may function differently under different dispositions and installed state	Genetic incapacity or deterministic population essence is not established
Cynicism as corrosive acid	<i>Mythology Construction</i>	Polemics can dissolve trust faster than a successor order can form	Criticism or skepticism is not inherently corrosive
Collective process as compound interest	<i>Mythology Construction</i>	Small reality-coupled practices can accumulate while dramatic mythology wins immediate attention	Social change does not follow a fixed financial growth law

7. Relationships among the models

7.1 Analogies across explanatory levels

The central physical relationship is:

Laser synchronization explains dynamic coherence; magnetization explains durable alignment; clockwork explains differentiated functional coordination.

The wider sequence is:

```

main processor + one local bigOther
    ↓ communicate through
shared symbolic protocol
    ↓ reciprocal signaling can produce
laser synchronization / collective effervescence
    ↓ can generate or renew
mechanical-solidarity coherence
    ↓ can persist as
magnetized domains and remanence
    ↓ can supply a high-level protocol for
organic differentiation / clockwork coordination
    ↓ under sufficient integration may contribute to
multi-mind-self

```

The final arrow is conditional. A mechanically solidary field or synchronized crowd can remain below the collective-agent threshold.

The molecular and resonance-catastrophe models do not extend this diagram into a universal ladder. They answer different questions:

molecular model	→ how strongly are constituents bound, and has the more predictive operative unit changed?
Resonanzkatastrophe	→ has feedback in a prepared medium produced nonlinear macroscopic rupture?

A resonance catastrophe can reorganize a clockwork, laser-like, weakly bonded, or strongly bonded order. Strong binding can arise gradually without a catastrophe. Neither relation establishes fusion or a multi-mind-self without its independent criteria.

The computing and braiding models operate at different explanatory levels:

PCI slot	→ exclusive local evaluator architecture
compatible packages	→ constituents of one operative weave
braid	→ relations making that weave durable
assembly language	→ culturally executable operations within it
shared protocol	→ public form enabling local interoperability
Wi-Fi/repeaters	→ topology and gain of transmission
field	→ emergent network pattern plus back-action
operating system	→ society-wide rules for authority and correction

These models are complementary, not interchangeable. A master signifier can select a laser mode; laser synchrony can renew solidarity; magnetization can stabilize it; lifted solidarity can authorize clockwork differentiation; and the coupling thermostat asks how much alignment a task can use without destroying independent correction.

The cultural-interoperability model adds a second relationship without making it a physical law:

effective meta-order thickness × lifted-solidarity span
↓
effective shared surface
↓ supports
cultural interoperability
↓ above the anti-Babel floor permits
differentiated unity across first-order differences

Cultural interoperability and subjecthood absorption remain independent. A shared field can be interoperable and differentiated, interoperable and absorptive, fragmented into several locally absorptive laser domains, or weakly organized on both axes. Clockwork coordination has an affinity with the first configuration; generalized and jurisdictionalized laser synchronization is a pathway toward the second or third, not a definition of them.

7.2 Cross-theory mappings and interpretive bridges

The following panels are included because comparisons with Julian Jaynes and Joscha Bach clarify relations among homo duplex, bigOther-presence, *Beseelung*, distributed enactment, multi-mind-self agency, and fusion, while Dushan Wegner clarifies relevant structures, compression, recognition cues, and moral mobilization. **These source theories are neighbouring theories, not analogies.** They therefore do not appear as primary entries in the master analogy map. Their presence here records a controlled mapping across models, with the same usefulness and non-inference discipline applied to the analogies proper.

7.3 Jaynes: bicameral mentality as a possible limit regime

Julian Jaynes hypothesized a mentality in which what later people experience as volition could be received as hallucinatory commands attributed to gods, chiefs, or ancestors. The comparison with Culture Mechanics is striking but partial:

Jaynesian concept	Culture Mechanics mapping	Important boundary
Bicameral mentality	A possible highly agentified, command-like operating regime of homo duplex	Not a synonym for homo duplex and not required by the theory
Divine voices issuing commands	Inner cultural programming experienced as bigOther-presence or bigOther-as-Thou	The local bigOther ordinarily need not produce auditory voices
Command not experienced as self-authored	Weak personal authorship, deep capture, or possible subjecthood absorption	Obedience or presence alone does not prove complete fusion
Several gods addressing one person	Several compatible divine agent-models contained within one operative pantheonic weave and activated contextually	This does not require several local bigOthers or violate single-slot exclusivity
Gods coordinating ancient societies	Similar local agent-models helping maintain a distributed bigOther	Shared representations do not by themselves establish a multi-mind-self
Historical emergence of introspective consciousness	A possible cultural change in the authority and continuity of the autobiographical individual self	Jaynes's dating, neurology, philology, and historical scope are not adopted as established fact

The compact interpretation is:

Jaynesian bicameral mentality may be understood as a culturally produced limit regime of homo duplex in which the culturally programmed second side becomes personified, linguistically articulate, and phenomenologically present as one or more gods.

The broader and less historically committed term **bicameral-like enactment** can name this operating possibility without claiming that ancient people universally lacked consciousness or individual minds. The comparison keeps several differences visible: Jaynes proposes a historical stage and a neurological story; Culture Mechanics proposes a continuing functional architecture. Jaynes foregrounds voices; the bigOther normally works through affective valence, salience, obligation, shame, loyalty, sacredness, and intuitive propriety. Jaynes focuses primarily upon intrapersonal experience; Culture Mechanics joins local experience recursively to a distributed field.

A [critical multidisciplinary reappraisal](#) identifies neurological and philological problems while treating the non-unitary self as one important legacy. Ancient texts usually cannot decide whether god-talk records auditory experience, ordinary deliberation expressed through religious convention, ritual language, literary technique, political legitimation, or a mixture.

7.4 Bach: gods and top-level agents implemented across minds

Joscha Bach's 2023 talk "[Synthetic Sentience](#)" supplies the term *multi-mind-self* used by this project and a neighbouring account of selves, gods, and top-level agents enacted across human minds. Culture Mechanics makes the mapping more explicit:

Bachian concept	Culture Mechanics mapping	Important boundary
Agent-model installed in a mind	Mythological programming executed by the local bigOther	The local bigOther is the processor; the god-model is part of its operative lens
God as a multi-mind-self implemented across minds	A distributed bigOther crossing the threshold into collective perception, memory, judgment, intention, ownership, and action	Not every shared god-representation or devotional crowd reaches that threshold
Religious policies organizing participants	Mythologies and cultural strategies programming local bigOthers	Religious doctrine is not reducible to social control or synchronization

Bachian concept	Culture Mechanics mapping	Important boundary
Collectively enacted top-level agent	A network-level subject implemented through differentiated biological persons	Distributed implementation can preserve personal authorship and does not necessarily imply total fusion
Alignment of human agents	Coupling, synchronization, compatible programming, and collective agency	Alignment is not one scalar and does not establish truth, goodness, jurisdiction, corrigibility, or fusion
Loss and reinvention of collective agency	Cultural machinery can remain latent, deteriorate into dead rules, disappear, or be reconstructed	This historical possibility is a Culture Mechanics hypothesis, not something established by Bach's model alone

The theological and metaphysical boundary is decisive:

Culture Mechanics can examine how human representations of God are installed, experienced, communicated, and collectively enacted without deciding whether God exists independently of those human implementations.

A god represented by a distributed system could acquire functional capacities in the following ways:

Function attributed to the god	Possible distributed implementation
Perception	Adherents observe and communicate what concerns the god
Memory	Myth, scripture, liturgy, tradition, monuments, priesthood, and institutional records
Judgment	Compatible local bigOthers classify conduct under the god's represented values
Speech	Oracles, prophets, priests, councils, texts, conscience, and collective acclamation
Intention	Ritual and institutional procedures determine what the god is understood to require
Ownership	Temples, sacred land, offerings, institutions, and common objects are treated as belonging to the god
Action	Adherents coordinate bodies and resources in the god's name
Continuity	New adherents learn and execute the mythology as biological carriers change

This is more than several people privately entertaining the same proposition if the organized relation actually remembers, judges, owns, and acts. It can remain differentiated. It becomes fused when the collective god displaces persons as independently legitimate authors.

7.5 The Jaynes–Bach–Culture Mechanics bridge

The three accounts illuminate different levels of one possible process:

Level	Principal contribution
Jaynes	How might a culturally generated command be experienced locally as the voice and will of a god?
Bach	How might the same god-agent be implemented across several people as a multi-mind-self?
Culture Mechanics	What functional architecture might connect mythological programming, local experience, reciprocal enactment, distributed agency, and possible fusion?

Level	Principal contribution
Beseelung	When is the mythology or agent-model affectively alive and conduct-directing?
bigOther-presence / bigOther-as-Thou	How is the represented agent experienced as objectively or relationally present?
Multi-mind-self	When does the distributed system acquire sufficiently integrated and continuing or episode-bounded collective agency?
Fusion	When does the collectively enacted self displace participating persons as independently legitimate authors?

The resulting recursive picture is:

shared mythology of a god
→ god-agent represented in local mythological lenses
→ presence as Thou and agentified Beseelung
→ coordinated enactment through several persons
→ distributed bigOther
→ possible god-as-multi-mind-self
→ social confirmation of the god's local presence

The enactment-depth relation is:

representation
→ consultation or service
→ bigOther-presence / bigOther-as-Thou
→ distributed enactment
→ collective agency
→ possible subjecthood absorption
→ possible total fusion

This is not a necessary ladder. Presence can occur without collective agency; collective enactment can remain person-preserving; and fusion can be partial, temporal, or jurisdictionally bounded. The name of the represented collective subject—God, Nation, History, Class, Party, Humanity, or Collective—does not alter the structural test for fusion.

Licensed inference: Jaynes and Bach can generate hypotheses about agentified cultural programming, distributed enactment, episodic activation, and the relation between local experience and collective agency.

Unlicensed inference: The family resemblance does not validate the local-bigOther architecture, prove Jaynes's history of consciousness, establish that theological beings are human artifacts, or show that every religion, ritual, shared intention, or synchronized group forms a multi-mind-self.

7.6 Wegner: relevant structures, compression, moral mobilization, and political authorization

Dushan Wegner's *Relevante Strukturen* (2019; ISBN 9783739405636) and the official page for [Talking Points](#) are neighbouring source materials, not analogies and not empirical validation of Culture Mechanics. This panel preserves his language while showing where the present theory adopts, operationalizes, narrows, or declines it.

Wegner formulation	Culture Mechanics use	Source boundary
"Alles ist Formel"	Typed reconstruction into physical configuration, relational structure, representation, process, symbol, mapping, execution, or identity-bearing process	The reconstruction is the project author's best guess about an unclear and unusually broad vocabulary. It does not claim that Wegner meant computer programs or the substrate-identity stack.

Wegner formulation	Culture Mechanics use	Source boundary
Relevante Strukturen and good/evil as strengthening/weakening them	Relevant structures inside the one mythological lens; relevant-structure appraisal and resonance hypotheses	Retained as an important, non-exclusive account of perceived morality and differential mythology uptake, not a sufficient criterion of moral truth. Actual multidimensional effects, generative centrality, normative standing, jurisdiction, and externalities remain separate.
Veränderung	Change-indexed moral-mobilization hypothesis	Represented continuation, prevention, or omission can mobilize without physical novelty. The hypothesis is not a complete ontology of ethics and the status quo's endurance does not prove approval.
Komprimierung / Dekomprimierung	Audience-modelled reconstruction; decompression audit; lossy codec and decoder-targeted compression analogy	Wegner supplies the source observations about omission, symbols, recipient capability, and intended unfolding. The typed recipient model, adversarial subtype, audit, and analogy names are project developments.
Project bridge prompted by Wegner: sublimation as a compressed symbol for its cultural "machinery"	A cultural sublimation architecture recurrently produces shared sublimations; a sublimation emblem is Wegner-facing shorthand for a carrier that activates the associated installed lens mappings	This is the project author's interpretive extension prompted by Wegner's compression language, not a claim that Wegner explicitly defined sublimation this way. In canonical Culture Mechanics terms, sublimation is a process, the architecture is a structure, and the emblem remains an ideological symbol, activation device, master-signifier-like token, or mythology fragment according to function.
Wie-Was-Manipulation	LT-040 cue-function substitution: recognition cues elicit a category while its constitutive function or consequences are absent or opposed	Cues and proxies are necessary and fallible. Mismatch alone is not proof of intentional manipulation.
Spiegelung and what is placed " vorm Auge "	Mirrored-relevance and foregrounded-relevance hypotheses	These may describe relevance activation through identification or attention; durable relevance reprogramming requires further longitudinal evidence.
"Ethik ist eine Waffe" and Vierschritt der Kontrolle	Relevant-structure-weaponization schema: my side as structural support, rival as damage or tolerated damage	Legitimate moral reasoning also examines effects on valued structures. Weaponization requires separate evidence of fabrication, selective omission, pre-emption, or coercive deployment.

Wegner formulation	Culture Mechanics use	Source boundary
“Denken tut weh”	Cognitive-relief hypothesis for one adoption pathway under complexity, uncertainty, social exposure, and responsibility	Wegner’s grandmother’s phrase is situated testimony, not a prevalence estimate. The mediation model, tests, and falsifier are project-developed and do not classify people by intelligence.
Talking Points maxim: political language should motivate people to entrust their lives to the politician and give the politician power over them	Political language as an authorization bid; authorization-payload audit after PCP: requested power, object, jurisdiction, duration, discretion, oversight, revocation, termination evidence, opponent restrictions, and epistemic spillover	The maxim is Wegner’s and the page explicitly presents <i>Talking Points</i> as a complement to <i>Relevante Strukturen</i> . The authorization-bid translation, typed payload, and audit are Culture Mechanics synthesis; the maxim is not an exhaustive law of every political utterance or a condemnation of legitimate delegation.
Self-image, context-poor dilemmas, and sincere hypocrisy	Pointers to identity-protective cognition, overcompressed problem models, and distributed organized unreality	These are useful comparisons and examples rather than additional foundational constructs at present.
Stability calculus, concentric moral order, ape/philosopher picture, and broad evolutionary or historical assertions	Provenance-only material or future independent research questions	They are not canonical Culture Mechanics constructs. The concentric order is a first-order moral programme; the ape/philosopher picture does not map onto main CPU/local bigOther; historical and evolutionary claims require their own evidence.

The combined bridge is:

```

mythology teaches which relational structures exist and matter
      ↓
a communicator compresses a represented change for an anticipated recipient
      ↓
the recipient reconstructs causal, moral, and authorization models
      ↓
the local bigOther classifies support, damage, loyalty, betrayal, and standing
      ↓
speaker becomes trusted protector; opponent becomes feared, blamed, or resisted
      ↓
attention, following, belief, trust, action, sanction, or delegated power
      ↓
institutions and public signals can reinforce the relevance mapping
      ○

```

The sublimation-specific bridge is:

```

raw drive
  ↓ cultural sublimation architecture
character + capability + relationship + practice
  ↓ represented by a small carrier
"sublimation emblem"
  ↓ Culture Mechanics translation
activation of installed mythologies and lens mappings
  ↓
local-bigOther classification and conduct
  ↓ rival mythology + repeated cultural implementation

```

possible reinforcement or reprogramming of the lens

↓

changed Beseelung, enactment, and transmission

The concrete [work/pause carrier contrast](#) shows why both languages are worth retaining. In the Wegner-facing description, one compressed symbol can be displaced by a counter-symbol and cynical mythology. In canonical Culture Mechanics terms, the intervention attempts to activate, reinforce, and eventually install a contrary classification in the mythological lens. The example is illustrative rather than evidence of invariant meaning or deliberate historical attack.

Licensed inference: Wegner supplies useful language for the moral objects, the represented change, recognition cues, recipient-dependent compression, and practical mobilization that connect the mythological lens to communication and political action. Retaining his vocabulary gives readers a second route into mechanisms also described by causal stories, omission, mental-model reconstruction, authority, need for closure, and systemic lying. The sublimation extension uses that second language to show how a small carrier can represent a much larger formative arrangement while retaining the Culture Mechanics account of programming, activation, reinforcement, reprogramming, and *Beseelung*.

Unlicensed inference: The mapping does not show that all morality is reducible to structural preservation, that all communication is manipulation, that all political authorization is pathological, or that conceptual overlap makes Wegner's formulation redundant. Nor does it turn the project's tentative computer-science interpretation of *Formel* into Wegner's doctrine. It also does not make the symbolic carrier identical with sublimation or its architecture, prove that a changed prestige environment is the primary intrapersonal target, or establish a deliberate cultural attacker from observed de-animation.

8. Boundary conditions and counterexamples

1. **Reflexive nodes:** People can understand, resist, exploit, imitate, conceal, or reorganize the model applied to them. Spins, photons, processors, cables, and radio repeaters do not do this in the same sense.
2. **No proof by resemblance:** A crowd that looks laser-like does not establish a local-bigOther mechanism. A regional boundary does not prove magnetic-domain causation. Evidence must discriminate the proposed mechanism from alternatives.
3. **Mixed modes:** An orchestra, pit crew, military unit, laboratory, or ritual can be differentiated and highly synchronized. The crowd modes are ideal types and task-relative.
4. **Neutral architecture, normative evaluation:** Full slot occupancy, mechanical solidarity, mythological braiding, and synchrony are not inherently pathological. Corrigibility, jurisdiction, reality coupling, exit, and treatment of persons remain separate axes.
5. **Order is not truth:** Long-range coherence can amplify insight or error. Independent information routes and minority perception may be essential.
6. **Order is not agency:** Coherence becomes a multi-mind-self only if the distributed system has sufficient continuity and integration for perception, memory, judgment, intention, ownership, and action.
7. **Statistical scope:** Population-level regularity can coexist with dissent, strategic behavior, heterogeneous susceptibility, and individual exceptions.
8. **Operational burden:** An analogy that proposes a mechanism should eventually identify measurable variables, comparative predictions, thresholds or temporal signatures, and observations that would weaken it.
9. **Interoperability is not fusion:** Shared translation, procedure, and common action do not require the absorption of persons into one collective subject. The anti-Babel floor and subjecthood-absorption axis answer different questions.
10. **The proportionality is provisional:** $I \approx kT_{LS_L}$ is a first-order model. Bottlenecks, weakest-link interfaces, thresholds, saturation, topology, and unequal power may fit observations better than a linear relation.
11. **Activation is not identity:** Similar peak states do not prove that the same collective self persists between them. Records, roles, property, ritual, recognized succession, and reactivation paths carry the identity burden.
12. **A theoretical neighbour is not an analogy or validation:** Jaynes and Bach can clarify local and distributed enactment while their own ontologies, evidence, and historical claims remain independently assessable.
13. **Strong binding is not fusion or agency:** A molecular-style relation can constrain members without displacing all personal standing and can remain below the multi-mind-self threshold.
14. **Catastrophe is not moral condemnation:** *Resonanzkatastrophe* identifies nonlinear amplification and macroscopic rupture. Purpose, truth, proportionality, jurisdiction, corrigibility, fusion, and consequence require separate evaluation.

15. **No universal coupling ladder:** Influence, synchronization, remanence, binding, agency, and fusion can combine in several orders or remain absent. The analogy family is typed, not a necessary developmental sequence.
16. **Compression is not deception:** Every finite message selects and relies on recipient knowledge. The lossy codec picture becomes an adversarial diagnosis only when a materially misleading reconstruction is predictably or systematically induced.
17. **A cue is not its function, but neither is it automatically a counterfeit:** Recognition cues and proxies can be honest, necessary, and corrigible. A Wie-Was diagnosis must inspect actual operation and consequences and then establish manipulation separately.
18. **Interpretive reconstruction is not source attribution:** The typed reconstruction of *Formel* and the Culture Mechanics mechanisms built from Wegner's observations remain project proposals unless the source explicitly supplies them.

9. Open questions and research programme

- Which observable alignment measures best distinguish shared timing, affect, attention, interpretation, judgment, and action?
- When does neighbor influence improve error correction, and when does it create common-source error or confidence without accuracy?
- Can remanence be distinguished empirically from ordinary institutional inertia, habit persistence, or selection of already similar people?
- Do cultural domain walls predict sharper transitions, hysteresis, or path dependence than standard regional clustering accounts?
- Can coercivity, nucleation, domain expansion, and competing magnetization be operationalized without importing irrelevant physical structure?
- Which criteria distinguish a powerful laser crowd from a continuing multi-mind-self?
- Which continuity carriers distinguish an episodic multi-mind-self from several similar but numerically distinct crowd episodes?
- Can agentified Beseelung, bigOther-as-Thou, distributed enactment, and authorial displacement be operationally distinguished rather than inferred from the same religious or political language?
- When does bounded laser synchronization remain person-preserving, and which observable jurisdictional changes mark its generalization into fusion pressure?
- Does cultural interoperability vary approximately with effective shared lifted-solidarity surface, or do bottleneck, threshold, and saturation models predict intergroup coordination better?
- Did the local cultural co-processor develop principally as an adaptation to coordination in small hunter-gatherer bands? This remains an evolutionary hypothesis requiring comparative and developmental evidence.
- Can a legitimate coupling thermostat be built without giving its operator epistemic sovereignty or a covert technology of population control?
- Can purposive mythology construction be distinguished empirically from endogenous cultural selection by evidence of a declared destination, audience diagnosis, controlled variation, feedback, and adaptive revision?
- Which observations distinguish molecular-style binding from ordinary affiliation, repeated coordination, network closure, or costly exit produced by external coercion?
- When does collective-level prediction of memory, liability, ownership, and action outperform an individual or coalition model?
- Can receiver preparation, recurrence, reciprocal feedback, common knowledge, nonlinear gain, and institutional rupture be measured independently enough to discriminate a *Resonanzkatastrophe* from a crisis, revolution, effervescence, or media cascade?
- Can a communicator's predicted audience reconstruction be elicited before exposure and compared with the factual, causal, moral, and authorization models recipients actually construct?
- Under which conditions do foregrounding and mirroring produce only temporary relevance activation, and when does repeated enactment alter durable relevance rankings?
- Does threatened-structure and protector framing increase delegated discretion or jurisdiction beyond its effect on agreement with the underlying proposal?
- When does subjective relief mediate acceptance of a compressed, authority-endorsed formula, and when does good compression instead improve independent checking?
- Which analogies improve prediction and diagnosis beyond ordinary prose, and which remain mnemonic illustrations only?

10. Provenance and attribution summary

- **Émile Durkheim** supplies mechanical and organic solidarity, collective consciousness, collective effervescence, electricity/energy imagery, rhythmic unity, and a social-force lineage. His “[Les principes de 1789 et la sociologie](#)” supplies situated testimony concerning aspirations, articles of faith, revolutionary religion, mass movement, persistence, and structural change. He did not propose lasers, ferromagnetic domains, molecular binding, *Resonanzkatastrophe*, PCI slots, local bigOthers, or clockwork crowds.
- **William James** supplies the image of abstract realities polarizing and magnetizing human life and the felt reality of unseen presences. He did not propose the distributed-field mechanism.
- **Gustave Le Bon** supplies *crowd* as a deliberate lexical reference and used magnetic influence, hypnosis, reciprocity, repetition, and contagion. Culture Mechanics does not adopt his complete crowd psychology.
- **Kenneth Minogue** supplies *ideological conflict* and the observation that disabling opposition, ideally by censorship, is an early ideological move. **Mythological rivalry**, **ideological-form conflict**, and **rival-signal suppression** are project translations.
- **Physics and collective-dynamics sources** establish real phenomena and formal neighbors: quantum measurement and unitary evolution, exchange-supported ferromagnetism, domains, remanence, laser symmetry breaking, astrophysical lasers, and Vicsek-style neighbor alignment. They do not establish the social ontology.
- **Lorenz and colleagues** and **Pentland** supply scoped empirical neighbors concerning social influence, estimate diversity, confidence, and nonlinguistic signals. They do not validate the whole crowd-mode model.
- **Vince Gilligan’s *Pluribus*** and ***Star Trek’s Borg*** supply contrasting fictional total-fusion endpoints. They do not supply empirical evidence or the culture-mechanical mapping from generalized and jurisdictionalized alignment to subjecthood absorption.
- **Joscha Bach’s “[Synthetic Sentience](#)”** supplies the term *multi-mind-self* and a neighbouring distributed-agent account. **Julian Jaynes’s *bicameral-mind hypothesis*** supplies the neighbouring command-voice and historical-consciousness model. Their comparison with homo duplex, *Beseelung*, bigOther-as-Thou, distributed enactment, and fusion is the present project’s mapping, not an analogy offered by Bach or Jaynes and not empirical confirmation of Culture Mechanics.
- **Dushan Wegner’s *Relevante Strukturen*** (2019, ISBN 9783739405636) supplies the source vocabulary of relevant structures, broad *Formel*, linguistic *Komprimierung* und *Dekomprimierung*, *Wie-Was-Manipulation*, *Spiegelung*, foregrounding, change, ethics as a weapon, the *Vierschritt der Kontrolle*, and “Denken tut weh.” His official [Talking Points](#) page supplies the maxim that political language seeks trust and power over people’s lives and describes formulations that generate following, belief, trust, fear, hostility, and opposition. The typed *Formel* reconstruction, named hypotheses, authorization-bid translation, audits, Culture Mechanics architecture, and cross-theory synthesis are project developments.
- **The present project and originating user** supply the Quantum Mechanics of Psychology umbrella, local-bigOther physical mappings, laser/clockwork correspondence, the *Pluribus*–*Borg* architecture/program comparison, detailed ferromagnetic topology, Bavaria–Swabia example, coupling thermostat, sleeping–waking collective-state mapping, one-slot computing family, molecular-compound mapping, resonance-catastrophe definition, lossy codec and decoder-targeted compression analogy, and the cross-model synthesis.

Memetic engineering as a neighbouring control aspiration

The 1996 Wired article “[Memetic Engineering](#)” is a historical popular neighbor, not one of this inventory’s canonical analogies and not empirical evidence for Culture Mechanics. It imagines a future science able to manipulate interacting memes and produce a “precisely altered cultural phenotype,” while explicitly presenting that prospect as conjectural.

The useful cross-theory mapping is limited:

Gardner’s popular memetic picture	Culture Mechanics
Cultural variants arise, replicate, interact, and co-evolve	Endogenous mythology formation and cultural selection can occur without one sovereign author
Replicators may be indifferent to effects on their hosts	Programme replication and carrier flourishing are separate success functions
An engineer deliberately manipulates interacting variants	The prospective purposive-construction branch studies attempts to intervene toward a declared destination (D*)

Gardner's popular memetic picture	Culture Mechanics
A changed cultural phenotype is the output	The installed lens, institutions, conduct, and field are the observed successor, which may diverge from the target

This comparison licenses the carrier–replicator warning and the possibility of reflexive cultural intervention. It does not license the conclusions that consciousness is nothing more than an artifact of selfish memes, that memes are the only causally relevant agents, that mythology exhausts culture implementation, or that the resulting order can be controlled with genetic-engineering precision. Constructors and recipients remain culturally formed agents inside the ecology; systems, institutions, rival fields, unintended consequences, and reality select what survives.

Semantic summary

- **Analogy authority:** This inventory governs mappings and limits; primary semantic documents govern the constructs.
- **Governing maxim:** A model need not be literal to be useful, but usefulness does not constitute empirical validation.
- **Quantum umbrella:** Hidden local cultural processing can become observable as statistical, macroscopic collective order; the relevant scientific family is broader than quantum mechanics.
- **Activation analogy:** Sleeping and waking distinguish viable latency from an active episode, while the analogy fails for de-animated or culturally lost machinery and cannot itself establish collective identity.
- **Physical family:** Field back-action explains reciprocity, laser synchronization dynamic coherence, magnetization durable alignment, and domains persistent boundaries.
- **Chemical binding model:** The molecular-compound analogy asks when durable integration, constrained independent movement, substitution, continuity, and emergent capacities make a collective the more predictive operative unit; it does not itself establish fusion or agency.
- **Resonance-catastrophe model:** Prepared receivers + recurrent mode selection + reciprocal feedback + common knowledge + nonlinear amplification + macroscopic reorganization define a candidate *Resonanzkatastrophe*; moral judgment and historical priority remain separate.
- **Memetic-engineering boundary:** The 1996 popular proposal supplies a neighboring control aspiration and carrier–replicator warning; Culture Mechanics studies endogenous formation while keeping purposive construction open as a prospective research branch, and rejects meme-only ontology and precision-control inference.
- **Crowd family:** Random co-presence, clockwork coordination, and laser synchrony are task-relative ideal types on a simple interaction-strength continuum.
- **Person–collective mapping:** Clockwork coordination has an affinity with differentiated unity; bounded laser synchronization can preserve it; generalized and jurisdictionalized laser synchronization can produce fusion pressure but does not by itself establish subjecthood absorption.
- **Fictional fusion limits:** *Pluribus* and the Borg place different operative evaluative programs in approximately the same absorptive architecture. They clarify the endpoint and the loss of legitimate refusal without establishing a real social mechanism.
- **Interoperability limit:** Effective meta-order thickness and span support a shared lifted-solidarity surface; cultural interoperability breakdown (Babelization) occurs below the anti-Babel floor without implying that local solidarity or slot occupancy disappeared.
- **Durkheim synthesis:** Mechanical solidarity resembles laser synchronization; organic solidarity resembles clockwork coordination; collective effervescence can renew the common moral protocol enabling differentiated work. Durkheim's 1890 revolutionary testimony supports inquiry into preparation, sacralization, mass activation, and remanence without establishing the resonance-catastrophe mechanism.
- **Solidarity provenance:** The legal *in solidum* lineage makes corporate implication and whole-obligation solidarity useful analytical layers, but it neither exhausts later meanings nor redefines Durkheim's sociological solidarities as joint liability.
- **Computing family:** CPU/co-processor, one PCI slot, shared protocol, repeaters, assembly language, and operating system illuminate different levels of the architecture.
- **Communication-codec model:** finite messages are selected against an anticipated recipient codebook and yield reconstructed factual, causal, moral, and authorization models; compression is unavoidable and an adversarial diagnosis requires more than omission alone. “Decoder” is a distributed analogy for ordinary reconstruction plus installed-lens classification, not an additional Culture Mechanics processor.

- **Replacement family:** Braiding explains durability, polemics unbraiding, apologetics maintenance, and successor rebraiding.
- **Jaynes–Bach bridge:** Jaynes maps a possible local experience of divine command; Bach maps distributed god-agent implementation; Culture Mechanics joins these to agentified Beseelung, bigOther-as-Thou, distributed enactment, collective-agent thresholds, and fusion while retaining strict source and metaphysical boundaries.
- **Wegner bridge:** relevant structures, change, compression/decompression, Wie–Was recognition, mirroring, foregrounding, moral weaponization, and cognitive relief provide several source-language views of mechanisms; the *Talking Points* maxim adds the explicit conversion of political trust into power over people’s lives. The project-developed sublimation bridge additionally treats a sublimation emblem as a compressed representative of a cultural sublimation architecture while locating the canonical causal operation in activation, reinforcement, and possible reprogramming of the mythological lens. The Culture Mechanics translations remain typed, bounded, testable, and distinct from Wegner’s unclear *Formel* ontology and unsupported extensions.
- **Conflict translation:** Counter-narratives are not analytically noise. Minoguean ideological conflict maps most directly to ideological-form conflict and rival-signal suppression.
- **Final boundary:** Similarity guides attention and hypothesis formation; it does not erase human reflexivity, establish causation, or license physical identity.
